

# DoD Consolidated Influenza Surveillance Report

Week 49 (05 Dec 2021 — 11 Dec 2021)

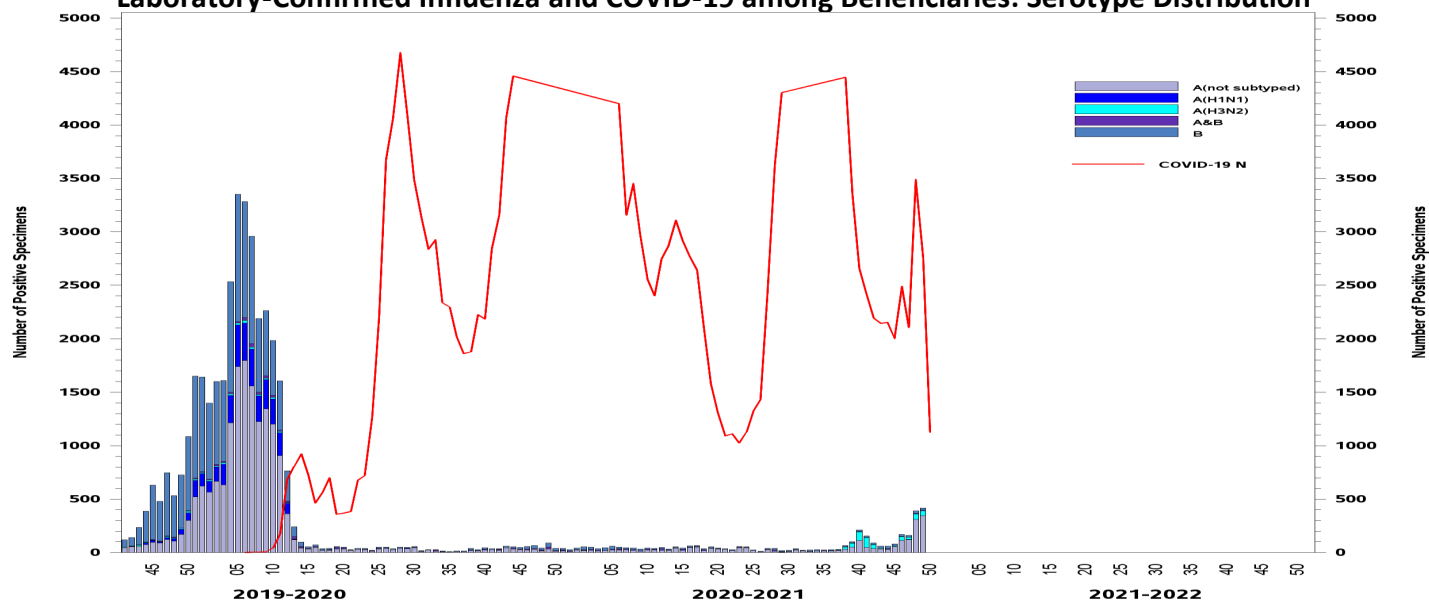

## One Page Summary: Weekly Highlights

- Laboratory-confirmed influenza cases, dispensed antiviral prescription counts, and inpatient counts among all beneficiaries were low during week 49 of the 2021-2022 influenza season.
- Among active component Service Members, laboratory-confirmed influenza cases and antiviral prescriptions were low.
- ILI activity was minimal to low for a majority of installations and states.
- COVID-19 cases continue to account for a majority of all influenza and COVID-19 cases combined.
- There was one laboratory-confirmed influenza hospitalization reported during week 49. (Season total: 7).

## Influenza Surveillance Indicators (2021-2022 season)

All Beneficiaries	Total Per Week		Trend	Activity Level
Laboratory Cases	416		▲	Low
Dispensed Antivirals	191		▲	Low
<b>Severity</b>				<b>Activity Level</b>
Inpatient Laboratory Cases	1		◀▶	Low
Inpatient Dispensed Antivirals	1		◀▶	Low
<b>Active Component</b>				<b>Activity Level</b>
Laboratory Cases	188		▲	Low
Dispensed Antivirals	47		◀▶	Low
ILI Outpatient Visits	1%		◀▶	Minimal

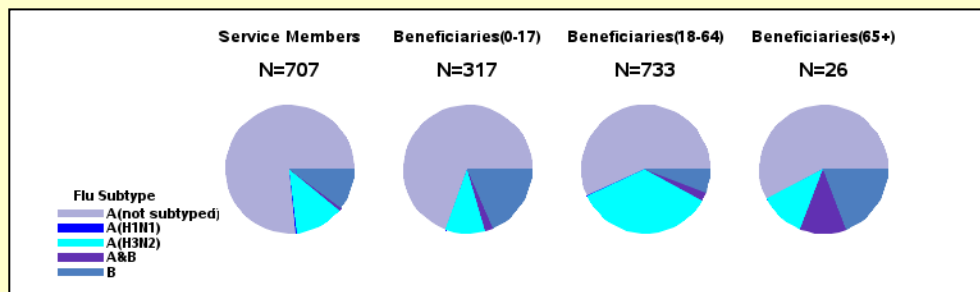

## Laboratory-Confirmed Influenza and COVID-19 among Beneficiaries: Serotype Distribution

# Confirmed Influenza and COVID-19 Cases (2021-2022 Season: Week 49)

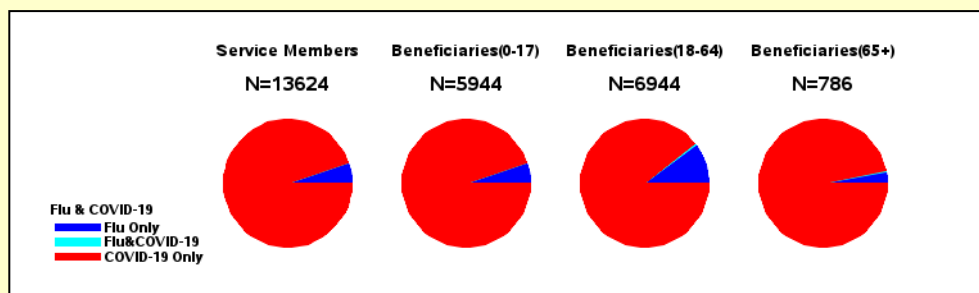

## Number and Distribution of Influenza Positive Specimens since week 40, by Beneficiary Status and Serotype

- The number of laboratory-confirmed influenza positive specimens for the season is low. The majority of positive specimens were among beneficiaries.
- Among subtyped specimens, influenza A (H3N2) has predominated.

