Introduction

The 2019 Adult Health Care Survey of Department of Defense Beneficiaries (HCSDB) is the primary tool with which the Defense Health Agency (DHA) of the Assistant Secretary of Defense (Health Affairs) monitors the opinions and experiences of military health system (MHS) beneficiaries. Specifically, the HCSDB is designed to answer the following questions:

- How satisfied are DoD beneficiaries with their health care and their health plan?
- How does overall satisfaction with military treatment facilities (MTFs) compare with satisfaction with civilian treatment facilities (CTFs)?
- Does access to military and civilian facilities meet TRICARE standards?
- Is beneficiaries’ use of preventive health care services in line with national goals, such as those outlined in Healthy People 2020?
- Has beneficiaries’ use of MHS services changed over time?
- What aspects of MHS care contribute most to beneficiary satisfaction with their health care experiences? With which aspects are beneficiaries least satisfied?
- What are the demographic characteristics of MHS beneficiaries?

The HCSDB was conducted annually from 1995 to 2000, after which time the survey was administered quarterly. The current HCSDB is a quarterly internet and mail survey of a representative sample of MHS beneficiaries. It is sponsored by the DHA in the Office of the Assistant Secretary of Defense (Health Affairs) [OASD (HA)] under authority of the National Defense Authorization Act for Fiscal Year 1993 (P.L. 102-484). Altarum Institute prepares the sampling frame, which consists of variables specified by Mathematica for each MHS beneficiary in the Defense Enrollment Eligibility Reporting System (DEERS) database on a specified reference date. DEERS includes everyone who is eligible for a MHS benefit (i.e., everyone in the Uniformed Services — Army, Air Force, Navy, Marine Corps, Coast Guard, the Commissioned Corps of the Public Health Service, National Oceanic and Atmospheric Administration, Guard/Reserve personnel who are activated for more than 30 days – and other special categories of people who qualify for benefits). DEERS includes those on active duty, those retired from military careers, immediate family members of people in the previous two categories, and surviving family members of people in these categories.

In the first three quarters of FY 2019, Mathematica identified a representative sample of approximately 100,000 adult beneficiaries. Altarum administers the web survey each quarter. Ipsos, the survey contractor, administers the paper survey each quarter. Mathematica analyzes the survey data, reports on the results and prepares a quarterly public use file, as well as a Codebook and Users’ Guide to describe the quarterly dataset. Mathematica also prepares an annual public use dataset and relevant documentation each year.

This manual is designed to serve as a reference for analysts in OASD (HA) as they interpret the survey findings and prepare briefings. This manual provides detailed documentation on the following: naming conventions for variables, editing procedures, selection of records, computation of response rates, recoding of variables, computation of weights, variance estimation, and construction of tables.
and charts for the reports. This manual also enables an analyst to follow, and if desired, to replicate the step-by-step processing of the raw survey data to produce the final database.

A. OVERVIEW OF THE HCSDB

1. Sample Design

The 2019 adult sample is comprised of 100,000 adult beneficiaries selected each quarter via stratified random sample. Stratification is based on three variables: analytical group, geographic area, and enrollment/beneficiary type. The analytical group stratification is determined in cooperation with DHA staff, and is important to data users and policymakers. The criteria for the analytical group stratification is the following: (1) beneficiaries younger than 65, enrolled with a military primary care manager (PCM), or active duty beneficiaries; (2) beneficiaries younger than 65, who use Managed Care Support Contractors; (3) beneficiaries younger than 65, who use TRICARE Select; (4) beneficiaries enrolled in TRICARE Reserve Select; (5) beneficiaries age 65 or older. Note that on January 1, 2018, TRICARE Select replaced TRICARE Standard/Extra. This change is reflected in the questionnaires for FY 2019.

The geographic area stratification includes military treatment facilities (MTFs) in which DHA is interested, TNEX regions for those enrolled in other MTFs, and TNEX regions for all other beneficiaries.

The enrollment/beneficiary type includes (1) active duty; (2) active duty family members enrolled in Prime with a civilian PCM; (3) active duty family members enrolled in Prime with a military PCM; (4) active duty family members not enrolled in Prime; (5) retirees and their family members younger than 65 enrolled in Prime with a civilian PCM; (6) retirees and their family members younger than 65 enrolled in Prime with a military PCM; (7) retirees and their family members younger than 65 not enrolled in Prime; (8) retirees and their family members age 65 and older; and (9) beneficiaries enrolled in TRICARE Reserve Select.

The sample selection process involves five steps: (1) construction of the sampling frame and definition of sampling strata; (2) allocation of the sample to strata to satisfy the study’s precision goals; (3) selection of the survey sample using a permanent random number sample selection algorithm; (4) creation of the sampling weights, which reflect the probability of selection; and (5) verification of results to ensure that sampling was implemented as specified. Please see Mathematica’s “Health Care Survey of DoD Beneficiaries: 2019 Adult Sampling Report” (2019) for details on sample design.

2. 2019 Adult HCSDB

The HCSDB questionnaire was converted from an annual to a quarterly survey in 2000, and is fielded each quarter to a representative sample of MHS beneficiaries. Beginning with 2006, reporting and documentation of the HCSDB has been performed on a fiscal year basis, whereas in previous years, it was based on calendar years. In FY 2019, surveys were fielded in three quarters instead of four, describing a period from October 2018 to May 2019. Thus, this document, the “2019 Health Care Survey of DoD Beneficiaries: Adult Technical Manual”, describes Quarters I-III of fiscal year 2019. Throughout this document, Quarter I, 2019 refers to Quarter I of fiscal year 2019. The adult questionnaires for Quarters I-III are reproduced in Appendix A. The 2019 survey consists of an unchanging core questionnaire with different quarterly supplements.

The core adult questionnaire includes the following topics:

- Use of health care
- Use of preventive health care
- Type of health plan covering the beneficiary
Beginning in 2002, the survey naming convention was changed. Prior to 2000, the year in the survey's name reflected the year that respondents were asked to think about when answering the questions. For example, although the 2000 HCSDB was fielded in 2001, it asked beneficiaries to think about the prior 12 months (mostly 2000) as the reference period for their answer. Under the new naming convention, the survey title refers to the year the questionnaires are fielded, so last year’s survey was the 2018 HCSDB and this year’s survey is the 2019 HCSDB. Because of the name change, there is no “2001” survey, even though the questionnaire was administered continuously in each quarter of 2001.

3. Survey Response – Quarters I-III

In each of the three quarters in 2019 in which the survey was fielded, Ipsos sent survey invitation letters to a random sample of approximately 100,000 adult MHS beneficiaries. The letters instructed sampled beneficiaries to complete the survey on a website hosted by Altarum. During the survey field period in all three quarters of the 2019 HCSDB, Mathematica selected a sample of nonrespondents, and Ipsos mailed surveys to this group. All other beneficiaries were asked to complete the survey on a website. By the end of the fielding period in Quarter I, 8.8 percent of the sample members completed the survey. In Quarter II, 9.2 percent of the sample members completed surveys. In Quarter III, 8.6 percent of the sample members completed surveys. Information pertaining to how Mathematica calculated these response rates is presented in Chapter 3.

It should be noted that the above cited response rates do not reflect late arriving responses from the surveys fielded in the first two quarters. The response rates are based on the number of completed surveys returned to the survey vendor at the end of the fielding period. The annual combined dataset, however, includes the surveys returned after the end of the fielding period. Therefore, the revised annual response rates were 8.8 percent for Quarter I, 9.3 percent for Quarter II, and 8.9 percent for the combined annual dataset.

4. Database Development

Mathematica cleans the data, selects records for inclusion in the final database, and constructs variables to be used in reports. To ensure that the survey data are representative of the DEERS population, Mathematica develops weights to take account of the initial sampling, the sampled individuals who chose not to respond to the survey, and post-stratification if the beneficiary's key information is updated.

5. Reports

Mathematica analyzes the data and produces several reports explaining findings on topics including satisfaction, access to care, health care use, and use of preventive services. These reports will be available on the TRICARE website at http://www.TRICARE.mil:

- 2019 TRICARE Beneficiary Reports and Purchased Care TRICARE Beneficiary Reports
- 2019 TRICARE Consumer Watch and Purchased Care TRICARE Consumer Watch
- Health Care Survey of DoD Beneficiaries: Issue Briefs
- Health Care Survey of DoD Beneficiaries: Annual Report (not available on TRICARE website)
B. ORGANIZATION OF THIS MANUAL

Chapter 2 explains how the database was developed. It covers naming conventions, cleaning procedures, record selection criteria, descriptions of all variable types, definitions of each constructed variable, and weighting procedures. Chapter 3 describes how the database was analyzed. This includes rules for calculating response rates, the development of table and chart specifications for the Health Care Survey of DoD Beneficiaries (The HCSDB Annual Report, TRICARE Beneficiary Reports and TRICARE Consumer Watch), an explanation of the dependent variables and independent variables used in regression analyses, and the methodology for estimating the variance of estimates. The manual concludes with a series of technical appendices:

- Appendix A: Annotated questionnaires – Quarters I-III
- Appendix B: Coding Scheme and Coding Tables – Quarters I-III
- Appendix C: Mapping the Military Treatment Facility (MTF) to the Catchment Area
- Appendix D: Response Rate Tables – Quarters I-III and Combined Annual
- Appendix E: Technical Description of the 2019 TRICARE Beneficiary Reports
- Appendix F: SAS Code for File Development – Quarters I-III
- Appendix G: SAS Code for Statistical and Web Specifications for the 2019 TRICARE Beneficiary Reports and Purchased Care Beneficiary Reports
- Appendix I: SAS Code for 2019 TRICARE Purchased Care Consumer Watch – Quarters I-III
This chapter explains the process of developing a final database free of inconsistencies and ready for analysis from the raw survey data. We discuss the design of the database; cleaning, editing, and implementation of the Coding Scheme; record selection; and variable construction.

