- All samples were negative for Norovirus, *Salmonella*, *Campylobacter*, *Shigella* and diarrheagenic *E. coli*.

ADENOVIRUS AT MCRD PI:

- Ongoing adenovirus type 14 (Ad14) respiratory cases since June 2017. Among 135 FRI samples, 40(30%) were positive for adenovirus, with all 35 that typed being Ad14.
- Ad14 has also been found in 4 stool samples from AGE cases at MCRD PI since July 2017, including 2 recent cases from April/May. It is not clear whether Ad14 detected in stool represents adenovirus-associated AGE or merely virus shedding.
