HEALTH ARTIFACT AND IMAGE MANAGEMENT SOLUTION

DHA Defense Health Agency ®

SOLUTION DELIVERY DIVISION

HAIMS provides health care providers within the Department of Defense and the Department of Veterans Affairs global access to artifacts and images generated during the health care delivery process.

HAIMS serves as the authoritative data repository for the Service Treatment Record. It provides access to radiographs, clinical photographs, electrocardiographs, audio files, video files, documents and more. The system also transmits an electronic version of the STR to the Veterans Benefits Administration. This transfer streamlines the process for uniformed service members during separation and retirement actions and supports benefits determination.

Did you know?
On average, there are over 45,000 active HAIMS users per month

Did you know?
There are over 100 million artifacts and images available through HAIMS
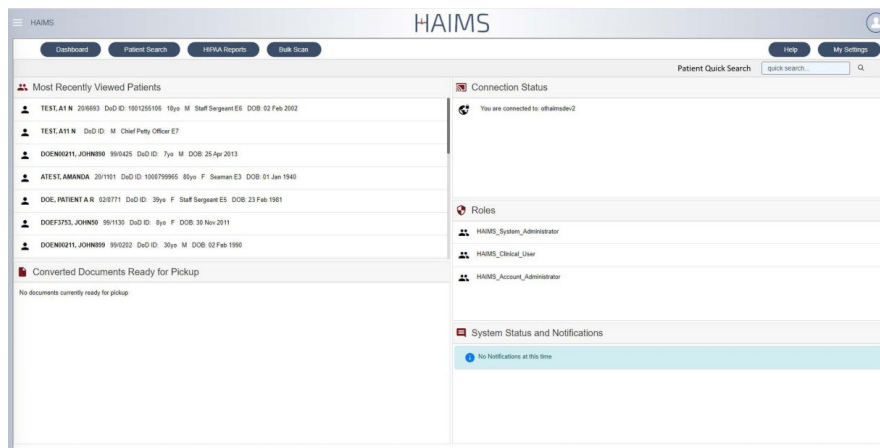

HAIMS Resources on milBook:

- HAIMS 2.0 Self-paced Training Videos
- Frequently Asked Questions
- User Account Management Module Guide
- Bulk Scanning and other Quick Reference Guides

HAIMS

Key Features

▸ Easily retrieve artifacts and images

▸ Access as a standalone system or within the electronic health record

▸ Serves as a global database for registered artifacts and images metadata

▸ Enhanced application stability, data management, and search capabilities

Key Benefits

▸ NilViewer provides access to radiographic images and study reports

▸ Improved bulk-scanning capabilities for asset management

▸ Artificial Intelligence re-mediates misfiled patient records, improving data quality

▸ Single sign-on access through entire clinical workflow
