

Recommended Child and Adolescent Immunization Schedule for ages 18 years or younger

UNITED STATES
2020

Vaccines in the Child and Adolescent Immunization Schedule*

Vaccines	Abbreviations	Trade names
Diphtheria, tetanus, and acellular pertussis vaccine	DTaP	Daptacel® Infanrix®
Diphtheria, tetanus, and acellular pertussis vaccine	DT	No trade name
<i>Haemophilus influenzae</i> type b vaccine	Hib (PRP-T)	Achib® Hibertix®
<i>Haemophilus influenzae</i> type b vaccine	Hib (PRP-OMP)	Pediaville®
Hepatitis A vaccine	HepA	Havrix® Varilicet®
Hepatitis B vaccine	HepB	Engerix-B® Recombivax HB®
Influenza vaccine (inactivated)	IV	Multiple
Influenza vaccine (live, attenuated)	LAIV	Flumist Quadrivalent
Measles, mumps, and rubella vaccine	MMR	M-M-R II
MenACWY-D	Menacta®	Menacta®
MenACWY-CRM	Menveo®	Menveo®
Meningococcal serogroup B vaccine	MenB-4C	Bexsero®
MenB-FHbp	Trumenba®	Trumenba®
Pneumococcal 13-valent conjugate vaccine	PCV13	Prevnar 13®
Pneumococcal 23-valent polysaccharide vaccine	PPSV23	Pneumovax® 23
Polio virus vaccine (inactivated)	iPV	IPOL®
Rotavirus vaccine	RV1	Rotarix®
Tetanus, diphtheria, and acellular pertussis vaccine	RTwS	RotaTeq®
Tetanus and diphtheria vaccine	Td	Adacel® Boostrix®
Varicella vaccine	VAR	Varivax®
Combination vaccines (use combination vaccines instead of separate injections when appropriate)		
DTP; hepatitis B, and inactivated poliovirus vaccine	DTaP-HeB-IPV	Pediarix®
DTP; inactivated poliovirus, and <i>Haemophilus influenzae</i> type b vaccine	DTaP-IPV/Hib	Pentacel®
DTP and inactivated poliovirus vaccine	DTaP-IPV	Kinrix® Quadacel®
Measles, mumps, rubella, and varicella vaccine	MMRV	ProQuad®

How to use the child/adolescent immunization schedule

1	2	3	4
Determine recommended vaccine by age (Table 1)	Determine recommended interval for catch-up vaccination (Table 2)	Assess need for additional recommended vaccines by medical condition and other indications (Notes) (Table 3)	Review vaccine types, frequencies, intervals, and considerations for special conditions (Notes)

Recommended by the Advisory Committee on Immunization Practices (www.cdc.gov/vaccines/acip) and approved by the Centers for Disease Control and Prevention (www.cdc.gov). American Academy of Pediatrics (www.aap.org), American Academy of Family Physicians (www.aafp.org), American College of Obstetricians and Gynecologists (www.acog.org), and American College of Nurse-Midwives (www.midwife.org).

Report
 • Suspected cases of reportable vaccine-preventable diseases or outbreaks to your state or local health department
 • Clinically significant adverse events to the Vaccine Adverse Event Reporting System (VAERS) at www.vaers.hhs.gov or 800-822-7967

Download the CDC Vaccine Schedules App for providers at www.cdc.gov/vaccines/schedules/hcp/schedule-app.html.

Helpful information

U.S. Department of
Health and Human Services
Centers for Disease
Control and Prevention

*Administer recommended vaccines if immunization history is incomplete or unknown. Do not restart or add doses to vaccine series for extended intervals between doses. When a vaccine is not administered at the recommended age, administer it at a subsequent visit. The use of trade names is for identification purposes only and does not imply endorsement by the ACIP or CDC.

Table 1
United States, 2020

Recommended Child and Adolescent Immunization Schedule for ages 18 years or younger,

These recommendations must be read with the notes that follow. For those who fall behind or start late, provide catch-up vaccination at the earliest opportunity as indicated by the green bars. To determine minimum intervals between doses, see the catch-up schedule (Table 2). School entry and adolescent vaccine age groups are shaded in gray.

Vaccine	Birth	1 mo	2 mos	4 mos	6 mos	9 mos	12 mos	15 mos	18 mos	19–23 mos	2–3 yrs	4–6 yrs	7–10 yrs	11–12 yrs	13–15 yrs	16 yrs	17–18 yrs
Hepatitis B (HepB)	1 st dose		2 nd dose							3 rd dose							
Rotavirus (RV1; RV1/2-dose series), RV5 (3-dose series)		1 st dose	2 nd dose														
Diphtheria, tetanus, acellular pertussis (DTaP <7 yrs)		1 st dose	2 nd dose		3 rd dose												
<i>Haemophilus influenzae type b</i> (Hib)		1 st dose	2 nd dose			3 rd or 4 th dose											
Pneumococcal conjugate (PCV13)		1 st dose	2 nd dose		3 rd dose												
Inactivated poliovirus (IPV <18 yrs)		1 st dose	2 nd dose				3 rd dose										
Influenza (ILV)																	
Measles, mumps, rubella (MMR)																	
Varicella (VAR)																	
Hepatitis A (HepA)																	
Tetanus, diphtheria, acellular pertussis (Tdap ≥ 7 yrs)																	
Human papillomavirus (HPV)																	
Meningococcal (MenACWY-D ≥ 9 mos, MenA/C/N-Y-CRM ≥ 2 mos)																	
Meningococcal B																	
Pneumococcal polysaccharide (PPSV23)