A. DATABASE DESIGN

The 2019 Adult HCSDB consists of variables from various sources. When Ipsos delivers the file to Mathematica after fielding the sample, the following types of variables are present:

- DEERS information on beneficiary group, social security number (SSN), sex, age, etc.
- Sampling variables used to place beneficiaries in appropriate strata
- Core and supplemental questionnaire responses
- Ipsos’ information from fielding the sample, such as scan date and flags developed during the fielding to assist us in determining eligibility

Mathematica removes all identifying information such as SSN to protect the confidentiality of the respondents. Mathematica then adds the following types of variables to the database:

- Coding Scheme flags - The coding scheme program checks for consistencies in responses and skip patterns. If there are inconsistencies found or skip patterns that do not match the directions specified in the questionnaire then responses will be recoded to match the coding scheme specifications. Coding scheme flags are created to crosswalk original responses to possible recodes in order to understand how skip logic is being filled out.
- Constructed variables for analysis
- Weights

In addition, Mathematica updates and cleans the questionnaire responses using the Coding Scheme tables found in Appendix B. The final public use database each quarter will contain only the recoded responses, to prevent usage of an uncleaned response for analysis. We structured the final database so that all variables from a particular source are grouped by position. Table 2.1 lists all variables with the exception of the replicate weights in the 2019 Adult HCSDB database by source. For specific information on variable location within the database, refer to the “2019 Health Care Survey of DoD Beneficiaries: Adult Codebook and User’s Guide.”

1. Data Sources

   a. DEERS

Altarum provided the sampling frame to Mathematica prior to the selection of the sample. DEERS information such as sex, date of birth, and service are retained in the database; this data is current as of the time of sample selection.
b. **Sampling Variables**

Mathematica developed variables during the sample selection procedure that were instrumental in placing beneficiaries in appropriate strata. Many of the variables are retained in the database.

c. **Questionnaire Responses**

These variables represent the cleaned values for all responses to the questionnaire. The original values scanned in by Ipsos are cleaned and recoded, as necessary, to ensure that responses are consistent throughout the questionnaire. The Coding Scheme tables found in Appendix B are the basis for insuring data quality.

d. **Survey Fielding Variables**

In the process of fielding the survey, Ipsos created a number of variables that we retain in the database. Some of these variables, for example, information that came in by phone, assist us in determining eligibility.

e. **Coding Scheme Flags**

Each table of the Coding Scheme (see Appendix B) has a flag associated with it that indicates the pattern of original responses and any recoding that was done. For example, the table for Note 5 has a flag N5.

f. **Constructed Variables**

Mathematica constructed additional variables that were used in the TRICARE Beneficiary Reports, TRICARE Consumer Watch, and the “Health Care Survey of DoD Beneficiaries: Annual Report.” Often these variables were regroupings of questionnaire responses or the creation of a binary variable to indicate whether or not a TRICARE standard was met. Complete information on each constructed variable is found in Chapter 2, Section D.

g. **Weights**

Mathematica developed weights for each record in the final database. Weights are required for the following reasons:

- To compensate for variable probabilities of selection
- To adjust for differential response rates
- To improve the precision of survey-based estimates through post stratification, a method for adjusting the sampling weights such that the joint distribution of a set of post-stratifying variables matches the known population joint distribution.

Weighting procedures are discussed in Chapter 2, Section E.

2. Variable Naming Conventions

To preserve continuity with survey data from previous years, Mathematica followed the same variable naming conventions for the core questions used for all years of the survey data. Variable naming conventions for the 2019 Adult HCSDB core and supplemental questions, shown in Table 2.2, correspond to those of previous years. The suffix "_O" will be used to distinguish the original version of the variable from the recoded version. The public use files for the adult survey will contain only recoded variables.

Variables created from most core survey questions begin with the character “H.” The next two characters are the third and fourth digits of the survey year. A small number of self-reported demographic variables begin with the characters “SR.”

Each quarter, the questionnaire includes a battery of questions on specific health care topics concerning services offered to MHS beneficiaries. Supplemental questions contain the same number of alphanumeric characters as the core questions; each variable begins with an “S” to distinguish it as a supplemental question.

B. CLEANING AND EDITING

Data cleaning and editing procedures ensure that the data are free of inconsistencies and errors. Standard edit checks include the following:

- Checks for multiple surveys returned for any one person
- Range checks for appropriate values within a single question
- Logic checks for consistent responses throughout the questionnaire

We computed frequencies and cross tabulations of values at various stages in the process to verify the accuracy of the data. Data editing and cleaning proceeded in the following way:

1. Additional Ipsos Editing and Coding

In preparing the database for Mathematica, Ipsos used variable names and response values provided by Mathematica in the annotated questionnaires (see Appendix A). Ipsos delivered to Mathematica a database in SAS format. In this database, any questions with no response were encoded with a SAS missing value code of ‘.’.

2. Removal of Sensitive or Confidential Information

The file that Mathematica received from Ipsos contained sensitive information such as Social Security Number (SSN). Any confidential information was immediately removed from the file. Each beneficiary had already been given a generic ID (MPRID) substitute during sample selection, and the MPRID was retained as a means to uniquely identify each individual.

3. Initial Frequencies

Mathematica computed frequencies for all fields in the original data file. These tabulations served as a reference for the file in its original form and allowed comparison to final frequencies from previous years, helping to pinpoint problem areas that needed cleaning and editing. Mathematica examined these frequencies and cross-tabulations, using the results to adapt and modify the cleaning and editing specifications as necessary.
4. Data Cleaning and Recoding of Variables

Mathematica’s plan for data quality is found in the 2019 Adult Coding Scheme for Quarters I-III. It contains detailed instructions for all editing procedures used to correct data inconsistencies and errors. The Coding Scheme tables for Quarters I-III are found in Appendix B. These tables outline in detail the approach for recoding self-reported fields, range checks, logic checks, and skip pattern checks to ensure that responses are consistent throughout the questionnaire. The Coding Scheme tables specify all possible original responses and any recoding, also indicating if backward coding or forward coding was used. Every skip pattern is assigned a note number shown in the annotated questionnaire (Appendix A). This note number defines the flag (for example, the Note 5 flag is N5) that is set to indicate the pattern of the original responses and any recoding. Thus, if the value of N5 is 2, the reader can look at line 2 in the Note 5 table for the original and recoded response values.

The SAS programs implementing the Coding Scheme for each quarter are found in Appendix F.

a. Check Self-Reported Fields

Several survey questions seek information that can be verified with DEERS data and/or sampling variables. Nevertheless, in recoding these self-reported fields (such as sex and TRICARE enrollment) we used the questionnaire responses. However, if responses were missing, we used the DEERS data. For example, if the question on the sex of the beneficiary was not answered, the recoded variable for self-reported sex was not considered missing but was given the DEERS value for sex. If there was any disagreement between questionnaire responses and DEERS data, the questionnaire response generally took precedence.

In many tables and charts in the reports, the DEERS information was used for active duty status and TRICARE enrollment.

b. Skip Pattern Checks

At several points in the survey, the respondent should skip certain questions that are not applicable. If the response pattern is inconsistent with the skip pattern, each response in the series was checked to determine which was most accurate, given the answers to other questions. Questions that were appropriately skipped were set to the SAS missing value of ‘.N’. Inconsistent responses, such as answering questions that should be skipped or not answering questions that should be answered, were examined for patterns that could be resolved. Frequently, responses to subsequent questions provide the information needed to infer the response to a question that was left blank. The 2019 Adult Coding Scheme for Quarters I-III (see Appendix B) specifically addresses every skip pattern and shows the recoded values for variables within each pattern; we back coded and/or forward coded to ensure that all responses are consistent within a sequence.

c. Missing Values

Ipsos initially encoded any question with a missing response to a SAS missing value code of ‘.’. After verifying skip patterns, Mathematica recoded some of these responses to reflect valid skips (SAS missing value code of ‘.N’). The complete list of codes for types of missing values, such as incomplete grids or questions that should not have been answered, is shown in Table 2.3.

Occasionally, missing questionnaire responses can be inferred by examining other responses. For example, if a respondent fails to answer H19025 about getting care from a doctor or other health provider besides his/her personal doctor, but goes on to answer how often his/her personal doctor seemed informed and up-to-date about the care received from these doctors or providers, then we assume that the answer to H19025 should have been “yes.” Using this technique, we recoded some missing questionnaire responses to legitimate responses.
d. Logic Checks

Most logic problems are due to inconsistent skip patterns, for example, when a male answers a question intended for females only. These types of internal inconsistencies were resolved in the same manner as skip pattern inconsistencies — by looking at the answers to all related questions. For instance, several questions related to smoking were examined as a group to determine the most appropriate response pattern so that any inconsistent response could be reconciled to the other responses in the group.

5. Quality Assurance

Mathematica created an edit flag for each Coding Scheme table that indicates what edits, if any, were made during the cleaning and editing process. This process was also used in previous years; variables such as N5 (see Appendix B) indicate exactly what pattern of the Coding Scheme was followed for a particular set of responses. These edit flags have a unique value for each set of original and recoded values, allowing us to match original values and recoded values for any particular sequence.

In order to validate the editing and cleaning process, Mathematica prepared cross-tabulations between the original variables and the recoded variables with the corresponding edit flag. This revealed any discrepancies that needed to be addressed. In addition, we compared unweighted frequencies of each variable with the frequencies from the original file to verify that each variable was accurately recoded. Mathematica reviewed these tabulations for each variable in the survey. If necessary, the earlier edit procedures were modified and the Coding Scheme program rerun. Additionally, all programs and program output files were code reviewed by Mathematica. The resulting file was clean and ready for analysis.

C. RECORD SELECTION

To select final records, we first defined a code that classifies each sampled beneficiary as to his/her final response status. To determine this response status, we used postal delivery information provided by Ipsos for each sampled beneficiary. This information is contained in the FLAG_FIN variable which is described in Table 2.4.
<table>

</tbody>
</table>

Using the above variables in Table 2.4, we classified all sampled beneficiaries into four groups:

- **Group 1**: Eligible, Questionnaire Returned. Beneficiaries who were eligible for the survey and returned a questionnaire with at least one question answered (FLAG_FIN = 1)
- **Group 2**: Eligible, Questionnaire Not Returned (or returned blank). Beneficiaries who did not complete a questionnaire but who were determined to be eligible for military health care by the reference date, that is, not deceased, not incarcerated, not permanently hospitalized (FLAG_FIN = 3, 6, 8, 10, 11, 14, 16, 21, 23, 24)
Group 3: Ineligible Beneficiaries who were ineligible because of death, institutionalization, or no longer being in the MHS as of the reference date (FLAG_FIN = 2, 4, 5, 7, 12, 13, 15, 25, 26)

Group 4: Eligibility Unknown. Beneficiaries who did not complete a questionnaire and for whom survey eligibility could not be determined (FLAG_FIN = 9, 17, 18, 19, 20, 22)

Group 1 was then divided into two subgroups according to the number of survey items completed (or legitimately skipped), out of 20 key questions:

- G1-1. Complete questionnaire returned – at least 50% (more than 9) of the key questions completed
- G1-2. Incomplete questionnaire returned – completed fewer than 50% of the key questions

The 20 key questions for HCSDB were adapted from the complete questionnaire rule developed by Agency for Healthcare Research and Quality (AHRQ) for Consumer Assessment of Healthcare Providers and Systems (CAHPS) V5 surveys. The key survey variables for the 2019 HCSDB are: H19003, H19005, H19006, H19009, H19013, H19018, H19019, H19027, H19028, H19031, H19033, H19040, H19043, H19048, H19051, H19052, H19065, H19073, SREDA, and the race indicator variables (SRRACEA-SRRACEE).