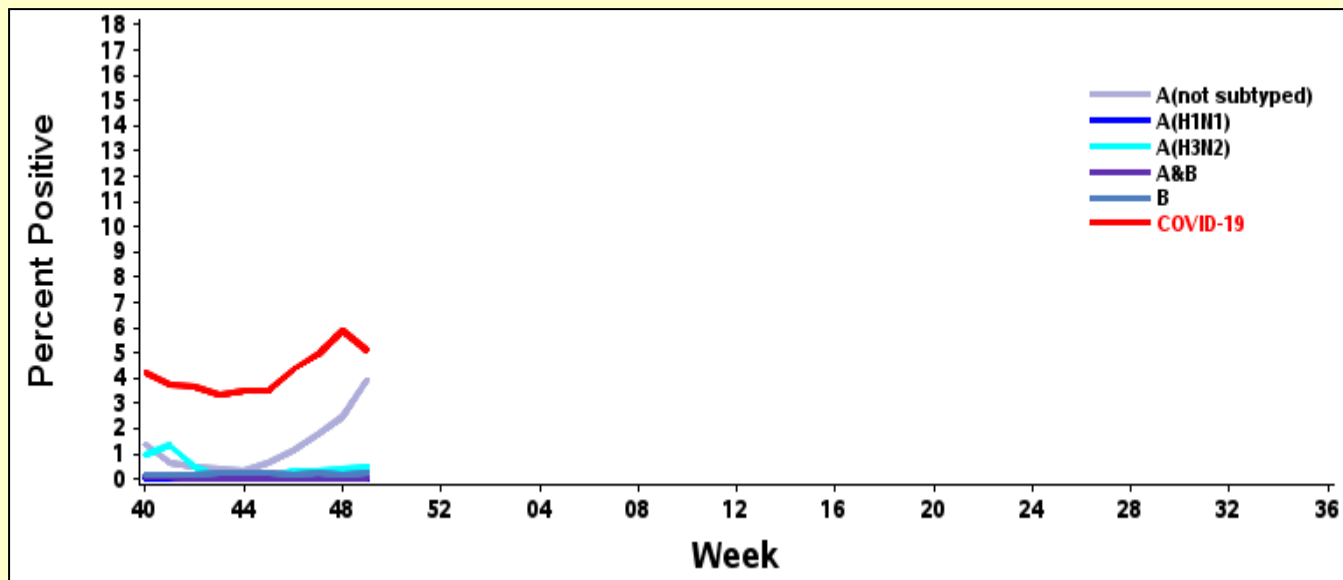

## Number and Distribution of Influenza Positive Specimens and COVID-19 Cases since week 40, by Beneficiary Status

- COVID-19 cases predominated among all beneficiary categories, representing a majority of influenza and COVID-19 cases combined.

