

FOIA 10004

Unduplicated total number of unique military beneficiaries age 21 and younger with a diagnosis of an autism spectrum disorder per the following codes: Autism - 29900 & 29901; Unspecified Pervasive Developmental Disorder - 29990 & 29991; Asperger's Disorder - 29980 & 29981; Childhood Disintegrative Disorder - 29910 & 29911; and Rett's Syndrome - 3308, broken down by sponsor's duty status on December 31, 2008 (i.e. active duty, retiree, survivor, inactive guard reserve, and active guard reserve). To ensure that the total population reflects the most accurate possible picture, I would like the data across a four year calendar period from 2005 through 2008. The totals must be unduplicated within each year and across the entire time period to ensure that each beneficiary is only counted once within this 48 month time period. This is necessary since not all beneficiaries may receive medical services under one of these diagnosis codes within each year.

TABLE 10004-1