Group 3 was also divided into two subgroups according to how ineligible beneficiaries were identified:

- G3-1. Returned ineligible or no return ineligible (FLAG_FIN = 2, 4, 5, 7, 12, 13, 15)
- G3-2. Ineligible at time of Altarum address update (FLAG_FIN = 25, 26)

G3-1 consists of ineligible beneficiaries who responded to the survey request, but told us they were ineligible. G3-2 consists of beneficiaries identified as ineligible during the updating process.

Furthermore, we also subdivided Group 4 into the following:

- G4-1 for locatable-blank return/no reason or no return/no reason (FLAG_FIN = 9, 17, 22)
- G4-2 for nonlocatable-postal nondeliverable/no address, postal nondeliverable/had address, or original nonlocatable (FLAG_FIN = 18, 19, 20).

With these groups defined, we can calculate the location rate (see Chapter 3.A).

We classified all sampled beneficiaries using the following values for the final response/eligible status (FNSTATUS):

- 11 for G1-1
- 12 for G1-2
- 20 for Group 2
- 31 for G3-1
- 32 for G3-2
- 41 for G4-1
- 42 for G4-2

Only beneficiaries with FNSTATUS = 11 were retained in the final database. All other records were dropped. In Quarters I-III, we retained 26,917 respondents.
D. CONSTRUCTED VARIABLES

One of the most important aspects of database development is the formation of constructed variables and scale variables to support analysis. Constructed variables are formed when no single question in the survey defines the construct of interest. Table 2.1 lists all constructed variables for 2019. Each constructed variable is discussed in this section and the relevant piece of SAS code is shown. All SAS programs can be found in Appendix F.

1. Demographic Variables

a. Region (XREGION)

Catchment area codes are used to classify beneficiaries into lead agent's regions (CACSMPL is not retained in public use file to maintain confidentiality). These regions correspond to the administrative organization of TRICARE before reorganization in 2004. The XREGION variable partitions all catchment areas into non-overlapping regions and allows for reporting of catchment-level estimates in the catchment reports. The regions are defined as follows:

1 = Northeast
2 = Mid-Atlantic
3 = Southeast
4 = Gulf south
5 = Heartland
6 = Southwest
7, 8 = Central
9 = Southern California
10 = Golden Gate
11 = Northwest
12 = Hawaii
13 = Europe
14 = Western Pacific Command (Asia)
15 = TRICARE Latin America
16 = Alaska
17 = TNEX Region East
18 = TNEX Region West
. = Unassigned (CACSMPL = 9999)

For the purposes of our analysis, Region 7 and Region 8 were combined.

IF CACSMPL IN (0035, 0036, 0037, 0066, 0067, 0068, 0069, 0081, 0086, 0100, 0123, 0306, 0310, 0321, 0326, 0330, 0385, 0413, 6201, 6223) THEN XREGION= 1;
ELSE IF CACSMPL IN (0089, 0090, 0091, 0092, 0120, 0121, 0122, 0124, 0335, 0378, 0387, 0432, 0433, 0508, 7143, 7286, 7294) THEN XREGION= 2;

b. United States (USA)

XREGION is used to create USA, which classifies beneficiaries as residing either in the United States
or overseas.

1 = USA (including Alaska and Hawaii)
0 = Overseas

IF XREGION IN (1,2,3,4,5,6,7,8,9,10,11,12,16,18) THEN USA=1;
ELSE IF XREGION IN (13,14,15) THEN USA=0;
ELSE IF XREGION IN (. 17) THEN USA=.;

c. Overseas (XOCONUS)

XREGION is used to create XOCONUS, which classifies overseas beneficiaries by region, as
follows:
1 = Europe
2 = Western Pacific
3 = Latin America
. = In USA/Missing Region

IF XREGION=13 THEN XOCONUS=1;
ELSE IF XREGION=14 THEN XOCONUS=2;
ELSE IF XREGION=15 THEN XOCONUS=3;

d. TRICARE Next Generation of Contracts Region (XTNEXRG2)

XREGION is used to create XTNEXRG2, the TRICARE Next Generation of Contracts Region grouping, as follows:

1 = East
2 = West
3 = Overseas

IF XREGION IN (1,2,5,18) THEN XTNEXREG=1;
ELSE IF XREGION IN (3,4,6) THEN XTNEXREG=2;
ELSE IF XREGION IN (7,8,9,10,11,12,16) THEN XTNEXREG=3;

   ELSE XTNEXREG=.;
END;

IF XTNEXREG >1 THEN XTNEXRG2=XTNEXREG-1;
ELSE XTNEXRG2=XTNEXREG;

e. Out of Catchment Area (OUTCATCH)

CACSMPL is used create OUTCATCH, which classifies beneficiaries as residing either in or outside a catchment area.

1 = Out of catchment area
0 = In catchment area

/* OUTCATCH – OUT OF CATCHMENT AREA */
IF 9900 < CACSMPL < 9999 THEN OUTCATCH=1; /* Out of catchment area */
ELSE IF CACSMPL = 9999 THEN OUTCATCH=.;
ELSE OUTCATCH=0; /* Catchment area */

f. Defense Health Agency Service Flag (DHAFLAG)

DHAFLAG is used to classify facilities as being DHA service or not DHA service.

1 = DHA
0 = Not DHA

/* Create DHA flag */
IF PUT(CACSMPL, DHASRV.)='1' THEN DHAFLAG=1;
ELSE DHAFLAG=0;
g. Sex of Beneficiary (XSEXA)

XSEXA is constructed using self-reported sex, sex identified on the DEERS database (SEX), and answers to sex-specific questions.

1 = Male
2 = Female

/** Note 19a - gender H&YR.058, SEX, H&YR.059B--H&YR.064, XSEXA */
/* 1/21/98 use SRSEX & responses to gender specific questions if there is discrepancy between SRSEX and SEX */
/* set imputed FMALE and MALE based on gender specific questions */

ARRAY fmaleval H&YR.059B H&YR.060 H&YR.061 H&YR.062 H&YR.063 H&YR.064;

      N19a=6;
      XSEXA=.;
   END;
   ELSE IF (SEX=" " AND FMALE=0) THEN DO;
      N19a=7;
      XSEXA=.;
h. **Beneficiary Group (XBNFGRP)**

We redefined beneficiary groups to exclude any active duty personnel and any active duty family members who were age 65 or older at the time of survey administration. The variable XBNFGRP reconstructs beneficiary groups into the following values:

1 = Active Duty, under 65  
2 = Family members of active duty, under 65  
3 = Retirees, survivors, and family members, under 65  
4 = Retirees, survivors, and family members, 65 or over  
.= Unknown/other

/ * XBNFGRP-Beneficiary Group that excludes those 65 and over-Active Duty and Family Members of Active Duty */

IF ENBGSMPL ^= "b" THEN DO;
IF INPUT(FIELDAGE,8.) >= 65 AND INPUT(ENBGSMPL,8.) IN (1, 2, 3, 4) THEN XBNFGRP = .;  
ELSE IF INPUT(ENBGSMPL,8.) = 1 THEN XBNFGRP = 1;  /* Active Duty <65 */
ELSE IF INPUT(ENBGSMPL,8.) IN (2, 3, 4) THEN XBNFGRP = 2;  /* Family of Active <65 */
ELSE IF INPUT(ENBGSMPL,8.) IN (5, 6, 7) THEN XBNFGRP = 3;  /* Ret/Surv/Fam <65 */
ELSE IF INPUT(ENBGSMPL,8.) IN (8, 9, 10) THEN XBNFGRP = 4;  /* Ret/Surv/Fam 65+ */
ELSE IF INPUT(ENBGSMPL,8.) IN (11) THEN XBNFGRP = .;  
END;
i. **Service Affiliation (XSERVAFF)**

We redefined service affiliation to collapse Coast Guard, administrative, support contractor, Uniformed Services Treatment Facility (USTF), noncatchment, other, not available, missing/unknown service affiliations into a single other category. The variable XSERVAFF reconstructs service affiliation into the following values:

1 = Army
2 = Air Force
3 = Navy
4 = Other
5 = DHA

IF SERVAFF='A' THEN XSERVAFF=1; /*Army;*/
IF SERVAFF='F' THEN XSERVAFF=2; /*Air Force;*/
IF SERVAFF='N' THEN XSERVAFF=3; /*Navy;*/

/***Coast Guard, Administrative, Support Contractor, USTF, Noncatchment, Other, Not available, Missing/unknown will collapse to other per Eric Shone ***/

IF SERVAFF IN ('C' 'J' 'M' 'T' 'S' 'O' 'X' ' ') THEN XSERVAFF=4; /*Other;*/
IF SERVAFF ='P' THEN XSERVAFF=5;

2. **TRICARE Prime Enrollment and Insurance Coverage**

a. **TRICARE Prime Enrollment Status (XENRLLMT)**

For reporting purposes, a person is considered enrolled in TRICARE Prime if they are under 65 and the poststratification enrollment type (ENBGSMPL), based on DEERS information, indicates that they were enrolled at the time of data collection. Because it is important to view the experiences of active duty personnel separately from other enrollees, there is a separate category for active duty (under 65), who are automatically enrolled in Prime. The five categories for TRICARE Prime enrollment are as follows:

1 = Active duty, under 65
2 = Other enrollees, under 65
3 = Not enrolled in TRICARE Prime, under 65
4 = Not enrolled in TRICARE Prime, 65 or over
5 = Enrolled in TRICARE Prime, 65 or over
. = Unknown