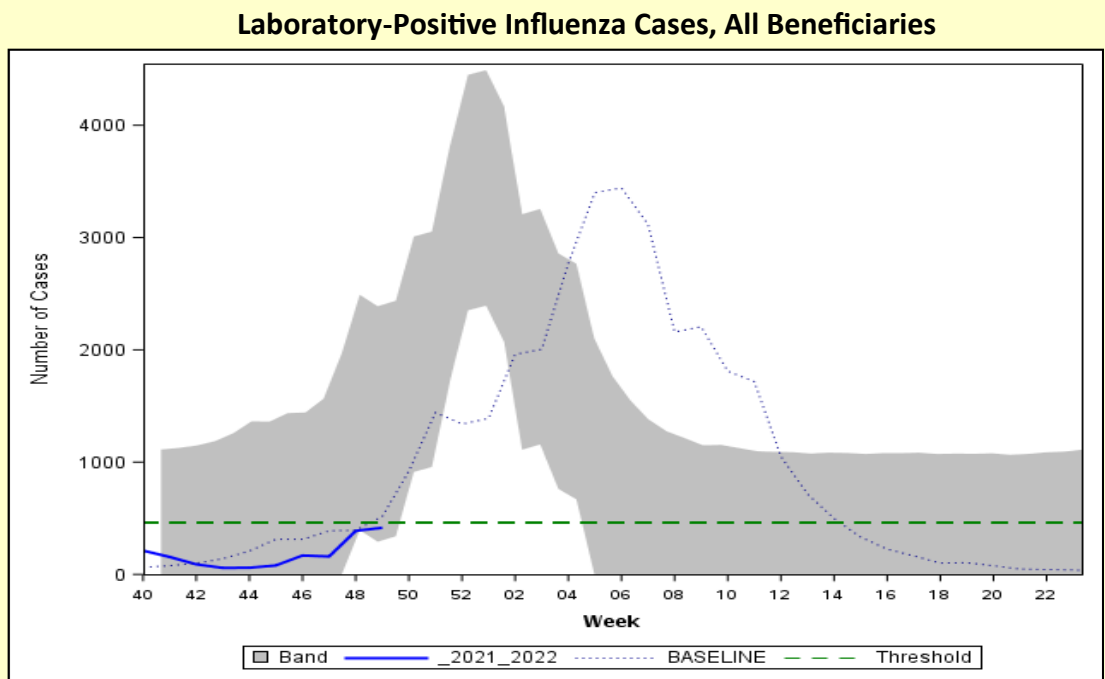

## Percent of Specimens Positive for Influenza (by Serotype) or COVID-19

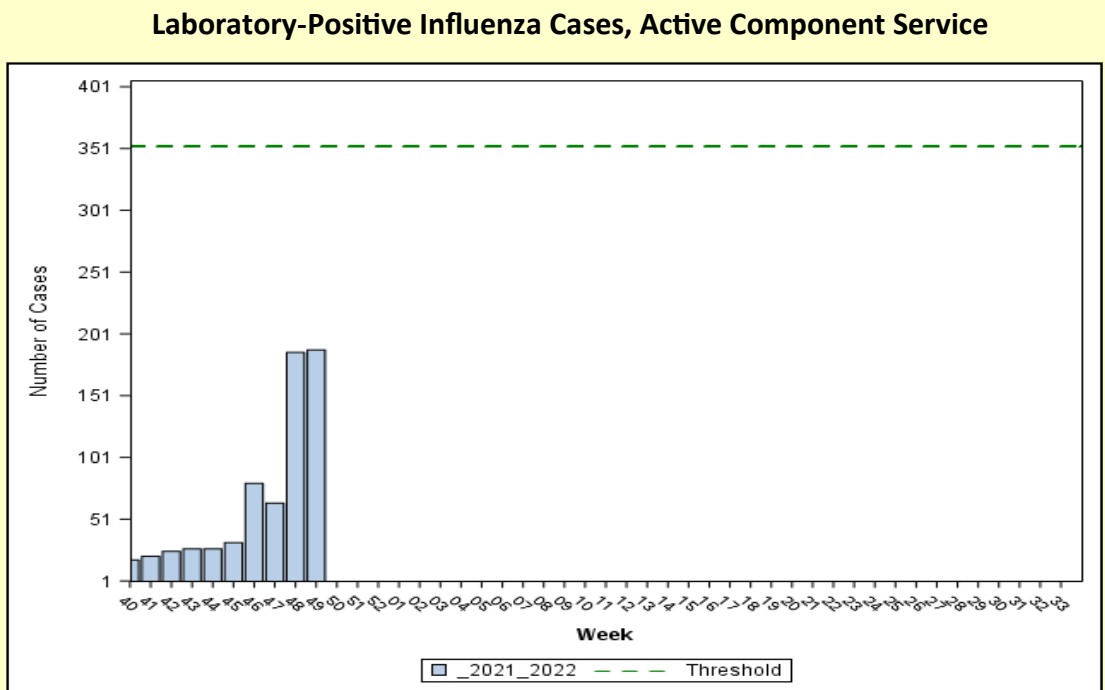

- There was a steady increase in the percent of specimens positive for influenza A (not subtyped) during week 49, while subtyped specimens remained stable and low. The percent of specimens positive for SARS-CoV-2 was approximately 5%.

# Laboratory-Confirmed Influenza (2021-2022 Season: Week 49)

- The number of laboratory-confirmed influenza cases among all beneficiaries remained just below the threshold and baseline for week 49.
- Band indicates one standard deviation above and below seasonal baseline estimates. Threshold indicates two standard deviations above off-season average.

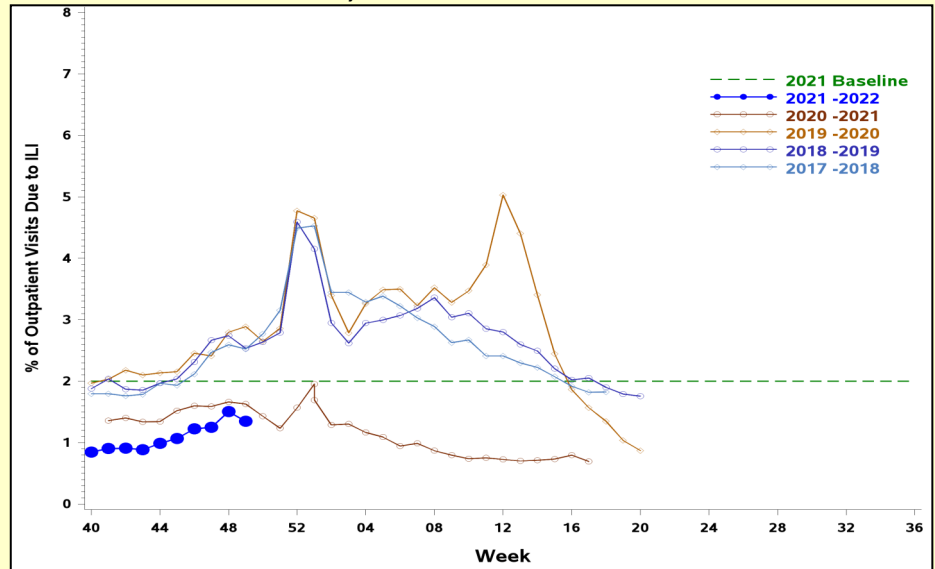

- The number of active component Service Member laboratory-confirmed influenza cases increased slightly, but remained well below the threshold.
- Threshold indicates two standard deviations above seasonal baseline estimates.

# ILI and Dispensed Antiviral Prescriptions (2021-2022 Season: Week 49)

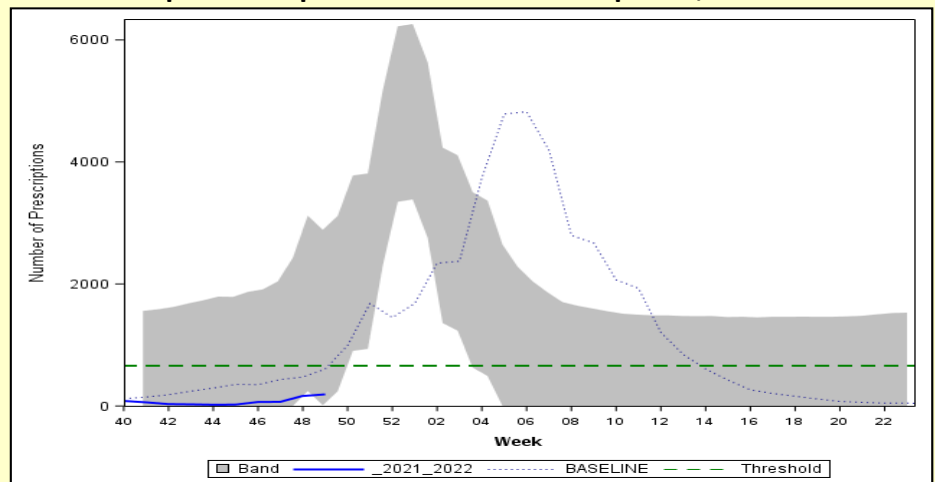

- The percentage of outpatient visits due to ILI was below baseline and similar to the 2020-2021 season.
- COVID-19 mitigation efforts are likely contributing to the lower than normal number of ILIs.