Table 2 Recommended Catch-up Immunization Schedule for Children and Adolescents Who Start Late or Who are More Than 1 Month Behind, United States, 2020

The table below provides catch-up schedules and minimum intervals between doses for children whose vaccinations have been delayed. A vaccine series does not need to be restarted, regardless of the time that has elapsed between doses. Use the section appropriate for the child's age. Always use this table in conjunction with Table 1 and the notes that follow.

Children age 4 months through 6 years						
Vaccine	Minimum Age for Dose 1	Minimum Interval Between Doses				
		Dose 1 to Dose 2	Dose 2 to Dose 3	Dose 3 to Dose 4	Dose 4 to Dose 5	Dose 5 to Dose 6
Hepatitis B	Birth	4 weeks 8 weeks and at least 16 weeks after first dose. Minimum age for the final dose is 26 weeks.	4 weeks 8 weeks and at least 16 weeks after first dose. Minimum age for the final dose is 26 weeks.	4 weeks 8 weeks and at least 16 weeks after first dose. Minimum age for the final dose is 26 weeks.	4 weeks 8 weeks and at least 16 weeks after first dose. Minimum age for the final dose is 26 weeks.	4 weeks 8 weeks and at least 16 weeks after first dose. Minimum age for the final dose is 26 weeks.
RotaTeVus		6 weeks Maximum age for first dose is 14 weeks, 6 days.	4 weeks No further doses needed if first dose was administered at age 15 months or older. If first dose was administered at age 15 months or older: 4 weeks if first dose was administered before the 1 st birthday, 8 weeks and age 12 the through 59 months (as final dose) OR if first dose was administered at age 12 through 14 months, if current age is 12 through 59 months and first dose was administered before the 1 st birthday and second dose administered at a younger than 15 months, OR if both doses were RBD-OMRI (PevznerB, Cervarix), and were administered before the 1 st birthday.	4 weeks No further doses needed if previous dose was administered at age 15 months or older. If current age is younger than 12 months and first dose was administered at younger than 7 months and at least 4 previous doses were PRE-1 (aC-Hib, Pentac, nicey-nicey or unknown). 8 weeks and age 12 the through 59 months (as final dose) OR if current age is younger than 12 months and first dose was administered at age 7 through 11 months; 8 weeks (as final dose) OR if first dose was administered at age 12 through 14 months, if current age is 12 through 59 months and first dose was administered before the 1 st birthday and second dose administered at a younger than 15 months, OR if both doses were RBD-OMRI (PevznerB, Cervarix), and were administered before the 1 st birthday.	6 months 8 weeks (as final dose) This dose only necessary for children age 12 through 59 months who received 3 doses before the 1 st birthday.	6 months 8 weeks (as final dose) This dose only necessary for children age 12 through 59 months who received 3 doses before the 1 st birthday.
Diphtheria, tetanus, and acellular pertussis	6 weeks	6 weeks Maximum age for first dose is 8 months, 0 days.	4 weeks No further doses needed if first dose was administered at age 15 months or older. If first dose was administered before the 1 st birthday, 8 weeks and age 12 the through 59 months (as final dose) OR if first dose was administered at age 12 through 14 months, if current age is 12 through 59 months and first dose was administered before the 1 st birthday and second dose administered at a younger than 15 months, OR if both doses were RBD-OMRI (PevznerB, Cervarix), and were administered before the 1 st birthday.	4 weeks No further doses needed if previous dose was administered at age 15 months or older. If current age is younger than 12 months and previous dose was administered at <7 months old, 8 weeks (as final dose for healthy children) OR if previous dose was administered 7–11 months (wait until at least 12 months old); 8 weeks (as final dose for healthy children) if first dose was administered at the 1 st birthday or after, 4 weeks if current age is <4 years. 4 weeks 6 months (as final dose) if current age is 4 years or older.	6 months 8 weeks (as final dose) This dose only necessary for children age 12 through 59 months who received 3 doses before the 1 st birthday.	6 months 8 weeks (as final dose) This dose only necessary for children age 12 through 59 months who received 3 doses before the 1 st birthday.
Hemophilus influenzae type b	6 weeks	6 weeks Maximum age for first dose is 8 months, 0 days.	4 weeks No further doses needed if first dose was administered at age 15 months or older. If first dose was administered before the 1 st birthday, 8 weeks and age 12 the through 59 months (as final dose) OR if first dose was administered at age 12 through 14 months, if current age is 12 through 59 months and first dose was administered before the 1 st birthday and second dose administered at a younger than 15 months, OR if both doses were RBD-OMRI (PevznerB, Cervarix), and were administered before the 1 st birthday.	4 weeks No further doses needed if previous dose was administered at age 15 months or older. If current age is younger than 12 months and previous dose was administered at <7 months old, 8 weeks (as final dose for healthy children) OR if previous dose was administered 7–11 months (wait until at least 12 months old); 8 weeks (as final dose for healthy children) if first dose was administered at the 1 st birthday or after, 4 weeks if current age is <4 years. 4 weeks 6 months (as final dose) if current age is 4 years or older.	6 months 8 weeks (as final dose) This dose only necessary for children age 12 through 59 months who received 3 doses before the 1 st birthday.	6 months 8 weeks (as final dose) This dose only necessary for children age 12 through 59 months who received 3 doses before the 1 st birthday.
Pneumococcal conjugate	6 weeks	6 weeks Maximum age for first dose is 8 months, 0 days.	4 weeks No further doses needed if first dose was administered at age 15 months or older. If first dose was administered before the 1 st birthday, 8 weeks and age 12 the through 59 months (as final dose) OR if first dose was administered at age 12 through 14 months, if current age is 12 through 59 months and first dose was administered before the 1 st birthday and second dose administered at a younger than 15 months, OR if both doses were RBD-OMRI (PevznerB, Cervarix), and were administered before the 1 st birthday.	4 weeks No further doses needed if previous dose was administered at age 15 months or older. If current age is younger than 12 months and previous dose was administered at <7 months old, 8 weeks (as final dose for healthy children) OR if previous dose was administered 7–11 months (wait until at least 12 months old); 8 weeks (as final dose for healthy children) if first dose was administered at the 1 st birthday or after, 4 weeks if current age is <4 years. 4 weeks 6 months (as final dose) if current age is 4 years or older.	6 months 8 weeks (as final dose) This dose only necessary for children age 12 through 59 months who received 3 doses before the 1 st birthday.	6 months 8 weeks (as final dose) This dose only necessary for children age 12 through 59 months who received 3 doses before the 1 st birthday.
Inactivated polioirus		6 weeks Maximum age for first dose is 8 months, 0 days.	4 weeks No further doses needed if first dose was administered at age 15 months or older. If first dose was administered before the 1 st birthday, 8 weeks and age 12 the through 59 months (as final dose) OR if first dose was administered at age 12 through 14 months, if current age is 12 through 59 months and first dose was administered before the 1 st birthday and second dose administered at a younger than 15 months, OR if both doses were RBD-OMRI (PevznerB, Cervarix), and were administered before the 1 st birthday.	4 weeks No further doses needed if previous dose was administered at age 15 months or older. If current age is younger than 12 months and previous dose was administered at <7 months old, 8 weeks (as final dose for healthy children) OR if previous dose was administered 7–11 months (wait until at least 12 months old); 8 weeks (as final dose for healthy children) if first dose was administered at the 1 st birthday or after, 4 weeks if current age is <4 years. 4 weeks 6 months (as final dose) if current age is 4 years or older.	6 months 8 weeks (as final dose) This dose only necessary for children age 12 through 59 months who received 3 doses before the 1 st birthday.	6 months 8 weeks (as final dose) This dose only necessary for children age 12 through 59 months who received 3 doses before the 1 st birthday.
Measles, mumps, rubella	12 months	12 months 2 months MenACWY-CRM 9 months MenACWY-D	3 months 6 months 8 weeks	3 months 6 months 8 weeks	See Notes	See Notes
Varicella	12 months					
Hepatitis A	12 months					
Meningococcal ACWY	7 years	Not applicable (N/A)	8 weeks 4 weeks	4 weeks If first dose of DTaP/DT/Td was administered before the 1 st birthday. 6 months (as final dose) If first dose of DTaP/DT/Td was administered at or after the 1 st birthday.	6 months (minimum age 4 years for final dose) 6 months (as final dose) DTaP was administered before the 1 st birthday.	6 months (as final dose) DTaP was administered before the 1 st birthday.
Human papillomavirus	9 years					
Hepatitis A	N/A					
Hepatitis B	N/A					
Inactivated polioirus	N/A					
Measles, mumps, rubella	N/A					
Varicella	N/A					