/* XENRLLMT--ENROLLMENT STATUS */
IF ENBGSMPL ^= "b" THEN DO;
IF 17 <= INPUT(FIELDAGE,8.) < 65 THEN DO;
   IF INPUT(ENBGSMPL,8.) = 1 THEN XENRLLMT = 1; /* Active duty (<65) */
   ELSE IF INPUT(ENBGSMPL,8.) IN (2, 3, 5, 6) THEN XENRLLMT = 2; /* Non-active duty enrolled (<65) */
   ELSE IF INPUT(ENBGSMPL,8.) IN (4, 7,11) THEN XENRLLMT = 3; /* Not Enrolled (<65) */
   END;
ELSE IF INPUT(FIELDAGE,8.) >= 65 THEN DO;
   IF INPUT(ENBGSMPL,8.) = 10 THEN XENRLLMT = 4; /* Not Enrolled (65+) */
   ELSE IF INPUT(ENBGSMPL,8.) IN (8,9) THEN XENRLLMT = 5; /* Enrolled (65+) */
   END;
END;
b. **TRICARE Prime Enrollment Status by Primary Care Manager (XENR_PCM)**

Similar to the previous variable XENRLLMT, this variable separates the enrollees other than the active duty category into those with a military PCM and those with a civilian PCM. Active duty personnel are automatically enrolled and always have a military PCM. XENR_PCM has seven possible values:

1 = Active duty, under 65, military PCM  
2 = Other enrollees, under 65, military PCM  
3 = Other enrollees, under 65, civilian PCM  
4 = Not enrolled in TRICARE Prime, under 65  
5 = Not enrolled in TRICARE Prime, 65 or over  
6 = Enrolled in TRICARE Prime, 65 or over, military PCM  
7 = Enrolled in TRICARE Prime, 65 or over, civilian PCM  
. = Unknown

```/* XENR_PCM—ENROLLMENT BY PCM TYPE */
IF 17 <= INPUT(FIELDAGE,8.) < 65 THEN DO;
  IF INPUT(ENBGSMPL,8.) = 1 THEN XENR_PCM = 1; /* Active duty (<65) */
  ELSE IF INPUT(ENBGSMPL,8.) IN (3, 6) THEN XENR_PCM = 2; /* Enrolled (<65) - mil PCM */
  ELSE IF INPUT(ENBGSMPL,8.) IN (2, 5) THEN XENR_PCM = 3; /* Enrolled (<65) - civ PCM */
  ELSE IF INPUT(ENBGSMPL,8.) IN (4, 7, 11) THEN XENR_PCM = 4; /* Not Enrolled (<65) */
END;
ELSE IF INPUT(FIELDAGE,8.) >= 65 THEN DO;
  IF INPUT(ENBGSMPL,8.) = 10 THEN XENR_PCM = 5; /* Not Enrolled (65+) */
  IF INPUT(ENBGSMPL,8.) = 9 THEN XENR_PCM = 6; /* Enrolled (65+)-mil PCM */
  IF INPUT(ENBGSMPL,8.) = 8 THEN XENR_PCM = 7; /* Enrolled (65+)-civ PCM */
END;
```

c. **Most–Used Health Plan (XINS_COV)**

The respondent's most–used health plan is derived from variable H19003 (unless the respondent is active duty, in which case they are automatically enrolled in Prime) and the respondent's age, with categories as follows:

1 = Active duty, under 65  
2 = Other TRICARE Prime enrollees, under 65  
3 = TRICARE Select (Civilian Health and Medical Program of the Uniformed Services: CHAMPUS, formerly known as TRICARE Standard/Extra)  
4 = Medicare Part A and/or Part B  
5 = Other civilian health insurance or civilian HMO  
6 = Prime, 65 or over  
7 = TRICARE Plus and Medicare  
8 = Veterans Administration (VA)  
9 = TRICARE Reserve Select  
10 = TRICARE Retired Reserve  
12 = Continued Health Care Benefit Program (CHCBP)  
13 = TRICARE Young Adult Prime  
14 = TRICARE Young Adult Select  
. = Unknown

```/* XINS_COV--INSURANCE COVERAGE */

### Enrollment Distinguishing Reservists From Active Duty (XENR_RSV)

This variable is similar to XENR_PCM but separates reservists from other active duty.

XINS_RSV has 8 possible values:

1 = Active duty (<65) Non reservists  
2 = Enrolled (<65) - mil PCM  
3 = Enrolled (<65) - civ PCM  
4 = Not Enrolled (<65)  
5 = Not Enrolled (65+)  
6 = Enrolled (65+)-mil PCM  
7 = Enrolled (65+)-civ PCM  
8 = Active duty (<65) Reservists  
. = Unknown

/* XENR_RSV--ENROLLMENT DISTINGUISHING RESERVISTS FROM ACTIVE DUTY */
IF 17 <= INPUT(FIELDAGE,8.) < 65 THEN DO;
   IF INPUT(ENBGSMPL,8.) = 1 THEN DO;

   IF INPUT(ENBGSMPL,8.) = 9 THEN XENR_RSV = 6;                /* Enrolled (65+)-mil PCM */
   IF INPUT(ENBGSMPL,8.) = 8 THEN XENR_RSV = 7;                /* Enrolled (65+)-civ PCM */
   END;

### Beneficiary Category (XBENCAT)

This variable was created because of the increasing presence of inactive reservists and their dependents in the data. XBENCAT has eight possible values:

1 = Active Duty  
2 = Dependent of Active Duty  
3 = Active Reservist  
4 = Dependent of Active Reservist  
5 = Inactive Reservist  
6 = Dependent of Inactive Reservist  
7 = Retired or dependent<65  
8 = Retired or dependent>65  
. = Missing/Other

/* TRICARE Reserve Select and the increasing presence of inactive reservists and their dependents in our data.  
In order to accommodate them, we will need to create additional variables. */

ELSE IF DBENCAT='DGR' THEN XBENCAT=4; *Dependent of Reservist;
ELSE IF DBENCAT='IGR' THEN XBENCAT=5; *Inactive Reservist;
ELSE IF DBENCAT='IDG' THEN XBENCAT=6; *Dependent of Inactive Guard);
ELSE IF DBENCAT IN ('RET','DR','DS') THEN DO;
   IF 17 <= INPUT(FIELDAGE,8.) < 65 THEN XBENCAT=7;   *Retired or Dependent of Retiree <65;
   ELSE IF INPUT(FIELDAGE,8.)  >= 65 THEN XBENCAT=8; *Retired or Dependent of Retiree >=65;
END;

3. Preventive Care

Preventive care analyses compare the percentage of respondents who received services within the recommended time period to the TRICARE standard/federal Healthy People 2020 goal. We constructed new binary variables from the responses to indicate whether the respondent received the preventive care service within the recommended time period. See Table 2.5 for the list of the variables developed for analysis of preventive care. With the exception of XBMICAT, the new preventive care variables have the following values:

1 = Received service within the recommended time period
2 = Did not receive service within the recommended time period

   E. WEIGHTING PROCEDURES

   Quarterly and annual tabulations and analyses of the 2019 HCSDB must account for the survey's
   complex sample design and adjust for possible bias due to nonresponse. As part of sample selection,
   Mathematica constructed sampling weights (BWT) that reflect the differential selection probabilities
   used when sampling beneficiaries across strata. With the level of nonresponse present in the
   HCSDB and the likelihood that respondents and nonrespondents will differ in terms of their
   responses to survey questions, the issue of nonresponse bias is potentially a serious one. Prior to
   2005, we compensated for potential nonresponse bias by adjusting for nonresponse independently
   within weighting classes, defined by the stratification variables — enrollment status, beneficiary
   group, and geographic area. In other words, it was assumed that both response likelihood and
   characteristics related to survey outcome variables were homogeneous within these weighting
   classes.

   However, because the HCSDB sample is selected from the DEERS, a great deal is known about
   both respondents and nonrespondents. Consequently, a large number of variables are available for
   the nonresponse weighting adjustments. As described above, in surveys prior to 2005, the only
   auxiliary variables used in developing the nonresponse weighting adjustments were the stratification
   variables, which represented a small subset of the available variables. Beginning with the 2005
HCSD, we developed a new weighting adjustment procedure to incorporate more information about respondents and nonrespondents. The first stage in this process identified variables from the frame that were most related to whether or not a beneficiary responded to the survey. After initial screening of variables, the Chi-squared Automatic Interaction Detection (CHAID) (Biggs et al. 1991) technique was used for this purpose. Secondly, we incorporated the chosen auxiliary variables into a weighting class adjustment procedure using a response propensity model.

1. Constructing the Sampling Weight

In the 2019 HCSDB, stratified sampling was used to select the sample of beneficiaries that would receive the questionnaire. Sampling was independently executed within strata defined by combinations of three domains: enrollment status groups; beneficiary groups; and geographic areas. The sample was selected with differential probability of selection across strata. Sample sizes were driven by predetermined precision requirements. For further details of the 2019 adult sample design, see Mathematica’s “Health Care Survey of DoD Beneficiaries: 2019 Adult Sampling Report (2019).”

Our first step in constructing sampling weights was to ensure that they reflected the unequal sampling rates across strata. These sampling weights can be viewed as the number of population elements each sampled beneficiary represents. The sampling weight was defined as the inverse of the beneficiary’s selection probability:

\[ W_i(h,i) = \frac{N_h}{n_h} \]

where:

- \( W_i(h,i) \) is the sampling weight for the \( i^{th} \) sampled beneficiary in stratum \( h \),
- \( N_h \) is the total number of beneficiaries in stratum \( h \), and
- \( n_h \) is the number of sampled beneficiaries in stratum \( h \).

The sum of the sampling weights over selected beneficiaries \( i \), from stratum \( h \) equals the total population size of stratum \( h \) or \( N_h \).

2. Adjustment for Total Nonresponse

Survey estimates obtained from respondents only can be biased with respect to describing characteristics of the total population (Lessler and Kalsbeek 1992). The choice of an appropriate method for adjusting for potential nonresponse bias depends on the response mechanism that underlies the study population. We adjusted for nonresponse independently within weighting classes, with the assumption that both response and characteristics directly or indirectly related to survey variables are homogeneous within these classes. Two types of nonresponse were associated with the 2019 HCSDB:

- Unit or total nonresponse occurred when a sampled beneficiary did not respond to the survey questionnaire (e.g., refusals, no questionnaire returned, blank questionnaire returned, bad address).
- Item nonresponse occurred when a question that should have been answered was not answered (e.g., refusal to answer, no response).

Because item response rates in previous surveys were high, statistical imputation, a technique used to compensate for item nonresponse, was not used in the 2019 HCSDB. To account for unit or total
nonresponse, we implemented a weighting class adjustment procedure where the weighting classes are formed from a response propensity model (see Section 4 below).

3. Weighting Class Adjustments for Non-Response

The 2019 HCSDB weighting was implemented by using a method instituted in 2005. This method partitions the sample into groups, called weighting classes, using the propensity scores from the propensity model. Weights of respondents are then adjusted within each class so that they sum to the weight total for nonrespondents and respondents from that class. Implicit in the weighting class adjustment is the assumption that, had the nonrespondents responded, their responses would have been distributed in the same way as the responses of the other respondents in their weighting class.

Nonresponse adjustment factors for the 2019 HCSDB were calculated in two steps. First, we adjusted the sampling weights to account for sampled beneficiaries for whom eligibility status could not be determined. Sampled beneficiaries were then grouped as follows according to their response status $d$:

- $d = 1$: Eligible — complete questionnaire returned (FNSTATUS = 11)
- $d = 2$: Eligible — incomplete or no questionnaire returned (FNSTATUS = 12 or 20)
- $d = 3$: Ineligible — deceased, incarcerated or permanently incapacitated beneficiary (FNSTATUS = 31)
- $d = 4$: Eligibility unknown — no questionnaire or eligibility data (FNSTATUS = 41 or 42)
- $d = 5$: Ineligible — ineligible at time of Altarum address update (FNSTATUS = 32)

Within weighting class $c$, the weights of the $d = 4$ nonrespondents with unknown eligibility were redistributed to the cases for which eligibility was known ($d = 1, 2, 3$), using an adjustment factor $A_{wct}(c,d)$ that was defined to be zero for $d = 4$, one for $d = 5$, and defined as:

$$A_{wct}(c,d) = \frac{\sum_{i \in S(c)} W_s(c,i)}{\sum_{i \in S(c)} I_1(i)W_s(c,i) + \sum_{i \in S(c)} I_3(i)W_s(c,i) + \sum_{i \in S(c)} I_3(i)W_s(c,i) + \sum_{i \in S(c)} I_4(i)W_s(c,i)}$$

for $d = 1, 2, 3$

where:

- $A_{wct}(c,d)$ is the eligibility-status adjustment factor for weighting class $c$ and response status code $d$,
- $I_d(i)$ is the indicator function that has a value of 1 if sampled unit $i$ has a response status code of $d$ and value of 0 otherwise,
- $S(c)$ is the set of sample members belonging to weighting class $c$, and
- $W_s(c,i)$ is the sampling weight (BWT) for the $i$th sample beneficiary from weighting class $c$ before adjustment.

1 Because we determine all cases in the sample that are $d = 5$, none of the weights of the $d = 4$ nonrespondents are redistributed to $d = 5$. 

09/24/19 36
The adjustment $A_{wc1}(c,d)$ was then applied to the sampling weights to obtain the eligibility-status adjusted weight. Beneficiaries in weighting class $c$ with response status code of $d$ were assigned the eligibility-status adjusted weight:

$$W_{wc1}(c,d,i) = A_{wc1}(c,d) W_s(c,i)$$ for $d = 1, 2, 3, 4, 5$

The next step in weighting was to adjust for incomplete or missing questionnaires from beneficiaries known to be eligible. For this adjustment, the weighting class method is again used. Within weighting class $c$ the sample was again partitioned into groups according to the beneficiary's response status code $d$. Within weighting class $c$, the weights of the $d = 2$ nonresponding eligibles were redistributed to the responding eligibles $d = 1$, using an adjustment factor $A_{wc2}(c,d)$ that was defined to be zero for $d = 2, 4$. For Group 1 ($d = 1$), the questionnaire-completion adjustment or $A_{wc2} (c, 1)$ factor for class $c$ was computed as:

$$A_{wc2}(c,1) = \frac{\sum_{i \in S(c)} I_1(i)W_{wc1}(c,i)}{\sum_{i \in S(c)} W_{wc1}(c,i)}$$

By definition, all $d = 3$ and $d = 5$ ineligible beneficiaries “respond,” so the $d = 3$ and $d = 5$ adjustment factor (based on response propensity) is 1, or $A_{wc2}(c,3) = A_{wc2}(c,5) = 1$. The questionnaire-completion adjusted weight was calculated as the product of the questionnaire-completion adjustment $A_{wc2}(c,d)$ and the previous eligibility-status adjusted weight $W_{wc1}(c,d,i)$, or:

$$W_{wc2}(c,d,i) = A_{wc2}(c,d)W_{wc1}(c,d,i)$$

As a result of this step, all nonrespondents ($d = 2, 4$) had questionnaire-completion adjusted weights of zero, while the weight for ineligible cases ($d = 3, 5$) remained unchanged, or $W_{wc2}(c,3,i) = W_{wc1}(c,3,i)$ and $W_{wc2}(c,5,i) = W_{wc1}(c,5,i)$.

4. Response Propensity Model for Non-Response

It is common practice to use weighting adjustments to compensate for unit nonresponse in sample surveys. There are numerous methods developed to make these adjustments (Kalton and Maligalig 1991; Holt and Smith 1979; Oh and Scheuren 1983; Little and Vartivarian 2003; Vartivarian and Little 2003). Moreover, a number of studies have evaluated multiple weighting methods to adjust for nonresponse. Carlson and Williams (2001) found nearly identical results with respect to the design effects and the weighted estimates for two weighting approaches: 1) weighting classes using the design features (strata and sampling units), and 2) propensity models containing numerous variables identified as predictors of response. They conjectured that the propensity model approach might perform better for estimates in key geographic subdomains because there would be many fewer weighting cells than for the national estimates. Rizzo et al. (1994) investigated several alternative methods for panel nonresponse in the Survey of Income and Program Participation (SIPP), including nonresponse adjustment cells, logistic regression, CHAID methods, and generalized raking methods. They found a number of variables related to panel nonresponse that are not employed in the standard SIPP nonresponse adjustment cells methodology. These variables were used in the alternative weighting methods and were found to result in similar weights regardless of method. Therefore, Rizzo et al. conclude that the choice of model variables is more important than the weighting methodology.