**Percent of Outpatient Visits Due to ILI:  
Service Members, 2017-2018 to 2021-2022 Seasons**

- Influenza-specific dispensed antiviral prescriptions among all beneficiaries remained low and below the weekly baseline and threshold.
- Band indicates one standard deviation above and below seasonal baseline estimates. Threshold indicates two standard deviations above off-season average.

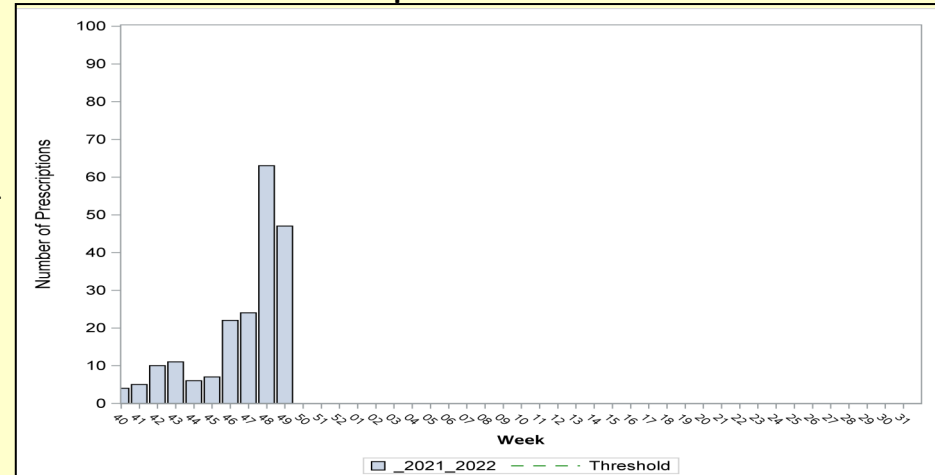

**Influenza-Specific Dispensed Antiviral Prescriptions, All Beneficiaries**

**Influenza-Specific Dispensed Antiviral Prescriptions:**

- The number of influenza-specific dispensed antiviral prescriptions among active component Service Members decreased since week 48.
- Threshold indicates two standard deviation above the overall weighted average during the season. However, there is not enough data for the season to calculate the threshold for this metric.