Table 3
Recommended Child and Adolescent Immunization Schedule by Medical Indication,
United States, 2020

Always use this table in conjunction with Table 1 and the notes that follow.

VACCINE	INDICATION						Asplenia or persistent complement deficiencies	CSF shunts or cochlear implants	Heart disease or chronic lung disease	Chronic liver disease	Diabetes
	Pregnancy	Immuno compromised status (excluding HIV infection)	HIV infection CD4+ count ¹	≥ 15% and total CD4 cell count of <200/mm ³	Kidney failure, end-stage renal disease, or on hemodialysis						
Hepatitis B											
Rotavirus			SCID ²								
Diphtheria, tetanus, & acellular pertussis (DTaP)											
<i>Haemophilus influenzae</i> type b											
Pneumococcal conjugate											
Inactivated poliovirus											
Influenza (IV) or			Asthma, wheezing (2–4 yrs) ³								
Influenza (LAIV)											
Measles, mumps, rubella											
Varicella											
Hepatitis A											
Tetanus, diphtheria, & acellular pertussis (Tdap)											
Human papillomavirus											
Meningococcal ACWY											
Meningococcal B											
Pneumococcal polysaccharide											
Vaccination according to the routine schedule recommended for children 2–4 years of age with asthma or wheezing during the preceding 12 months.											

