

FACT SHEET EKTROPY

PERSONNEL MODULE

The Ektropy Personnel Module is an information technology (IT) application within the Ektropy solution. Ektropy's Personnel Module captures and tracks all personnel (civilian, military and contractor) within an organization in order to clearly identify their most valuable assets: people.

This module allows the organization to always have true-to-date insight on talent resources and provide a way to forecast the impact of funding cuts on important program support. Military treatment facilities can leverage the tool to easily gain comprehensive insight into who's in their organization and analyze its composition to ensure they have all the right resources just where they need them.

Background:

Ektropy is an IT solution used across the Defense Health Agency Information Operations (J-6) Directorate to support program and portfolio management. The solution provides insight into personnel, programs, cost and contracts across all activities. It improves the management of cross program dependencies and the IT manpower footprint.