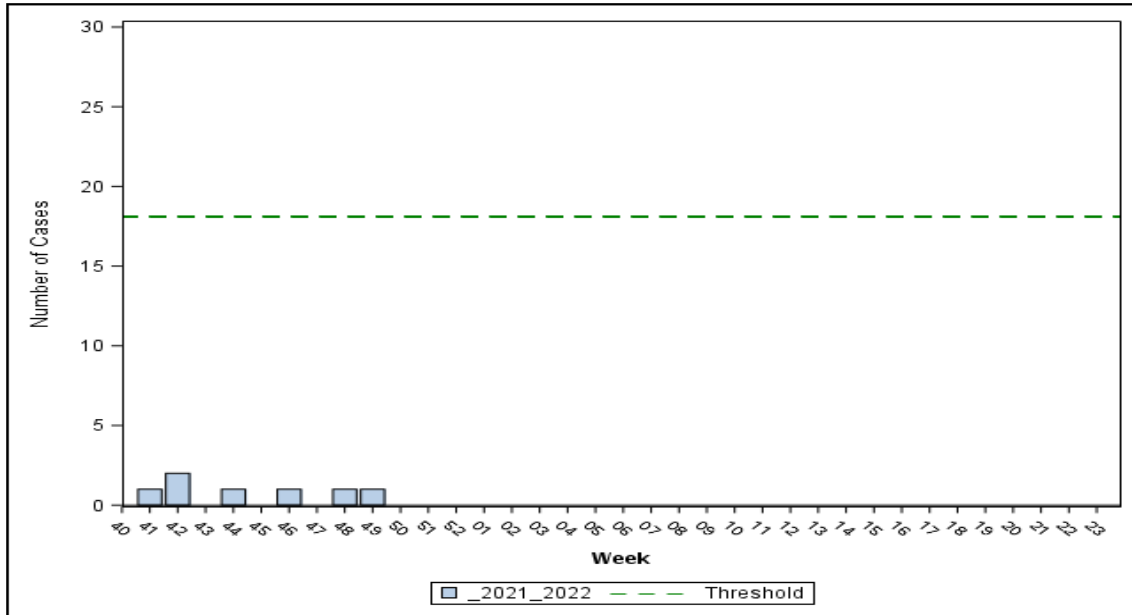

**Active Component Service Members**

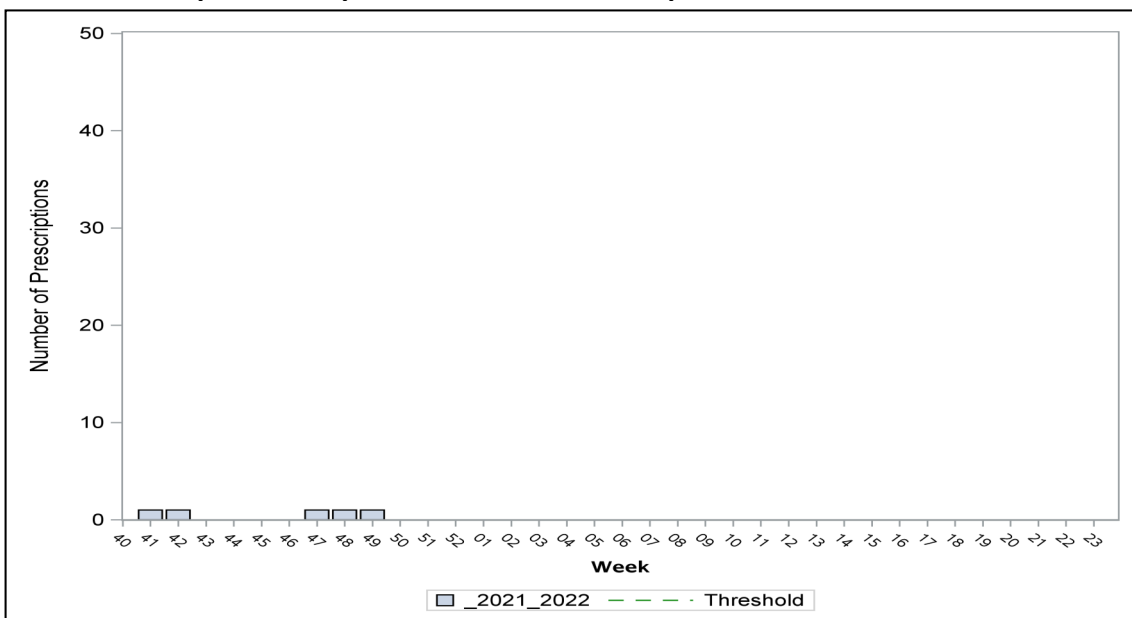

# Severity: Hospitalized Influenza Metrics (2021-2022 Season: Week 49)

- There was one laboratory-confirmed influenza hospitalization (influenza A H3N2) reported during week 49. The patient was a beneficiary in Virginia who was not co-infected with SARS-CoV-2. Additional hospitalizations were just reported for previous weeks, bringing the total to 7 for the season (1 service member and 6 other beneficiaries).
- There were minimal inpatient influenza-specific antiviral prescriptions dispensed during week 49.
- Thresholds indicate one standard deviation above the overall weighted average during the season. However, there is not enough data for the season to calculate the threshold for the influenza-specific antiviral prescriptions metric.

## Hospitalized Laboratory-Positive Influenza Cases, All Beneficiaries

## Inpatient Dispensed Antivirals Prescriptions, All Beneficiaries

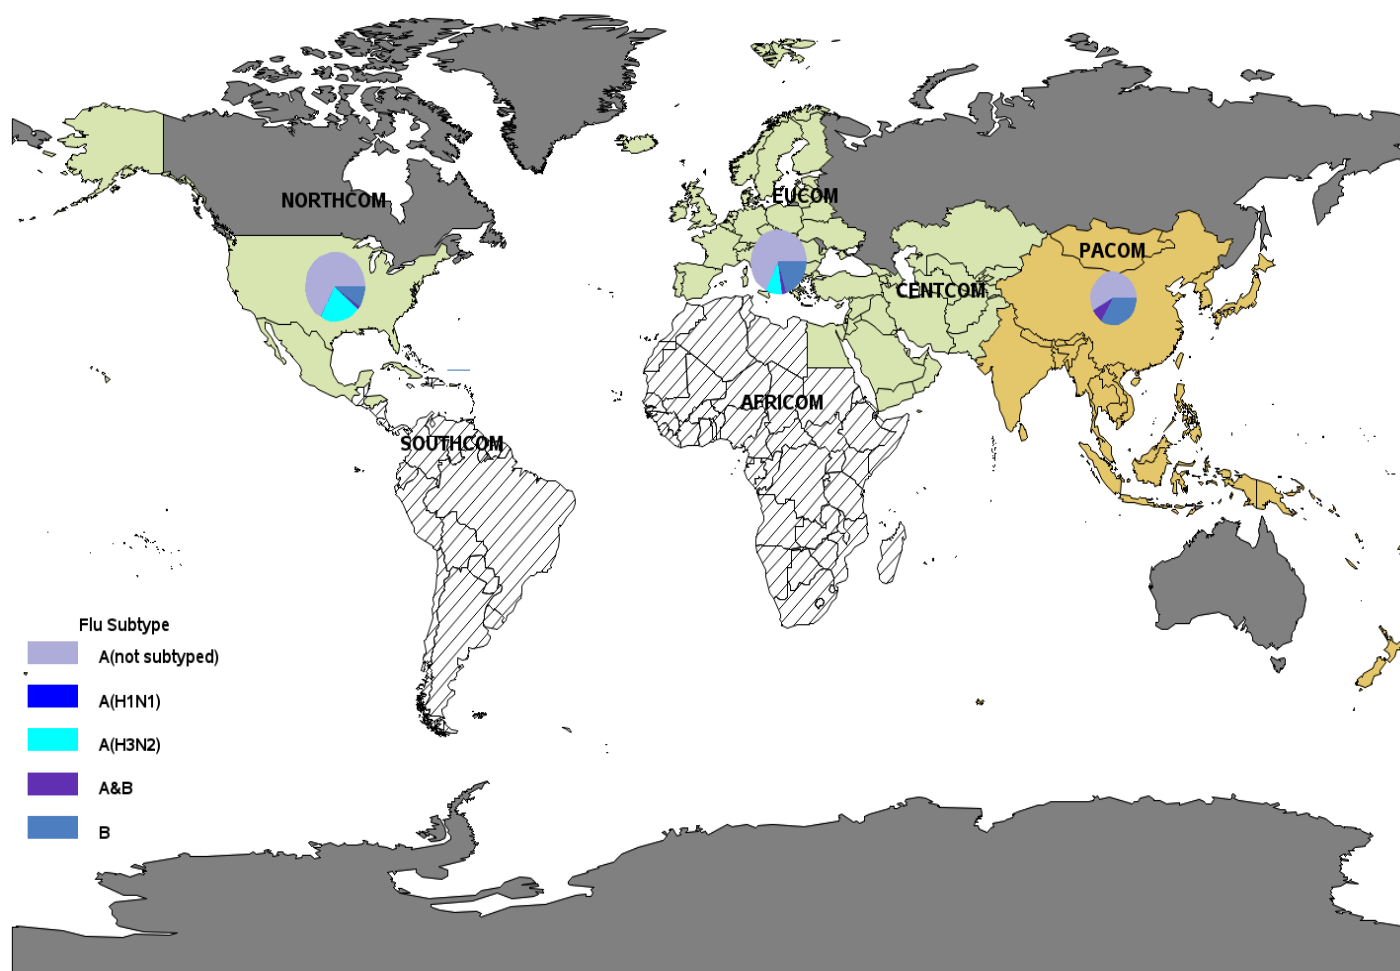

# Influenza Activity: Geographic Combatant Command

(2021-2022 Season: Week 49)

**\*\* The COVID-19 mitigation efforts occurring across the world may impact ILI activity levels.**

- NORTHCOM: ILI activity was minimal. The majority of laboratory-confirmed influenza cases have been Influenza A (not sub-typed).
- EUCOM: ILI activity was minimal. Only a small number of influenza positive specimens have been reported for the season. The majority have been Influenza A (not subtyped).
- INDOPACOM: ILI activity was low. Influenza A (not subtyped) predominated among the few laboratory-confirmed influenza positive specimens that were reported.
- SOUTHCOM: ILI activity was minimal. No specimens have tested positive for influenza this season.
- CENTCOM: ILI activity was minimal.