1 For additional information regarding HIV laboratory parameters and use of live vaccines, see the General Best Practice Guidelines for Immunization, <http://www.cdc.gov/acip/recs/general-immunocompetence.htm> and Table 4-1 (footnote D) at <http://www.cdc.gov/acip/recs/general-recs/contraindications.html>.

2 Severe Combined Immunodeficiency.

3 LAM contraindicated for children 2–4 years of age with asthma or wheezing during the preceding 12 months.

No recommendation/
not applicable

Delay vaccination
until after pregnancy

Precaution—vaccine
might be indicated if
benefit of protection
outweighs risk of
adverse reaction

Precaution—vaccine
should not be administered

See Notes.

Not recommended/
contraindicated—vaccine
should not be administered

Additional risk factor
for which the vaccine
would be indicated

Notes

Recommended Child and Adolescent Immunization Schedule for ages 18 years or younger, United States, 2020

For vaccine recommendations for persons 19 years of age or older, see the Recommended Adult Immunization Schedule.

Additional information

- Consult relevant ACIP statements for detailed recommendations at www.cdc.gov/vaccines/hcp/acip-recs/index.html.

- For information on contraindications and precautions for the use of a vaccine, consult the General Best Practice Guidelines for Immunization at www.cdc.gov/vaccines/hcp/acip-recs/general-recommendations/child-and-relevant-acip-statements-at-18-years-of-age.html.

- For calculating intervals between doses, 4 weeks = 28 days. Intervals of 24 months are determined by calendar months.

- Within a number range (e.g., 12–18), a dash (–) should be read as “through.”

- Vaccine doses administered ≤4 days before the minimum age or interval are considered valid. Doses of any vaccine administered ≥5 days earlier than the minimum age or minimum interval should not be counted as valid and should be repeated as appropriate. The repeat dose should be spaced after the invalid dose by the recommended minimum interval. For further details, see Table 3-1. Recommended and minimum ages and intervals between vaccine doses, in General Best Practice Guidelines for Immunization at www.cdc.gov/vaccines/hcp/acip-recs/general-recommending.html.

- Information on travel vaccine requirements and travel recommendations is available at www.cdc.gov/travel/.

- For vaccination of persons with immunodeficiencies, see Table 8-1. Vaccination of persons with primary and secondary immunodeficiencies, in General Best Practice Guidelines for Immunization at www.cdc.gov/vaccines/hcp/acip-recs/general-recommendations/child-and-immunization-in-special-clinical-circumstances.htm, and Immunization in Special Clinical Circumstances (In: Kimberlin DW, Brady MT, Jackson MA, Long SS, eds. *Red Book: 2018 Report of the Committee on Infectious Diseases*; 31st ed. Itasca, IL: American Academy of Pediatrics; 2018:67–111).

- For information regarding vaccination in the setting of a vaccine-preventable disease outbreak, contact your state or local health department.

- The National Vaccine Injury Compensation Program (VICP) is a no-fault alternative to the traditional legal system for resolving vaccine injury claims. All routine child and adolescent vaccines are covered by VICP except for pneumococcal polysaccharide vaccine (PPSV23). For more information, see www.hrsa.gov/vaccinecompensation/index.html.

Diphtheria, tetanus, and pertussis (DTaP)

vaccination (minimum age: 6 weeks [14 years for Kinrix or Quadracel])

- Routine vaccination**
 - 5-dose series: 2, 4, 6, 15–18 months, 4–6 years
 - Prospectively:** Dose 4 may be administered as early as age 12 months if at least 6 months have elapsed since dose 3.
 - Retrospectively:** A 4th dose that was inadvertently administered as early as 12 months may be counted if at least 4 months have elapsed since dose 3.

Catch-up vaccination

- Dose 5 is not necessary if dose 4 was administered at age 4 years or older and at least 6 months after dose 3.
 - For other catch-up guidance, see Table 2.

Haemophilus influenzae type b vaccination

(minimum age: 6 weeks)

- Routine vaccination**
 - AcHIB, HibB, or Pentacell 4-dose series at 2, 4, 6, 12–15 months
 - PedvaxHIB 3-dose series at 2, 4, 12–15 months
- Catch-up vaccination**
 - Dose 1 at 7–11 months: Administer dose 2 at least 4 weeks later and dose 3 (final dose) at 12–15 months or 6 weeks after dose 2 (whichever is later).
 - Dose 1 at 12–14 months:** Administer dose 2 (final dose) at least 8 weeks after dose 1.
 - Dose 1 before 12 months and dose 2 before 15 months:** Administer dose 3 (final dose) 8 weeks after dose 2.
 - Dose 1 before 12 months and dose 2 before 12 months:** Administer dose 3 (final dose) 8 weeks after dose 2.
 - 2 doses of PedvaxHIB before 12 months:** Administer dose 3 (final dose) at 12–59 months and at least 8 weeks after dose 2.
 - Unvaccinated at 15–59 months:** 1 dose
 - Previously unvaccinated children ≥60 months or older** who are not considered high risk do not require catch-up vaccination.