a. Predictors of Response Propensity

The first step in developing nonresponse adjustments is deciding which of the large number of variables available from the HCSDB sample frame would be best to use in the adjustment procedures. We do this by evaluating each variable and its relationship to response. Segmentation analysis using the CHAID software was used to allow for a model-building process that focuses on segments showing different response propensities.\(^2\) This analysis avoids the problem of examining “all possible interactions” that is typical of regression modeling. The unweighted segmentation algorithm split the sample into subgroups based on response rates. The splitting process continued until either no other predictors were found or the segment size fell below a minimum size of 50. For ease of interpretation, we also limited the splitting process to three levels. We ran the CHAID analysis twice, once to predict eligibility determination and again to predict survey completion among eligible beneficiaries.

b. Response Propensity Weighting Classes

The nonresponse adjustments involved developing weighting classes using sample design characteristics and the response propensity model developed in the modeling stage. The usual HCSDB approach computes the response weight adjustment cells based on fully observed variables from the sample frame. However, in order to avoid empty or sparsely populated cells, we limited our classification to the stratification variables, catchment area, enrollment, and beneficiary group, and collapsed these cells as necessary.

The alternative approach we used to reduce the number of cells was to stratify based on response propensity. The method used a model of the relationship between a set of beneficiary characteristics and a response outcome. We used logistic regression to model this relationship because the response outcome is dichotomous: beneficiaries either respond or they do not. If the characteristics in the model predict response well and if the characteristics are correlated with the substantive variables of the survey, then the model-based adjustment factors applied to the sampling weights greatly reduce the potential for nonresponse bias. Like the previous weighting class adjustment method, we make two separate weighting adjustments to attempt to compensate for nonresponse: an eligibility determination adjustment and a completion adjustment.

The overall probability of having a known eligibility status is estimated with a logistic regression model. The probability that sample beneficiary \(i\) has a known eligibility status is:

\[
\hat{\lambda}_i = P\left[ E_i = 1 \mid X_i \hat{\beta} \right] \\
= \left[ 1 + \exp \left( -X_i \hat{\beta} \right) \right]^{-1}
\]

where

\[
E_i = \begin{cases} 
1 & \text{if sample beneficiary } i \text{ has eligibility status determined} \\
0 & \text{otherwise}
\end{cases}
\]

\(^2\) Using as a criterion the significance of a chi-squared test, CHAID evaluates all of the values of a potential predictor variable. It merges values that are judged to be statistically homogeneous (similar) with respect to response and maintains all other values that are heterogeneous (dissimilar). It then selects the best predictor variable to form the first branch in the decision tree, such that each node is made of a group of homogeneous values of response. This process continues recursively until the tree is fully grown.
and $X_i$ is a vector of HCSDB response predictors (main effects and interaction terms) and $\hat{\beta}$ are the estimated regression coefficients.

To determine the best set of response predictors, we fit models using forward and backward stepwise selection logistic regression procedures with normalized weights in SAS. We developed automated models separately for Continental U.S. (CONUS) and Outside of Continental U.S. (OCONUS) and included as response predictors an indicator variable for each TNEX region. Besides TNEX region, an indicator of whether a beneficiary is in a catchment area or not was added to the model. In the full model, we included as response predictors all nine variables (TNEX region, age, beneficiary group, PCM, personnel category (enlisted, warranted officer, or officer), military rank, sex, branch of service, and an indicator for being in a catchment area) and interactions identified by the CHAID analysis. We re-ran the two sets of resulting unweighted models using weights and the sample design characteristics in SUDAAN. We estimated the coefficients using a weighted logistic regression procedure in SUDAAN, which incorporates the stratified design in estimating standard errors for the coefficients. We selected the model with the best Hosmer and Lemeshow (H-L) goodness-of-fit test from both SAS and SUDAAN since all models have similar concordance-discordance rates.

For each eligibility determination model, we ordered the list of response propensity scores and then divided them into groups. For CONUS five weighting classes were formed for Q1 and Q3 based on the quintiles of the propensity scores and four weighting classes were formed for Q2 based on quartiles. For OCONUS, we formed four classes for Q1 and Q3 using the quintiles of the propensity scores and three classes for Q2 using 50th and 75th percentiles of the propensity scores.

For the completion adjustment stage, we formed the weighting classes using the results from the CHAID trees; the number of weighting classes was determined by the number of the terminal nodes in the CHAID trees. Because we observed little variation in the questionnaire-completion adjustment stage, statistical modeling was unnecessary, and instead the weighting classes were formed directly from the CHAID trees.

In addition, we poststratified the nonresponse-adjusted weights to the frame totals to obtain specific domain weighted totals equal to population totals. The poststrata were defined by stratification variables — TNEX region, catchment area, and enrollment status, and were collapsed to form poststrata of sufficient size. Due to the possibly insufficient sample size constraint within each TNEX region, we stratified by catchment area only for those enrolled with military primary care manager. The poststratification adjustment factor for the $h$th poststratum is defined as:

$$A^\text{PS}_h = \sum_{i \in h} W^C_i$$

where $W^C_i$ is the nonresponse-adjusted weights, and $N_h$ is the total number of beneficiaries in the DEERS frame associated with the $h$th poststratum for the $h$th beneficiary. We calculated the poststratified adjusted weight for the $i$th beneficiary sampled from the $h$th poststratum by the following:

$$W^\text{PS}_{hi} = A^\text{PS}_h \times W^C_i$$

Therefore, when summed over all respondents in poststratum $h$, the poststratified weights total $N_h$.

Lastly, we evaluated the weights and trimmed extreme weights to reduce excessive effect of extreme weights to variance inflation. Whenever some weights were trimmed, we redid the post-stratification of the weights to produce the final survey weights.
5. **Calculation of Combined Annual Weights**

As a final step, we combined the three consecutive quarterly data files. Because there were a total of 141 late respondents who were not included in the Quarters I–II, 2019 files, the first two quarters were re-weighted before they were merged into the combined annual dataset. The new Quarters I–II datasets contain the responses of respondents who “trickled” in past the deadline for the survey. After reweighting the Quarters I–II datasets, the Quarters I–II datasets and the Quarter III dataset were merged to form a combined annual dataset with data for all three quarters.

Since the combined annual dataset sample sizes are sufficiently large to provide statistically reliable estimates, users will be able to calculate survey estimates for subdomains, such as catchment areas (XCATCH). Construction of an appropriate annual weight will allow users to treat the combined data as coming from a single survey. Quarterly weights are still included so that users may continue to calculate quarterly estimates and retain the ability to combine any sequential three quarters into a combined data set.

Combined estimates can be calculated from the three independent samples by averaging the estimates for the three quarters. This method for combining the three quarters of data and calculating combined estimates assumes that the variance in estimates from one quarter to the next is merely due to sampling variation. These combined estimates will, in fact, be more precise than the quarterly estimates because they average out the variation across quarters (for a further discussion, see Friedman, et al. 2002).

We calculated the final survey weight for each quarter (Q1, Q2, and Q3) within the combined dataset. To retain the sum of the weights from the combined data as the population count, we average the population over the three quarters, by rescaling each quarterly survey weight (denoted as WQ1, WQ2, and WQ3) as follows in order to develop a combined annual weight:

\[
WCOM = q_1 \times WQ1 + q_2 \times WQ2 + q_3 \times WQ3
\]

where \(q_i\) is between 0 and 1 with the constraint \(q_1 + q_2 + q_3 = 1\). The choice of the appropriate value for each of the \(q_i\)'s can be based on various assumptions. We decided that each quarterly contribution to the annual weight should be equal, and therefore assigned the value of each \(q_i\) as follows:

\[
q_1 = 0.33; \quad q_2 = 0.33; \quad q_3 = 0.33
\]

Then, the weight for the combined annual data in (1) will be \(WCOM\).

The final data file retains the quarterly sampling stratum variables and quarterly weight as calculated using the response propensity (FWRWT) and the combined weights (CFWT). The file also contains an indicator variable for the quarters. From this combined dataset, one can calculate both combined data and revised quarterly estimates.

6. **Calculation of Quarterly Jackknife Replicate Weights**

Calculation of variance estimates in the HCSDB requires a design-based variance estimation technique that is available in most statistical software packages for analysis from a complex survey data, such as WesVarPC® (Brick et al. 1996), SUDAAN®, SAS/STAT® version 8 or higher, and STATA®. The Taylor series linearization technique requires sample design information, including the sampling weight and stratification information. As an alternative, a replication technique such as the Jackknife method can be used to calculate variance estimates. In the HCSDB, a series of jackknife replicate weights are calculated and attached to each beneficiary record in the database. In jackknife replication, deleting selected cases from the full sample generates the prescribed number of replicates.
To construct the HCSDB replicate weights, the entire file of sampled beneficiaries is first sorted by sampling strata. Next, 60 mutually exclusive and exhaustive systematic subsamples of the full sample are identified in the sorted file. A jackknife replicate is then obtained by dropping one subsample from the full sample. As each subsample is dropped in turn, 60 sets of jackknife replicates are produced. The weighting process after the modeling is applied to the full sample is then applied separately to each of the jackknife replicates to produce a set of replicate weights for each record. We did not model the propensity scores for each replicate. Instead the weighting cells from the propensity scores from the full sample weight were adopted in the replicate weights construction. Then, a series of jackknife replicate weights (FWRWT1-FWRWT60) was attached to the final data in order to construct jackknife replication variance estimates. These replicate weights should be used to estimate variances of quarterly estimates.

7. Calculation of Annual Jackknife Replicates

Since 60 quarterly replicate weights were available in each quarter, a total of 180 annual replicate weights (CFWT1 – CFWT180) were constructed across the three quarters.

Figure 1: Construction of Annual replicate weights based on the quarterly replicate weights

![Diagram of Annual replicate weights]

Each quarterly replicate weight was put into the data set as a form of block diagonal (1, 2, 3), and the quarterly final weights were put into the dataset for off-diagonal (4, 5, 6). This construction was based on the assumption that each quarterly sample was independent. The use of the quarterly final weights as the replicate weights for off-diagonal units in the dataset does not introduce variability into the variance. In fact, the replicate estimates from the off-diagonal are equal to the full sample estimate, because the replicate weights on the off-diagonal are the same as the quarterly final weight. Thus, the values of variance factor \( \left( \hat{\theta}_r - \hat{\theta} \right)^2 \), i.e., the differences between the estimates calculated from the replicate \( r \) and those calculated on the basis of full sample, are zero for replicates with off-diagonal units only.

The general formula for the jackknife variance estimator in SUDAAN (RTI 2002) can be expressed as:
\[ v_{\text{jack}}(\hat{\theta}) = \sum_h \frac{N_h - D_h}{D_h R_h} \sum_i (\hat{\theta}_{hi} - \hat{\theta})^2 \]