## ILI Activity (Service Members) and Laboratory-Confirmed Influenza (All Beneficiaries)

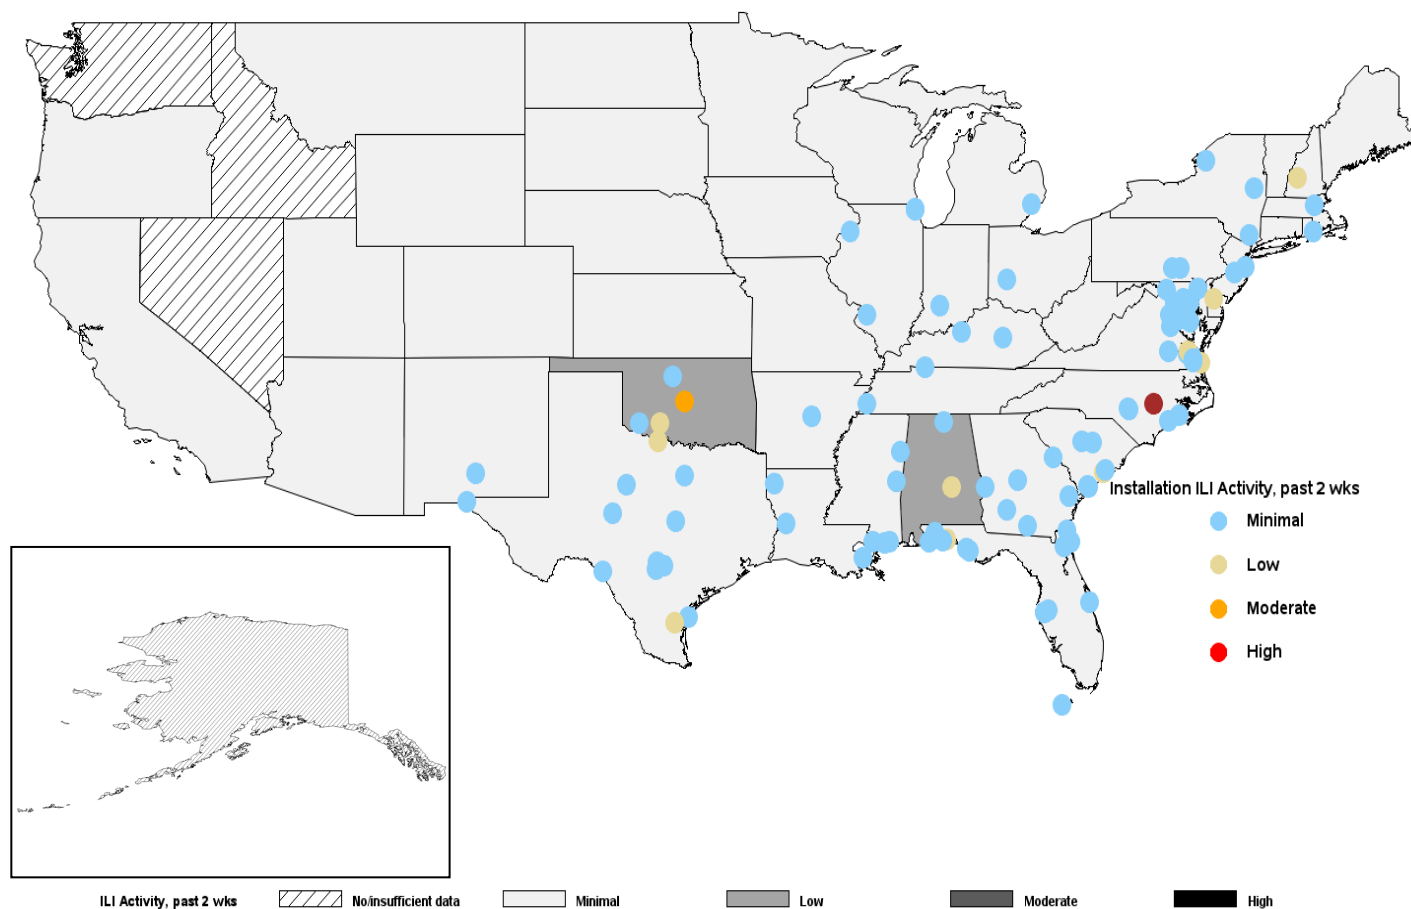

\*Locations colored in dark gray have no Service Member medical encounter data.

# Influenza Activity: NORTHCOM (2021-2022 Season: Week 49)

**\*\* The COVID-19 mitigation efforts occurring across the world may impact ILI activity levels.**

- A majority of installations and states with available data had minimal to low ILI activity during week 49. Seymour Johnson Air Force Base had high activity, while Tinker Air Force Base had moderate activity.
- Due to delays in receiving MHS GENESIS data, installations using MHS GENESIS will not have 2-week ILI activity data.
- State level data includes both Military Treatment Facility (MTF) and outsourced care. Therefore, state activity levels may differ from the installation level data.