- *Unconcentrated** = Less than routine series (through 14 months)
 - Or no doses (15 months or older)
- Unvaccinated or only 1 dose before age 12 months: 2 doses,** 8 weeks apart
 - 2 or more doses before age 12 months: 1 dose at least 8 weeks after previous dose

- Unvaccinated* persons age 15 months or older:**

- 1 dose** (preferably at least 14 days before procedure)

- HIV infection:**

- 12–59 months:**
 - Unvaccinated or only 1 dose before age 12 months: 2 doses, 8 weeks apart
 - 2 or more doses before age 12 months: 1 dose at least 8 weeks after previous dose
- 1 dose**

- Immunoglobulin deficiency, early component complement deficiency:**

- 12–59 months:**
 - Unvaccinated or only 1 dose before age 12 months: 2 doses, 8 weeks apart
 - 2 or more doses before age 12 months: 1 dose at least 8 weeks after previous dose
- Or no doses (15 months or older)**

Special situations

Chemotherapy or radiation treatment:

- 12–59 months:**
 - Unvaccinated or only 1 dose before age 12 months: 2 doses, 8 weeks apart
 - 2 or more doses before age 12 months: 1 dose at least 8 weeks after previous dose
- Doses administered within 14 days of starting therapy or during completion:**

- For other catch-up guidance, see Table 2.

Notes

Recommended Child and Adolescent Immunization Schedule for ages 18 years or younger, United States, 2020

Hepatitis A vaccination (minimum age: 12 months for routine vaccination)

Routine vaccination

- 2-dose series (minimum interval: 6 months) beginning at age 12 months

Catch-up vaccination

- Unvaccinated persons through 18 years should complete a 2-dose series (minimum interval: 6 months).
- Persons who previously received 1 dose at age 12 months or older should receive dose 2 at least 6 months after dose 1.
- Adolescents 18 years and older may receive the combined with 2 doses, separated by at least 6 months, between 12 and 23 months of age
- **Unvaccinated age 12 months and older:** Administer dose 1 as soon as travel is considered.

International travel

- Persons traveling to or working in countries with high or intermediate endemic hepatitis A (www.cdc.gov/travel/):
 - Infants age 6–11 months: 1 dose before departure; revaccinate with 2 doses, separated by at least 6 months, between 12 and 23 months of age
 - **Unvaccinated age 12 months and older:** Administer dose 1 as soon as travel is considered.

Hepatitis B vaccination (minimum age: birth)

Birth dose (monovalent HepB vaccine only)

- Mother is HBsAg-negative: 1 dose within 24 hours of birth for all medically stable infants >2,000 grams. Infants <2,000 grams: Administer 1 dose at chronological age 1 month or hospital discharge.
- Mother is HBsAg-positive:
 - Administer HepB vaccine and hepatitis B immune globulin (HBIG) (in separate limbs) within 12 hours of birth, regardless of birth weight. For infants <2,000 grams, administer 3 additional doses of vaccine (total of 4 doses) beginning at age 1 month.
 - Test for HBsAg and anti-HBs at age 9–12 months. If HepB series is delayed, test 1–2 months after final dose.

Mother's HBsAg status is unknown:

- Administer HepB vaccine within 12 hours of birth, regardless of birth weight.
- For infants <2,000 grams, administer HBIG in addition to HepB vaccine (in separate limbs) within 12 hours of birth. Administer additional doses of vaccine (total of 4 doses) beginning at age 1 month.
- Determine mother's HBsAg status as soon as possible. If mother is HBsAg-positive, administer HBIG to infants >2,000 grams as soon as possible, but no later than 7 days of age.

Routine series

- 3-dose series administered before age 6 weeks

Special situations

Immunocompromising conditions, including HIV infection:

- 3-dose series as above
- **History of sexual abuse or assault:** Start at age 9 years.
- **Pregnancy:** HIV vaccination not recommended until after pregnancy; no intervention needed if vaccinated while pregnant; pregnancy testing not needed before vaccination

Influenza vaccination

(minimum age: 6 months [IIV], 2 years [LAIV], 18 years [recombinant influenza vaccine, RIV])

Routine vaccination

- Any influenza vaccine appropriate for age and health status annually:
 - 2 doses, separated by at least 4 weeks, for **children age 6 months–8 years** who have received fewer than 2 influenza vaccine doses before July 1, 2019, or whose influenza vaccination history is unknown (administer dose 2 even if the child turns 9 between receipt of dose 1 and dose 2)
 - 1 dose for **children age 6 months–8 years** who have received at least 2 influenza vaccine doses before July 1, 2019
 - **1 dose for all persons age 9 years and older**

- For third-year catch-up vaccination, see the 2020–21 ACIP influenza vaccine recommendations.