where
- \( N_h \) is the number of PSUs or clusters within the stratum \( h \),
- \( D_h \) is the number of PSUs or clusters deleted in creating the replicate,
- \( R_h \) is the number of replicates selected,
- \( \hat{\theta}_{hi} \) is the estimate of the parameter \( \theta \) from the \( i \)-th replicate of the \( h \)-th stratum,
- \( \hat{\theta} \) is the estimate based on the entire sample.
Analysis

This chapter explains how the HCSDB variables were processed during the analysis phase of the project. It covers the procedures for calculating response rates, developing dependent and independent variables for the analysis, and estimating the variance of the statistics. The “Health Care Survey of DoD Beneficiaries: Annual Report” is described briefly along with an outline of the steps involved in creating charts for the reports.

A. RESPONSE RATES

In this section, we present the procedures for response rate calculations along with a brief analysis of response rates for domains of interest. Response rate calculations for the 2019 HCSDB were consistent with methods used since 2006. The procedure is based on the guidelines established by the Council of American Survey Research Organizations (CASRO 1982) for defining a response rate.

1. Definition of Response Rates

In calculating response rates and related measures, we considered two different rates: unweighted and weighted. The unweighted version of the response rate represents the counted proportion of respondents among all sampled units, and the weighted version indicates the estimated proportion of respondents among all population units. When sampling rates across all strata are equal, these two approaches yield the same result. However, for the 2019 HCSDB, we used different sampling rates across strata, and thus it is useful to report both “unweighted” and “weighted” response rates.

As presented in Chapter 2, all sampled beneficiaries were completely classified into the following four main (seven detailed) groups:

- Group 1 (G1-1): eligible and complete questionnaire returned;
- Group 1 (G1-2): eligible and incomplete questionnaire returned;
- Group 2: eligible and questionnaire not returned;
- Group 3 (G3-1): returned ineligible;
- Group 3 (G3-2): ineligible at time of Altarum address update;
- Group 4 (G4-1): eligibility unknown and locatable; and
- Group 4 (G4-2): eligibility unknown and unlocatable.

The unweighted counts reflect the number of sampled cases \( n_i \) for Group \( i \), where \( i = 1,2,3,4 \), and the weighted counts reflect the estimated population size \( \hat{N}_i \) for Group \( i \), where \( i = 1,2,3,4 \) for the four main response categories.

These weighted and unweighted counts were also calculated for the subgroups G1-1, G1-2, G3-1, G4-1, and G4-2, where we denote the unweighted counts by \( n_{1,1}, n_{1,2}, n_{3,1}, n_{4,1}, \) and \( n_{4,2} \), and the

---

3 The weighted sum of sampled units can be regarded as an estimated population size. The base weight (BWT) was used in calculating weighted counts, where BWT is the inverse of selection probability.
Response rates can be partitioned into two measures: the location rate and the completion rate. To calculate the location rate, we first estimated the number of Group 4 "located" beneficiaries who were expected to be eligible for the survey:

\[
l = \left( \frac{n_1 + n_2}{n_1 + n_2 + n_{3,1}} \right) n_{4,1}\]

and

\[
l_w = \left( \frac{\hat{N}_1 + \hat{N}_2}{\hat{N}_1 + \hat{N}_2 + \hat{N}_{3,1}} \right) \hat{N}_{4,1}\]

where \( l \) and \( l_w \) are unweighted and weighted estimates of the number of "located" beneficiaries among Group 4. Then, the unweighted and weighted "location rates" are defined by:

\[
LR = \frac{n_1 + n_2 + l}{n_1 + n_2 + n_{4} \left( \frac{n_1 + n_2}{n_1 + n_2 + n_{3,1}} \right)} \quad \text{and} \quad LR_w = \frac{\hat{N}_1 + \hat{N}_2 + l_w}{\hat{N}_1 + \hat{N}_2 + \hat{N}_4 \left( \frac{\hat{N}_1 + \hat{N}_2}{\hat{N}_1 + \hat{N}_2 + \hat{N}_{3,1}} \right)}.
\]

And the corresponding unweighted and weighted "completion rates" are defined by:

\[
CR = \frac{n_{1,1}}{n_1 + n_2 + l} \quad \text{and} \quad CR_w = \frac{\hat{N}_{1,1}}{\hat{N}_1 + \hat{N}_2 + l_w}.
\]

The final response rates in Equation (4) can be obtained by multiplying the location rate in Equation (2) by the completion rate in Equation (3).

\[
FRR = LR \times CR \quad \text{and} \quad FRR_w = LR_w \times CR_w.
\]

In the definitions in Equations (1) through (4), the subscript "w" indicates that all calculations involve weighted counts. The method used to calculate response rates is consistent with the CASRO guidelines.

2. Reporting

We examined response rates to identify patterns across different domains or characteristics. Whereas analysts prefer weighted rates that reflect the estimated proportion of respondents among all population beneficiaries, operational staff are often interested in receiving unweighted measures. Accordingly, all tables include both unweighted and weighted values. In the following pages, we focus on discussing unweighted response rates for domains of interest.
Table 3.1 includes overall response rates for the 2019 HCSDB for Quarters I-III individually and combined. It also contains response rates by beneficiary groups, and by enrollment status:

- Overall: The overall unweighted response rate for the combined 2019 Adult HCSDB was 8.9 percent (which is found in Table 3.1 in the “Overall” row and COMBINED column). This rate is lower than the 12.5 percent response rate achieved in the combined 2018 Adult HCSDB.
- Beneficiary group and enrollment status: All response rates calculated by beneficiary group and enrollment status show similar patterns to the 2018 survey, with family members of active duty beneficiaries having the lowest response rates and beneficiaries 65 years and older having the highest rates.4
- The response rates for the first two quarters include late respondents (respondents whose survey "trickled-in" after the deadline).

Appendix D (Response Rate Tables) contains tables showing unweighted and weighted response rates for all three quarters and the combined annual dataset. A summary of results based on unweighted response rates for selected domains follows:

- Regions: Combined response rates across regions range from 8.8 percent in the West to 9.0 percent in the East and Overseas (Table D.9).
- Sex: Combined response rate for women is 6.9 percent as compared to 11.9 percent for men (Table D.3).

---

4 However, response patterns vary considerably across beneficiary and enrollment groups. The relatively low level of response for active duty persons and their family members could be due to frequent relocations and our inability to receive new addresses in a timely manner.
B. VARIANCE ESTIMATION

Due to the complex sample design, variance estimation for the 2019 HCSDB was not simple, and could most easily be achieved using one of two methods. The first – the Taylor series linearization via SUDAAN (Shah et al. 1996) or SAS/STAT version 8 or higher – is a direct variance estimation method that can be used to calculate the standard errors (the square root of the variance) of estimates. This method was used for the 2019 HCSDB analyses. For analysts who prefer a replication method of variance estimation, replicate weights for jackknife replication are provided in the public use file. This section details the two approaches to calculating variance estimates of the characteristics of interest associated with the 2019 HCSDB.

1. Taylor Series Linearization

Mathematica uses Taylor series linearization to produce standard errors for the estimates from the 2019 HCSDB. For most sample designs, including the 2019 HCSDB, design-based variance estimates for linear estimators of totals and means can be obtained via explicit formulas. However, estimators for nonlinear parameters, such as ratios, do not have exact expressions for the variance. The Taylor series linearization method can be used to approximate the variance of a nonlinear estimator with the variances of the linear terms from the Taylor series expansion for the estimator (Woodruff 1971). To calculate variance estimates based on the Taylor series linearization method given HCSDB’s stratified sampling design, we needed to identify stratum as well as the final analysis weight for each data record. We have included these variables in the final database. For variance estimation, we used the general-purpose statistical software package SUDAAN to produce Taylor series variance estimates. SUDAAN is the most widely used of the publicly available software packages for the Taylor series linearization method. In SUDAAN, the user specifies the sample design and includes the stratum variables and the analysis weight for each record. Unlike WesVarPC, SUDAAN allows for unlimited strata, so stratification effects can be incorporated when calculating standard errors.

2. Jackknife Replication

Resampling methods are often used in estimating the variance for surveys with complex designs. In resampling, the sample is treated as if it were a population, and many smaller subsamples are drawn from the original sample (Lohr 1999, pages 298-308). These subsamples are then used to compute the variance. Replication methods have been recommended for surveys in which the sample design is complex, nonresponse adjustments are needed, and statistics of interest are complicated. In such surveys, the usual design-based estimation formula is extremely difficult or impossible to develop.
Jackknife replicate weights can be used to calculate the standard errors of estimates. An estimate of a characteristic of interest is calculated (with the same formula as the full sample estimate) using each set of replicate weights; these replicate estimates are used to derive the variance of the full sample statistic.

The jackknife variance of the full sample statistic of interest is estimated from the variability among the replicated estimates. When the replicate weights are produced according to the aforementioned procedure, jackknife replicate standard errors can be produced using custom publicly available statistical software. For instance, WesVarPC® (Brick et al. 1996) is a popular software package that calculates standard errors based on replication methods. It produces standard errors for functions of survey estimates, such as differences and ratios, as well as simple estimates such as means, proportions, and totals. Additional details about the jackknife replication approach can be found in Wolter (1985). Like other replication methods, the jackknife variance estimation can be easily implemented for any form of estimate without further algebraic manipulation.

C. SIGNIFICANCE TESTS

In certain charts in the Beneficiary Reports and the “Health Care Survey of DoD Beneficiaries: Annual Report”, statistical testing is performed to show which columns of the chart (values of the independent variable) are statistically different from the CAHPS benchmark. Footnotes and differently colored, bolded, or italicized fonts indicate if a region performed significantly better than the CAHPS benchmark (bold green font) or significantly worse than the CAHPS benchmark (italicized red font); no change in font indicates no statistically significant difference.

The null hypothesis for this significance test is that the mean for the column is essentially equal to the CONUS mean, and the alternative hypothesis is that the mean for the column is different from the CONUS mean. That is, we are testing:

$$H_0: \mu_1 = \mu_2 \quad \text{vs.} \quad H_a: \mu_1 \neq \mu_2$$

For instance, $\mu_1$ might represent the characteristic of interest for the active duty group while $\mu_2$ might represent the same characteristic for all CONUS regions. Another way to formulate that $\mu_1 = \mu_2$ is that $\mu_1 - \mu_2 = 0$.

With large sample sizes, the estimator $\bar{y}_1 - \bar{y}_2$ approximately follows a normal distribution with mean zero and variance $\sigma_{y_1-y_2}^2$ under the null hypothesis. In testing the hypothesis, a test statistic $T$ is thus calculated as:

$$T = \frac{\bar{y}_1 - \bar{y}_2}{\hat{\sigma}_{y_1-y_2}}.$$

With a type I error rate of $\alpha = 0.05$, the null hypothesis should be rejected if $|T| > 1.96$. The denominator of $T$ (i.e., the standard error of $\bar{y}_1 - \bar{y}_2$) can be calculated as the square root of the variance estimator $\hat{\sigma}_{y_1-y_2}^2$, where:

$$\hat{\sigma}_{y_1-y_2}^2 = \text{var}(\bar{y}_1) + \text{var}(\bar{y}_2) - 2 \text{cov}(\bar{y}_1, \bar{y}_2).$$

If $\bar{y}_1$ and $\bar{y}_2$ are independent, then the covariance term equals zero and thus the variance estimator can be easily obtained as the sum of two individual variance estimators. However, there are some cases in which the condition of independence does not hold. For example, the active duty MTF group is not independent of the CONUS region because these two domains share active duty
group within the CONUS regions. In this case, the covariance term should be incorporated into the variance formula. With suitable algebra and program modification, these covariance terms were calculated for all such cases. All detailed programs are included in Appendix G.

D. DEMOGRAPHIC ADJUSTMENTS

All scores in the TRICARE Beneficiary Reports are adjusted for patient characteristics affecting their scores. Scores can be adjusted for a wide range of socioeconomic and demographic variables.

