

# Noah System 4

## Transition from Standalone Platform to Enterprise-Wide Solution

## Hearing Center of Excellence

## NOAH ENTERPRISE DEPLOYMENT

### Site Survey

The HCE sent out a Noah site survey request in May 2022 and again in January 2023. The requested information required back from the sites were to determine the following:

- Noah version installed
- Software modules in use
- Module versions
- Audiology & IT POCs
- Clinic workstation count
- Clinic user count

The HCE is establishing a standard set of software modules based on feedback received from the Audiology community.

## THE FUTURE OF NOAH

The Noah software system allows hearing professionals a central location focused on hearing aid fitting. The system is designed to support hearing software within an integrated framework. The Hearing Center of Excellence (HCE) is working towards an enterprise solution for Audiology clinics across the Department of Defense.

HCE has been granted an Authority to Operate (ATO) for Noah, approved until March of 2025. Noah will deploy via the DHA Software Center as a package that will be made available as each site is migrated to the enterprise version.

Noah is in the final stages of testing and is planned for piloting spring/summer of 2023.

## FREQUENTLY ASKED QUESTIONS

Q: How can my clinic help to migrate to enterprise Noah?

A: Provide accurate and complete information in site surveys (negative responses appreciated).

Q: Will I need to purchase a new Noah license?

A: No, if you currently use Noah, your license will transfer.

Q: Will my current patient information be available when I migrate?

A: Yes, the local Noah database(s) will be transferred over to the centralized server during the migration.

Q: Where can I find the latest information about Noah?

A: <https://www.himsa.com/products/all-about-noah-system-4/>

## IMPACT/BENEFITS

Transitioning from a standalone platform to an enterprise-wide solution with one common database repository provides great outcomes, better care, and satisfied patients.

- ✚ Data integrity is maximized, and redundancy is minimized.
- ✚ Standardized approach assists in decreasing variation and fosters an environment of quality patient care, enhancing the hearing health of our Service members and Veterans.
- ✚ Increased cybersecurity posture of the system to identify and manage potential risks and vulnerabilities.