Special situations

Egg allergy, live virus only:

- Any influenza vaccine appropriate for age and health status annually

IgE allergy with symptoms other than hives (e.g., angioedema, respiratory distress), need for emergency medical services or epinephrine:

- Any influenza vaccine appropriate for age and health status annually in medical setting under supervision of health care provider who can recognize and manage severe allergic reactions

LAV should not be used in persons with the following conditions or situations:

- History of severe allergic reaction to a previous dose of any influenza vaccine or to any vaccine component (excluding eggs, see details above)
- Receiving aspirin or salicylate-containing medications
- Age 2–4 years with history of asthma or wheezing
- Immunocompromise due to any cause (including medications and HIV infection)
- Anatomic or functional asplenia
- Cochlear implant
- Cerebral fluid-oropharyngeal communication

Human papillomavirus vaccination

(minimum age: 9 years)

Routine and catch-up vaccination

(can start at age 9 years) and a catch-up HPV vaccination recommended for all persons through age 18 years if not adequately vaccinated

- 2- or 3-dose series depending on age at initial vaccination:
 - **Age 9 through 14 years at initial vaccination:** 2-dose series at 0, 6–12 months (minimum interval: 5 months); repeat dose if administered too soon!
 - **Age 15 years or older at initial vaccination:** 3-dose series at 0, 1–2 months, 6 months (minimum intervals: dose 1 to dose 2: 4 weeks; dose 2 to dose 3: 12 weeks; dose 1 to dose 3: 5 months); repeat dose if administered too soon!
 - If completed valid vaccination series with any HPV vaccine, no additional doses needed

- Close contacts or caregivers of severely immunosuppressed persons who require a protected environment

- Pregnancy
- Received influenza antiviral medications within the previous 48 hours

Notes

Recommended Child and Adolescent Immunization Schedule for ages 18 years or younger, United States, 2020

Measles, mumps, and rubella vaccination
(minimum age: 12 months for routine vaccination)

Routine vaccination

- * 2-dose series at 1–15 months, 4–5 years
- * Dose 2 may be administered as early as 4 weeks after dose 1.

Catch-up vaccination

- * Unvaccinated children and adolescents: 2-dose series at least 4 weeks apart
- * The maximum age for use of MMRV is 12 years.

Special situations

International travel

- * Infants age 6–11 months: 1 dose before departure; revaccinate with a 2-dose series with dose 1 at 12–15 months (12 months for children in high-risk areas) and dose 2 as early as 4 weeks later.
- * **Unvaccinated children age 12 months and older:** 2-dose series at least 4 weeks apart before departure

Travel in countries with hyperendemic or epidemic meningococcal disease, including countries in the African meningitis belt or during the Hajj (www.cdc.gov/travel/):

- * Children less than age 24 months:
 - **Menveo (age ≥ 23 months):**
 - Dose 1 at 2 weeks; 2-dose series at 2, 6, 12 months
 - Dose 1 at 7–23 months; 2-dose series (dose 2 at least 12 weeks after dose 1 and after age 12 months)

Menveo (age ≥ 23 months):
- Dose 1 at 2 weeks; 2-dose series at 2, 6, 12 months

Menactra (age ≥ 23 months):
- Dose 1 at 2 weeks; 2-dose series at 2, 6, 12 months

MenACWY-D (Menactra):
- Dose 1 at 2 weeks; 2-dose series at least 4 weeks apart

MenACWY-CRM (Menveo):
- Dose 1 at 2 weeks; 2-dose series at least 4 weeks apart

MenB-FHbp (Trumenba):
- Dose 1 at age 11–12 years and dose 2 at 16 years

Note: Menactra should be administered either before or at the same time as DTaP for MenACWY booster dose recommendations for groups listed under "Special situations" and in an outbreak setting and for additional meningococcal vaccination information, see www.cdc.gov/vaccines/hcp/acip-recs/vacc-specific/mening.html

Routine vaccination

- * Age 13–15 years: 1 dose now and booster at age 16–18 years (minimum interval: 8 weeks)
- * Age 16–18 years: 1 dose

Special situations

Anatomic or functional asplenia (including sickle cell disease), HIV infection, persistent complement component deficiency, complement inhibitor (e.g., eculizumab, ravulizumab) use:

- * **Menveo**
 - Dose 1 at age 8 weeks: 4-dose series at 2, 4, 6, 12 months
 - Dose 1 at age 7–23 months: 2-dose series (dose 2 at least 12 weeks after dose 1 and after age 12 months)
 - Dose 1 at age 24 months or older: 2-dose series at least 8 weeks apart

Persistent complement component deficiency or complement inhibitor use:

- * Age 9–23 months: Not recommended
- * Age 24 months or older: 2-dose series at least 8 weeks apart

Menactra must be administered at least 4 weeks after completion of PCV13 series.

Bexsero and Trumenba are not interchangeable; the same product should be used for all doses in a series.

For MenB booster dose recommendations for groups listed under "Special situations" and in an outbreak setting and for additional meningococcal vaccination information, see www.cdc.gov/acip/recs/vacc-specific/mening.html.

