JOINT OPERATIONAL MEDICINE INFORMATION SYSTEMS MARITIME MEDICAL MODULES

Maritime Medical Modules track medical readiness, environmental conditions, radiation exposure, and medical supplies through a central application managed by the Joint Operational Medicine Information Systems program management office, under the Program Executive Office, Defense Healthcare Management Systems.

WHAT ARE MARITIME MEDICAL MODULES?

MMM are automated, multi-user medical support functions that are grouped within a central application. The individual modules track medical readiness, environmental conditions, radiation exposure, and medical supplies of operational units, including SEAL Teams (Sea, Air, Land), Construction Battalions (Seabees), Marine Expeditionary Units, ships, and submarines.

MMM include storing, processing, and retrieving data. They also monitor the medical environment and health of personnel who live and work in the ship or facility and contribute to the overall readiness of the operational or shipboard medical department. The modules greatly reduce the administrative workload and enhance the credibility, standardization, and quality of health care documentation.

BENEFITS

- Improve the delivery of medical care
- Support surveillance analysis in operational environments
- Provide administrative support in operational environments
- Support management of medical supplies
- Increase efficiency and accuracy of radiation health protection programs

FEATURES

- Environment Health**
 Enables providers to monitor environmental conditions that may endanger patients' health, ensuring corrective action is taken before medical problems arise.
- Health Services**
 Tracks medical readiness and helps medical personnel collect and manage data to track and monitor patient medical readiness information.
- System Management**
 Manages facility data and provider information, patient transfers and system access.
- Radiation Health**
 Tracks radiation exposure data to preserve and maintain the physical well-being of personnel working near radioactive materials or exposed to ionizing radiation.
- DMLSS Maritime**
 Identifies requisitioning objectives by tracking low quantities per line item, automatically requisitioning these items and consequently crediting operating funds.

NOTE: Medical Encounters - AHLTA Theater provides the Medical Encounters capability as the Patient Encounter Module.