## ILI Activity (Service Members) by State and Installation

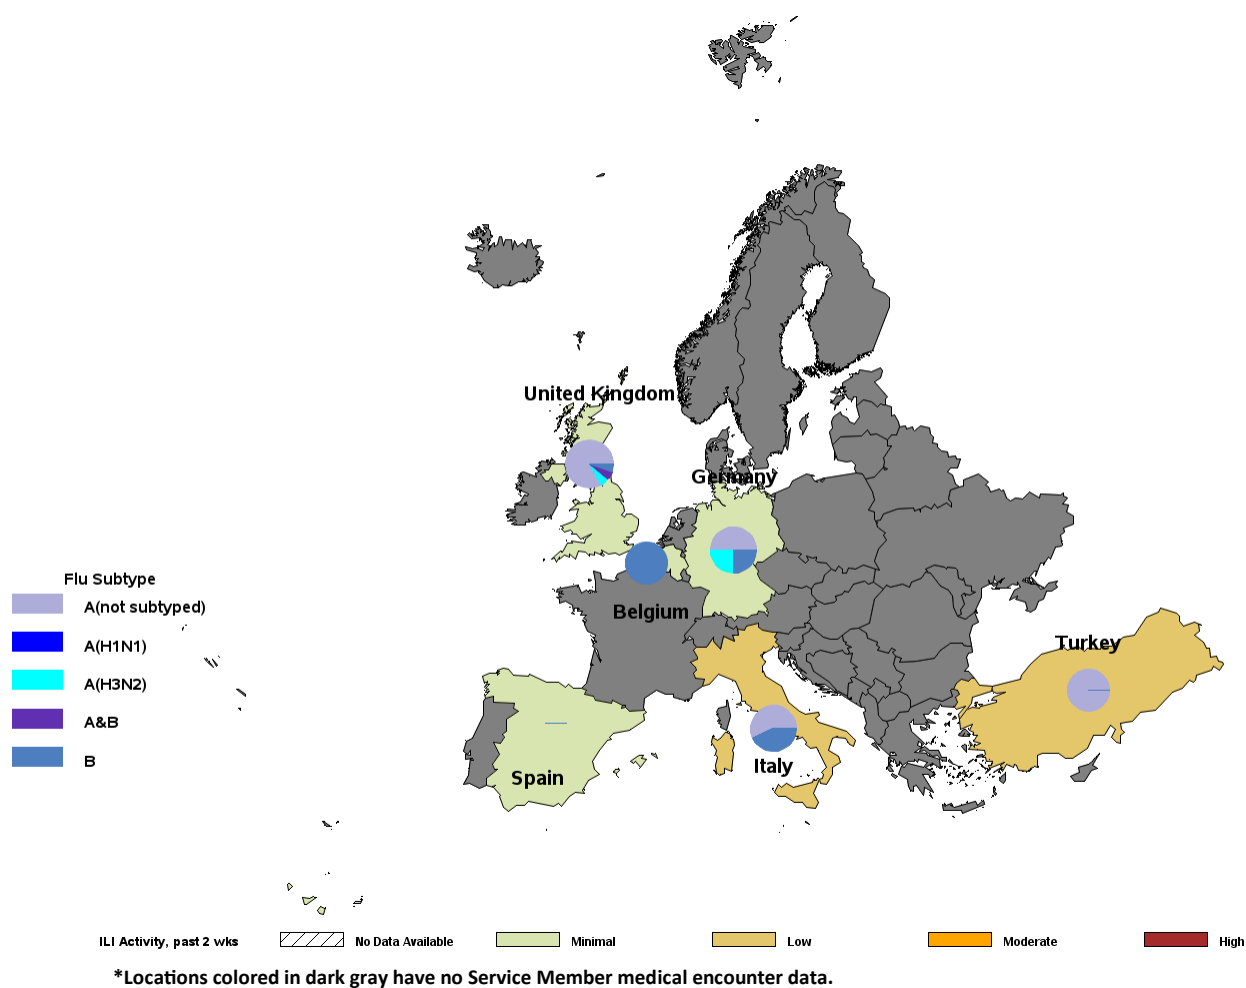

# Influenza and COVID-19 Activity: EUCOM (2021-2022 Season: Week 49)

**\*\* The COVID-19 mitigation efforts occurring across the world may impact ILI activity levels.**

- ILI activity was low in Italy and Turkey and minimal in all other countries with available data.
- Only a small number of laboratory-confirmed influenza cases have been reported for EUCOM this season.
- Installation-level laboratory-confirmed influenza and COVID-19 case data for EUCOM can be found on page 9 of the report.

## ILI Activity (Service Members) and Laboratory-Confirmed Influenza (All Beneficiaries)

# Influenza Activity: INDOPACOM (2021-2022 Season: Week 49)

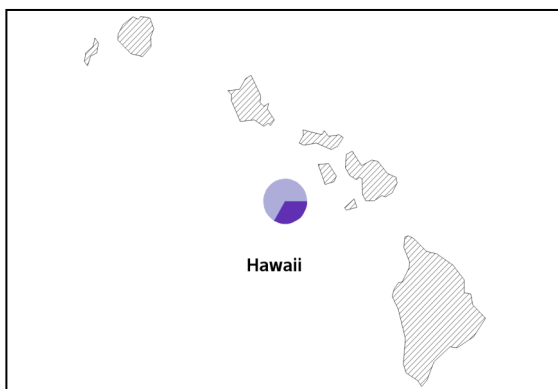

**\*\* The COVID-19 mitigation efforts occurring across the world may impact ILI activity levels.**

- ILI activity was low in Japan and minimal in all other countries with available data.
- Installation-level laboratory-confirmed influenza and COVID-19 case data for INDOPACOM can be found on page 11 of the report.

## ILI Activity (Service Members) and Laboratory-Confirmed Influenza (All Beneficiaries)

# Influenza Activity: SOUTHCOM (2021-2022 Season: Week 49)

**\*\* The COVID-19 mitigation efforts occurring across the world may impact ILI activity levels.**

- ILI activity was minimal in Cuba and low in Honduras.
- No laboratory-confirmed influenza cases have been reported for SOUTHCOM for the 2021-2022 season.

## ILI Activity (Service Members) and Laboratory-Confirmed Influenza (All Beneficiaries)

\*Locations colored in dark gray have no Service Member medical encounter data.