Pneumococcal vaccination
(minimum age: 6 weeks [PCV13], 2 years [PPSV23])

Routine vaccination with PCV13

- * Dose 1 at 2 weeks; 4-dose series at 2, 6, 12, 18 months
- * Dose 1 at 12–15 months; 2-dose series (dose 2 at least 12 weeks after dose 1 and after age 12 months)

Catch-up vaccination with PCV13

- * Dose 1 at age 2 at least 12 weeks after dose 1; dose 2 may be administered as early as 8 weeks after dose 1 (traveler)
- * Children age 2 years or older: 1 dose Menveo or Menactra

First-year college students who live in residential housing (if not previously vaccinated at age 16 years or older) or military recruits:

- * 1 dose Menveo or Menactra

Adolescent vaccination of children who received MenACWY prior to age 10 years:

* Children for whom boosters are recommended because of an ongoing increased risk of meningococcal disease (e.g., those with complement deficiency, HIV, or asplenia); follow the booster schedule for persons at increased risk (see below).

* Children for whom boosters are not recommended (e.g., those who received a single dose for travel to a country where meningococcal disease is endemic); Administer MenACWY according to the recommended adolescent schedule with dose 1 at age 11–12 years and dose 2 at 16 years.

Note: Menactra should be administered either before or at the same time as DTaP for MenACWY booster dose recommendations for groups listed under "Special situations" and in an outbreak setting and for additional meningococcal vaccination information, see www.cdc.gov/vaccines/hcp/acip-recs/vacc-specific/mening.html

Meningococcal serogroup B vaccination
(minimum age: 10 years [MenB-4C, Bexsero; MenB-FHbp, Trumenba])

Shared clinical decision-making

- * Adolescents not at increased risk age 16–23 years (preferred age 16–18 years) based on shared clinical decision-making:
 - **Bexsero:** 2-dose series at least 1 month apart
 - **Trumenba:** 2-dose series at least 6 months apart; if dose 2 is administered earlier than 6 months, administer a 3rd dose at least 4 months after dose 2.

Special situations

Anatomic or functional asplenia (including sickle cell disease), persistent complement component deficiency, complement inhibitor (e.g., eculizumab, ravulizumab) use:

- * **Bexsero**
 - Dose 1 at age 8 weeks: 4-dose series at 2, 4, 6, 12 months
 - Dose 1 at age 7–23 months: 2-dose series (dose 2 at least 12 weeks after dose 1 and after age 12 months)
 - Dose 1 at age 24 months or older: 2-dose series at least 8 weeks apart

Anatomic or functional asplenia (including sickle cell disease) or HIV infection:

- * Age 9–23 months: Not recommended
- * Age 24 months or older: 2-dose series at least 8 weeks apart

Menactra must be administered at least 4 weeks after completion of PCV13 series.

For MenB booster dose recommendations for groups listed under "Special situations" and in an outbreak setting and for additional meningococcal vaccination information, see www.cdc.gov/acip/recs/vacc-specific/mening.html.

For healthy children age 24–59 months with any incomplete PCV13 series:

- * For other catch-up guidance, see Table 2.

Special situations

High-risk conditions below: When both PCV13 and PPSV23 are indicated, administer PCV13 first; PCV13 and PPSV23 should not be administered during the same visit.

Chronic heart disease (particularly cyanotic congenital heart disease and cardiac failure), chronic lung disease (including asthma treated with high-dose, oral corticosteroids), diabetes mellitus:

For healthy children age 24–59 months with any incomplete PCV13 series:

- * Age 2–5 years
 - Any incomplete* series with:
 - 3 PCV13 doses: 1 dose PCV13 (at least 8 weeks after any prior PCV13 dose)
 - Less than 3 PCV13 doses: 2 doses PCV13 (8 weeks after the most recent dose and administered 6 weeks apart)
 - No history of PPSV23: 1 dose PPSV23 (at least 8 weeks after any prior PCV13 dose)
- * Age 6–18 years
 - Any incomplete* series with:
 - 3 PCV13 doses: 1 dose PCV13 (at least 8 weeks after any prior PCV13 dose)
 - Any PCV13 but no PPSV23: 1 dose PPSV23 (at least 8 weeks after the most recent dose of PCV13)
 - No history of PPSV23: 1 dose PPSV23 (at least 8 weeks after any prior PCV13 dose)

For healthy children age 60 years and older:

- * Any incomplete* series with:
 - 3 PCV13 doses: 1 dose PCV13 (at least 8 weeks after any prior PCV13 dose)
 - Any PCV13 but no PPSV23: 1 dose PPSV23 (at least 8 weeks after the most recent dose of PCV13)
 - No history of PPSV23: 1 dose PPSV23 (at least 8 weeks after the most recent dose of PCV13)

For healthy children age 2–5 years:

- * Any incomplete* series with:
 - 3 PCV13 doses: 1 dose PCV13 (at least 8 weeks after any prior PCV13 dose)
 - Any history of either PCV13 or PPSV23: 1 dose PCV13, 1 dose PPSV23 (at least 8 weeks later)
 - Any PCV13 but no PPSV23: 1 dose PPSV23 (at least 8 weeks after the most recent dose of PCV13)
 - No history of PPSV23: 1 dose PPSV23 (at least 8 weeks after the most recent dose of PCV13)

For healthy children age 6–18 years:

- * Any incomplete* series with:
 - 3 PCV13 doses: 1 dose PCV13 (at least 8 weeks after any prior PCV13 dose)
 - Any history of either PCV13 or PPSV23: 1 dose PCV13, 1 dose PPSV23 (at least 8 weeks later)
 - Any PCV13 but no PPSV23: 1 dose PPSV23 (at least 8 weeks after the most recent dose of PCV13)
 - No history of PPSV23: 1 dose PPSV23 (at least 8 weeks after the most recent dose of PCV13)

