# JOINT OPERATIONAL MEDICINE INFORMATION SYSTEMS MEDICAL SITUATIONAL AWARENESS IN THE THEATER

Medical Situational Awareness in the Theater is managed by the Joint Operational Medicine Information Systems Program Management Office, under the Program Executive Office, Defense Healthcare Management Systems.

## MSAT OVERVIEW

Medical Situational Awareness in the Theater (MSAT) is a web-based application on the Secret Internet Protocol Router Network (SIPRNet) that combines data from multiple sources, providing a common operating picture and decision support for deployed medical forces. MSAT is the Medical Command and Control component of the Theater Medical Information Program-Joint (TMIP-J) systems.

MSAT provides theater-wide situational awareness to the combatant command surgeons and staff. This information allows users to balance resources based on demand, trends, mission degradation, and other issues impacting patient care and movement, operational readiness, and force health protection. MSAT's medical status reporting reflects the operational readiness of unit equipment, supplies, and personnel. It also presents a commander's assessment of the unit's current operational capabilities and their forecast for the next 72 hours.

To request information about MSAT training, send an email to [dha.ncr.health-it.mbx.jomis-training@mail.mil](mailto:dha.ncr.health-it.mbx.jomis-training@mail.mil).

## FEATURES

-  Situational awareness and force health protection
-  Disease/medical intelligence and surveillance in theater environments
-  Medical logistics providing world-wide asset visibility and equipment tracking
-  Geographic information system mapping capability
-  Patient search
-  Decision support

## BENEFITS

-  Enables rapid creation of medical logistics-focused, tailored operational view with a user-friendly custom dashboard
-  Accesses theater blood inventory canned reports and ad hoc queries
-  Provides decision support capability based on medical and logistical data to include:
  - command and control
  - environmental and occupational health
  - chemical and biological threats
  - available personnel
  - unit locations
  - weather
  - National Geospatial-Intelligence Agency map layers