# Surveillance Programs and Data Sources

## Defense Health Agency / Armed Forces Health Surveillance Division (AFHSD):

The Armed Forces Health Surveillance Division (AFHSD) is the central epidemiologic resource for the U.S. Armed Forces, conducting medical surveillance to protect those who serve our nation in uniform and allies who are critical to our national security interests. The Epidemiology and Analysis Section of AFHSD, the Epi Data Center of the Navy and Marine Corps Public Health Center, and the Air Force Satellite Office in Dayton, Ohio (Wright-Patterson AFB) have compiled data for this report from the following sources below.

## Influenza-like Illness Activity:

Medical encounter and demographic data from the AFHSD's Defense Medical Surveillance System (DMSS) are used to generate portions of this report. ICD-10 codes from outpatient encounters are used to identify influenza-like illness (ILI). ILI is defined using the following codes: B97.89, H66.9, H66.90, H66.91, H66.92, H66.93, J00, J01.9, J01.90, J06.9, J09, J09.X, J09.X1, J09.X2, J09.X3, J09.X9, J10, J10.0, J10.00, J10.01, J10.08, J10.1, J10.2, J10.8, J10.81, J10.82, J10.83, J10.89, J11, J11.0, J11.00, J11.08, J11.1, J11.2, J11.8, J11.81, J11.82, J11.83, J11.89, J12.89, J12.9, J18, J18.1, J18.8, J18.9, J20.9, J40, R05, R50.9.

The percentage of all outpatient visits that have an ILI code is calculated each week for all service members, regardless of component. These data are presented weekly for the current season and compared to the four prior seasons among service members. Influenza activity levels are calculated by comparing the mean reported percent of visits due to ILI for the previous two weeks to the mean reported percent of visits due to ILI during baseline weeks (defined as non-influenza weeks (weeks 22-39) over the past 3 years). Since the 2020-2021 influenza season was nearly non-existent due to COVID-19 mitigation efforts, this season was excluded from the baseline calculations. The baseline weeks for the 2021-2022 report are from the years 2018, 2019, and 2020. There are four influenza activity levels, minimal, low, moderate, and high. The activity level corresponds to the number of standard deviations (SD) below, at or above the mean for the current 2 week period compared to the mean of the baseline weeks. Minimal activity corresponds to an influenza percentage that is less than 2 SD above the mean. Low activity corresponds to an influenza percentage that is equal to or greater than 2 SD above the mean, but less than 4 SD above the mean. Moderate activity corresponds to an influenza percentage that is equal to or greater than 4 SD above the mean, but less than 6 SD above the mean. High activity corresponds to an influenza percentage that is equal to or greater than 6 SD above the mean.

Influenza activity levels are presented in the Combatant Command (CCMD) maps, either by Installation, state, or country.

## Influenza Positive Specimens:

Influenza lab results (HL-7 formatted data) are compiled and transmitted from the Navy and Marine Corps Public Health Center to AFHSD. Results obtained via PCR, viral culture, and rapid influenza assays are reported. Although the inclusion of rapid tests may underestimate the weekly and cumulative percent positive estimates due to false negatives, visibility of the positive rapid results provides valuable information for this surveillance report. Influenza types/subtypes are categorized as influenza A/not subtyped, influenza A(H1N1), influenza A(H3N2), influenza A and B co-infection, and influenza B. Additionally, laboratory-confirmed positive results are used to identify influenza-related hospitalization cases across the DoD.

The percent positivity is calculated by dividing the number of influenza positive specimens by the total number of specimens (positive and negative only; inconclusive results are excluded). The distributions of percent positive specimens by subtype are presented on a weekly basis for the entire influenza season. For each CCMD state, the distribution of subtypes for the previous 2 weeks are presented as pie graphs for states and countries. For installations, data are presented in tables with counts and percent positive by subtype for the past 2 weeks and for the entire season. The "change from last report" column reports the absolute difference in the percent positive from the prior week's report to the current week's report.

# Surveillance Programs and Data Sources

## **COVID-19 Cases:**

COVID-19 case data are compiled from the COVID-19 positive lab results (HL-7 formatted data) and cases reported in the DRSi. The percent positivity calculation is restricted to only COVID-19 cases reported through the lab data so that an accurate denominator can be obtained. The percent positivity is calculated by dividing the number of COVID-19 positive specimens by the total number of specimens tested for COVID-19. For installations, COVID-19 case data are presented in tables with case counts for the past 2 weeks and for the entire influenza season (Week 40 to current). The “change from last report” column reports the absolute difference in the number of COVID-19 case counts from the prior week’s report to the current week’s report.

## **Pharmacy Transactions for Dispensed Influenza Antiviral Prescriptions:**

HL7-formatted pharmacy transactions are used to assess the number of dispensed influenza antiviral (AV) prescriptions. Four influenza AV medications approved by the Food and Drug Administration (FDA) are recommended by the CDC for use in the United States (US) for the 2019-2020 influenza season: oral oseltamivir (Tamiflu® or generic), inhaled zanamivir (Relenza®), and intravenous peramivir (Rapivab®), and baloxavir marboxil (Xofluza®). These prescriptions are included in this surveillance. The overall count of dispensed AV prescriptions by week is presented graphically for the influenza season. A seasonal baseline is displayed with dispensed AV prescriptions. Surveillance thresholds are displayed with the count of inpatient dispensed AV prescriptions. Additionally, counts of inpatient dispensed influenza AV prescriptions are presented weekly for the influenza season.

## **Influenza Baselines, Thresholds, and Trends:**

Weekly baselines used a three-year average to compare results with those from the same week during the previous three seasons. Since the 2020-2021 influenza season was nearly non-existent due to COVID-19 mitigation efforts, this season was excluded from the baseline calculations. The baseline calculations used the 2017-2018, 2018-2019, and 2019-2020 season data. Bands for one and two standard deviations above seasonal baseline estimates are displayed to indicate when trends diverge with respect to timing or volume from those of recent seasons. The ILI, lab, and dispensed AV prescription data thresholds are calculated by adding two standard deviations to the off-season average.

Inpatient thresholds (lab and dispensed AV prescription data) are calculated by adding one standard deviation to the overall weighted average for in-season weeks. Weeks that represent at least 2% of the total season’s laboratory-positive influenza cases for at least two consecutive weeks was considered to be “in-season” or influenza weeks; all other weeks are considered to be “off-season” or non-influenza weeks.