For healthy children age 60 years and older:

- * Any incomplete* series with:
 - 3 PCV13 doses: 1 dose PCV13 (at least 8 weeks after any prior PCV13 dose)
 - Any history of either PCV13 or PPSV23: 1 dose PCV13, 1 dose PPSV23 (at least 8 weeks later)
 - Any PCV13 but no PPSV23: 1 dose PPSV23 (at least 8 weeks after the most recent dose of PCV13)
 - No history of PPSV23: 1 dose PPSV23 (at least 8 weeks after the most recent dose of PCV13)

Notes

Recommended Child and Adolescent Immunization Schedule for ages 18 years or younger, United States, 2020

Sickle cell disease and other hemoglobinopathies;

anatomic or functional aplasia; congenital or acquired immunodeficiency; HIV infection; chronic renal failure;

nephrotic syndrome; malignant neoplasms, leukemias, lymphomas, Hodgkin disease, and other diseases associated with treatment with immunosuppressive drugs or radiation therapy; solid organ transplantation; multiple myeloma.

Age 2–5 years:

• Any incomplete* series with:

- 3 PCV13 doses: 1 dose PCV13 (at least 8 weeks after any prior PCV13 dose)

- Less than 3 PCV13 doses: 2 doses PCV3 (8 weeks after the most recent dose and administered at 2 weeks apart)

- History of PPV23 (at least 8 weeks after any prior PCV13 dose) and a 2nd dose of PPV23 5 years later

Age 6–18 years:

- History either PCV13 or PPV23: 1 dose PCV3, 2 doses PPV23 (dose 1 of PPV23 administered 8 weeks after PCV13 and dose 2 of PPV23 administered at least 8 years after dose 1 of PPV23)
- Any PCV13 (but not PPV23; 2 doses PPV23; dose 1 of PPV23 administered weeks after the most recent dose of PCV13 and dose 2 of PPV23 administered at least 8 years after dose 1 of PPV23)
- PPV23 but no PCV13; 1 dose PCV13; at least 8 weeks after the most recent PPV23 dose and a 2nd dose of PPV23 administered 5 years after dose 1 of PPV23 and at least 8 weeks after dose of PCV13

Chronic liver disease, alcoholism:

• History of PPV23: 1 dose PPV23 (at least 8 weeks after any prior PCV13 dose).

Catch-up vaccination

• Adolescents age 13–18 years who have not received Tdap:

- 1 dose Tdap, then Td or Tdap booster every 10 years.

• Persons age 7–18 years not fully vaccinated* with DTap:

- 1 dose Tdap as part of the catch-up series (preferably the first dose); if additional doses are needed, use Td or Tdap.

• Tdap administered at 7–10 years:

• Children age 7–9 years who receive Tdap: should receive the routine Tdap dose at age 11–12 years.

- Children age 10 years who receive Tdap do not need to receive the routine Tdap dose at age 11–12 years.

• DTap inadvertently administered at or after age 7 years:

- Children age 7–9 years: Tdap may count as part of catch-up series. Routine Tdap dose at age 11–12 years should be administered.

• Children age 10–18 years: Count dose of DTap as the adolescent Tdap booster.

• For other catch-up guidance, see Table 2.

• For information on use of Tdap or Td as tetanus prophylaxis in wound management, see www.cdc.gov/mmwr/volumes/67/rr/rro7029a.htm.

Rotavirus vaccination

(minimum age: 6 weeks)

Routine vaccination

(minimum age: 12 months)

Varicella vaccination

(minimum age: 12 months)

Routine vaccination

(minimum age: 12 months)

*Fully vaccinated = 5 valid doses of DTaP OR 4 valid doses of DtaP if dose 4 was administered at age 4 years or older

• For other catch-up guidance, see Table 2.

• For information on use of Tdap or Td as tetanus prophylaxis in wound management, see www.cdc.gov/mmwr/volumes/67/rr/rro7029a.htm.

• Ensure persons age 7–18 years without evidence of immunity (see www.cdc.gov/mmwr/pdf/rr/rr5604.pdf) have 2-dose series:

- Age 12 years: routine interval: 3 months (a dose administered after a 4-week interval may be counted)

- Age 13 years and older: routine interval: 4–8 weeks (minimum interval: 4 weeks)

- The maximum age for use of MMRV is 12 years.

• For information on use of MMRV is 12 years.

• For other catch-up vaccination, see Table 2.

• For information on use of Tdap or Td as tetanus prophylaxis in wound management, see www.cdc.gov/mmwr/volumes/67/rr/rro7029a.htm.

• For other catch-up vaccination, see Table 2.

• For information on use of Tdap or Td as tetanus prophylaxis in wound management, see www.cdc.gov/mmwr/volumes/67/rr/rro7029a.htm.

• For other catch-up vaccination, see Table 2.

• For information on use of Tdap or Td as tetanus prophylaxis in wound management, see www.cdc.gov/mmwr/volumes/67/rr/rro7029a.htm.
