

# UNDERSTANDING YOUR HEARING TEST RESULTS

Understanding your hearing test results is easy. The below audiogram shows both normal hearing and a typical moderate high frequency noise-induced hearing loss graphed.

AUDIOMETRIC DATA  
RE: ANSI 23.6 - 1989  
FREQUENCY (Hz)

LEFT							RIGHT						
500	1000	2000	3000	4000	6000	8000	500	1000	2000	3000	4000	6000	8000
25	20	30	50	65	50	30	15	15	25	55	60	55	30
10	5	10	10	15	15	15	5	10	5	15	15	10	10

Below are your current hearing thresholds plotted on the audiogram. This can assist you with understanding where your hearing lies in the spectrum from normal to abnormal hearing. It also depicts what sounds you may have difficulty hearing if your threshold results are plotted below certain speech sounds (see the 'Speech Banana' in the audiogram).
