Abbreviations: DoD = Department of Defense; NH = Northern Hemisphere; SH = Southern Hemisphere; DVD = Direct Vendor Delivery; IIV3 = inactivated influenza vaccine, trivalent; IIV4 = inactivated influenza vaccine, quadrivalent; allIV3 = adjuvanted inactivated influenza vaccine, trivalent; cclIV3 = cell culture-based vaccine, trivalent; RIV3 = recombinant influenza vaccine, trivalent; LAIV3 = live attenuated influenza vaccine, trivalent; PFS – prefilled syringes; MDV = multidose vial; SDV = single dose vial; FDA = Food and Drug Administration.

1. Vaccination providers should consult FDA-approved prescribing information for 2024-25 influenza vaccines for the most complete and updated information, including, but not limited to, indications, contraindications, warnings, and precautions. Package inserts for U.S.-licensed vaccines are available at: <https://www.fda.gov/vaccines-blood-biologics/vaccines/vaccines-licensed-use-united-states>. Availability and characteristics of specific products and presentations might change or differ from what is described in this table.

2. Once the stopper of the Afluria[®] multidose vials are pierced the vial must be discarded within 28 days. The number of needle punctures should not exceed 20 per multidose vial.

3. Afluria[®] is licensed for administration by needle and syringe (6 months and older) or by PharmaJet Stratis[®] Needle-Free Injection System (18 through 64 years).

4. The approved dose volume for Afluria Trivalent is 0.25-mL for children 6 through 35 months and a 0.5-mL dose for persons aged ≥3 years. However, 0.25-mL prefilled syringes are no longer available. For children aged 6 through 35 months, a 0.25-mL dose must be obtained from a multidose vial.

5. Fluzone[®] Trivalent is currently approved for ages 6 through 35 months as either 0.25-mL or 0.5-mL per dose; however, 0.25-mL prefilled syringes are no longer available. If a prefilled syringe of Fluzone Trivalent is used for a child in this age group, the dose volume will be 0.5-mL per dose.

6. No more than 10 doses (0.25-mL or 0.5-mL) should be withdrawn from the Fluzone[®] multidose vial.

7. Fluad[®] includes the MF59C.1 adjuvant (MF59[®]), a squalene-based oil-in-water emulsion.

8. Trivalent inactivated vaccine high-dose: a 0.5-mL dose contains 60 µg of each vaccine antigen (180 µg total).

9. The Center for Disease Control's (CDC) Advisory Committee on Immunization Practices (ACIP) 2024-25 influenza season vaccine recommendations can be found at the following website:
