

FACT SHEET

JMAR

TOTAL ASSET MEDICAL VISIBILITY

The Joint Medical Asset Repository (JMAR) is an information system within the Defense Medical Logistics - Enterprise Solution (DML-ES) portfolio. The DML-ES portfolio provides a continuum of medical logistics support for the Defense Health Agency (DHA). JMAR is a 24/7 web application supporting total visibility of medical assets.

JMAR is the DML-ES Business Intelligence (BI) and Decision Support (DS) component. JMAR is a web-enabled repository that captures inventory and transactions from distributed medical logistics systems at over 400 locations and provides flexible reporting on materiel inventory, status, movement and location. JMAR is a key source of data used for DHA Performance Metrics. JMAR provides external data interfaces to facilitate critical logistics programs. JMAR is designated as the authoritative source for aggregated medical logistics data provided to the Department of Defense (DoD) Asset Visibility program. Utilization of the Medical Master Catalog (MMC) data allows JMAR to provide clinical views of logistics inventory.

Background:

While JMAR continues to provide excellent medical logistics asset visibility and analytics support, it is currently being transitioned to LogiCole with full operational capability by 2020.

SDD is a component of DHA DAD IO (J-6). For more information, visit www.health.mil/SDD. To subscribe for SDD product news, please visit <https://public.govdelivery.com/accounts/USMHS DHSS/subscriber/new>.

Key Features

- ▶ Provides secure and timely data on the location, movement, status and identity of medical materiel
- ▶ Provides historical trending and analysis of metrics and transactions to enable predictive forecasting and data-driven decisions

Key Benefits

- ▶ Acts as authoritative source for aggregated medical logistics data to support DoD asset visibility
- ▶ Offers Program Readiness Dashboard and Assemblage Readiness Dashboard to monitor materiel readiness and quality assurance indicators for contingency and disaster response programs
- ▶ Provides data through interfaces to support key enterprise activities and capabilities
- ▶ Provides front-end business intelligence and decision support
 - Critical equipment and maintenance reporting and dashboards
 - Enterprise metrics