The purpose of risk adjustment is to make comparisons of outcomes, either internally or to external benchmarks, after controlling for characteristics beyond the health care provider’s control. Based on previous work with satisfaction scales derived from the CAHPS Health Plan Survey, we have observed that satisfaction increases with age and decreases with poor health across social classes and insurance types. The methodology is an adaptation of that found in CAHPS 2.0 Survey and Reporting Kit (DHHS, 1999). In addition to controlling for these factors, the methodology used for the 2019 HCSDB achieves the following:

- Permits risk-adjusted comparisons among regions and catchment areas within and across beneficiary and enrollment groups
- Permits testing the hypothesis that the difference in risk-adjusted scores between a region or catchment area and a benchmark is due to chance
- Is appropriate for CAHPS composites and global satisfaction ratings.

The model used for demographic adjustment is:

$$Y_{ijkl} = \beta_{ijkl} + \beta_{ijkl}A + \beta_{ijkl}P + \varepsilon_{ijkl},$$

where $Y_{ijkl}$ is a dependent variable, $\beta_{ijkl}$'s are parameters to be estimated, $A$'s are age dummy variables ($A_{ijkl} = 1$ if the beneficiary is in age group $q$, and 0 otherwise; $A_1 = \text{age 18-24}, A_2 = \text{age 25-34}, A_3 = \text{age 35-44}, A_4 = \text{age 45-54}, A_5 = \text{age 55-64}$), $P$ is health status. The subscripts $i, j, k$ and $l$ refer to the service/region, MTF, beneficiary, and beneficiary’s enrollment group, respectively.

Given 24 region and service combinations and $J+1$ catchment areas, the specifications that we used for the error term were:

$$\varepsilon_{ijkl} = \delta_{ijkl} + \gamma_{ijkl}R + \gamma_{ijkl}R + \gamma_{ijkl}R + \gamma_{ijkl}R + w_{ijkl}, \quad (1)$$

where $R$'s are service/region dummy variables ($R_{ijkl} = 1$ if the beneficiary is in service/region $i$ and beneficiary group $l$, and 0 otherwise) when catchment areas were not reported, and and

$$\varepsilon_{ijkl} = \gamma_{ijkl}H + \gamma_{ijkl}H + \gamma_{ijkl}H + \gamma_{ijkl}H + w_{ijkl}, \quad (2)$$

where $H$'s are catchment area dummy variables ($H_{ijkl} = 1$ if the beneficiary is in catchment area $j$ and beneficiary group $l$, and 0 otherwise) when catchment areas were reported.

The methods for calculating demographically adjusted values and testing hypotheses of differences in demographically adjusted scores among geographic areas vary with the way $\varepsilon_{ijkl}$ is defined. For specification (1), the adjusted mean of the dependent variable $Y$ for region $i$ can be obtained as:

$$\bar{y}_i = \hat{\delta}_0 + \hat{\delta} + \hat{\beta}_1A_1 + \hat{\beta}_2A_2 + \ldots + \hat{\beta}_5A_5 + \hat{\beta}_6P,$$
where \( \hat{\beta}_i \)'s are estimated model parameters, \( \hat{A}_i \)'s are weighted proportions of age group \( i \) among the total U.S. population, and \( \hat{\bar{P}} \) is the weighted MHS mean of the variable \( P \). For beneficiary group \( l \), the adjusted regional value is:

\[
\bar{y}_{il} = \hat{\delta}_{il} + \hat{\beta}_i \hat{A} + \hat{\beta}_{2i} \hat{A}_{2i} + \ldots + \hat{\beta}_{5i} \hat{A}_{5i} + \hat{\beta}_6 \hat{\bar{P}},
\]

where \( \hat{A}_q \)'s are weighted proportions of age group \( q \) in the MHS.

For specification (2), an adjusted catchment area value can be calculated as:

\[
\bar{y}_{ijl} = \hat{\gamma}_{il} + \hat{\beta}_i \hat{A}_{il} + \hat{\beta}_{2i} \hat{A}_{2i} + \ldots + \hat{\beta}_{5i} \hat{A}_{5i} + \hat{\beta}_{6i} \hat{\bar{P}},
\]

while the regional value is calculated using specification 1.

Standard errors can then be estimated using SUDAAN as the standard error of residuals for catchment areas or regions. These standard errors can be used in hypothesis tests comparing adjusted values to other adjusted values or to external benchmarks. Composite values are calculated as averages of regional or catchment area adjusted values of questions making up the composites, in which each question is equally weighted.

Benchmarks can also be adjusted for age and health status, as can scores taken from survey responses. If the benchmark data set contains age and health status information, we fit a model of the form

\[
y = \alpha + \beta_1 A_1 + \beta_2 A_2 + \ldots + \beta_5 A_5 + \beta_6 P
\]

where the \( A_i \)'s are age groups and \( P \) is health status. Then the adjusted benchmark is

\[
\hat{y}_l = \hat{\alpha} + \hat{\beta}_1 \hat{A}_1 + \hat{\beta}_2 \hat{A}_2 + \ldots + \hat{\beta}_5 \hat{A}_5 + \hat{\beta}_6 \hat{\bar{P}}
\]

using the mean values of \( A \) and \( P \) for beneficiary group \( l \).

The adjusted values for that beneficiary group can then be compared to a benchmark appropriate for their age distribution and health status.

In some cases, it may be desirable for a single benchmark to be presented for comparison with multiple beneficiary groups. We accomplish this by re-centering scores for beneficiary groups. In the Beneficiary Reports, described below, the benchmark presented is the all-users beneficiary group, but scores for many other beneficiary groups are also presented. Each score and benchmark is calculated for the appropriate beneficiary group. Then, a re-centering factor for each beneficiary group is calculated as the difference in adjusted benchmarks between a beneficiary group and the all-users group. For the all-users group, that re-centering factor is zero. The re-centering factor is added to the score for each region or catchment area for that beneficiary group. Thus, beneficiary groups can also be compared controlling for age and health status and can be compared to the same benchmark.
E. CALCULATING SCORES

Beneficiary Reports (see below) include four types of scores: CAHPS composites, ratings, a preventive care composite, and a healthy behaviors composite. Beginning Q1 FY 2014, the HCSDB survey transitioned from CAHPS version 4.0 to version 5.0. Additionally, benchmark data from the National Committee for Quality Assurance (NCQA) for FY 2017 were used in calculating benchmarks for FY 2019.

Composites and Ratings

The preventive care composite is calculated as \( P_i = \sum w_i r_i \), where \( w \) is the proportion of the eligible population for whom the preventive care measure is relevant, and \( r \) is the proportion of that eligible group receiving preventive care.

CAHPS composites are calculated as:

\[ S_i = \frac{1}{n_i} \sum (q_j / k_j), \]

where \( n_i \) is the number of questions in the composite \( i \), \( q_j \) is the number giving a favorable response to question \( j \) in the composite \( i \), and \( k_j \) is the number responding to that question \( j \). CAHPS ratings are calculated as

\[ S_i = \frac{q_i}{k_i}, \]

where \( q_i \) is the (weighted) number giving a favorable response and \( k_i \) is the (weighted) number responding to rating \( i \). All scores are adjusted for age and health status (see above).

F. TESTS FOR TREND

In the Beneficiary Reports (see below), we use linear regression to estimate a quarterly rate of change and test if it is statistically significantly different from zero (no change). Our estimate for the rate of change, \( T \), is

\[ T = \sum_{t=1}^{4} w_i (S_i - \bar{S})(t - \bar{t}) / \sum_{t=1}^{4} w_i (t - \bar{t})^2, \]

where \( t \) is the quarter, \( S_i \) is the score and \( w_i \) is the total weight of quarter \( i \)'s observations. In order to test the hypothesis that trend is zero, we use the standard error for the trend coefficient

\[ \sigma = \sqrt{\frac{\sum_{t=1}^{4} w_i^2 \sigma_t^2}{\sum_{t=1}^{4} w_i}}, \]

and

\[ S = \sigma / \sqrt{\sum_{t=1}^{4} w_i (t - \bar{t})^2 / \sum_{t=1}^{4} w_i} \]

where \( \sigma_t \) is the standard error for quarter \( t \). The hypothesis test is based on a t-test of the hypothesis that \( T=0 \), where \( n \) is the total number of observations for all 3 quarters \( p=\text{Prob}(\text{abs}(T/S)>0,n) \).
G. DEPENDENT AND INDEPENDENT VARIABLES

Dependent (i.e., outcome) variables represent the variables to be analyzed to answer the research questions. For example, beneficiary satisfaction and access are dependent variables in this analysis. The research questions are listed in Chapter 1.

Independent (i.e., explanatory) variables are entered into regression models to help to explain differences in one or more of the outcome variables. They may also be correlated with one or more dependent variables. For example, a beneficiary’s satisfaction with health care may be correlated with their age and/or TRICARE Prime enrollment status. Each table is designed to help determine whether a particular dependent variable is correlated with a particular independent variable.

In analyzing the relationship between dependent and independent variables, Mathematica produced charts and tables that are found in the reports described below. Generally, dependent variables form the rows of the tables and the vertical axes of the charts. Independent variables form the columns of the tables and the horizontal axes of the charts. Beginning with the HCSDB in a SAS format, Mathematica programmers utilized SAS procedures such as PROC FREQ and PROC MEANS and SAS-callable SUDAAN procedures such as PROC DESCRIPT and PROC CROSSTAB to generate the relevant statistics (e.g., percents, means, and standard errors). These statistical values were exported directly from SAS to Excel tables using a dynamic data exchange to populate the cells of the tables. Graphical displays were generated from table values wherever feasible.

H. REPORTS

This section lists the three types of reports produced and states the main purpose of each report: 2019 TRICARE Beneficiary Reports, the TRICARE Consumer Watch, and the "Health Care Survey of DoD Beneficiaries: Annual Report." The 2019 TRICARE Beneficiary Reports and the TRICARE Consumer Watch are presented on a quarterly basis (for 3 of 4 quarters) and display results from the most recent quarter. The “Health Care Survey of DoD Beneficiaries: Annual Report” is produced annually and describes findings from all three quarters of survey data. All of these reports are available on the TRICARE website and comply with the standards in Section 508 of the Federal Acquisition Regulation (FAR) to be usable by persons with disabilities.

1. 2019 TRICARE Beneficiary Reports

a. Purpose

The purpose of the Beneficiary Reports is to provide TRICARE Regional offices, services and MTF commanders with a comprehensive description of TRICARE beneficiaries’ satisfaction with care, access to care, and use of preventive care, and to compare such with other regions and catchment areas, and with relevant national benchmarks. MHS scores are adjusted using demographic characteristics. Both quarterly and annual Beneficiary Reports are produced. The quarterly reports present results from the most recent quarter for each region, service and for USA MHS by beneficiary status and enrollment group, making it easy for the reader to compare findings across groups and quarters. The annual report is a cumulative report that combines results from three quarters and previous years and presents results by catchment area, region, and service.

b. Beneficiary Report Production

1. Content

The quarterly Beneficiary Reports present 11 scores for all beneficiary groups and all enrollment groups by region and USA MHS overall. The annual Beneficiary Report contains additional figures for the East region. This region is the union of the East-North region and the East-South region. Scores are presented in the following areas: getting needed care; getting care quickly; how well
doctors communicate; customer service; claims processing; rating of the health plan, health care, personal doctor, and specialist; healthy behavior; and preventive care standards. The first 6 scores are CAHPS composites, which encompass responses to several related survey questions. The CAHPS composite questions are shown in Appendix E. The scores are presented against national benchmarks.

The four ratings of health care and health care providers are health plan, health care, personal doctor, and specialist. Each rating is based on a scale of 0 to 10, where 0 is the worst and 10 is the best. The scores are adjusted for patient age and health status and are presented relative to national benchmarks.

The DHA Standard Composite for preventive care is based on how beneficiaries compare preventive care services offered through the MHS with the Healthy People 2020 goals. Preventive care indicators include prenatal care, hypertension, mammography, and Pap smears.

Healthy behavior combines the non-smoking rate, the rate at which smokers are counseled to quit, and the percent non-obese.

2. Format

a. Programming Specifications

Data for the Beneficiary Reports are organized in a SAS data set, consisting of records indexed by region, service, catchment area, enrollment group, beneficiary category, and table column. A benchmark corresponding to the MHS population is also included in the SAS data set. Records contain scores and categorical variables showing the existence and directions of significant differences. The benchmark record contains national mean values, where available, for a comparable non-MHS population.

Data files serve as the basis for the electronic reports and quality assurance. The file for the quarterly Beneficiary Reports is updated each quarter and referenced by the report card application. In each quarter, a separate file is created. The quarterly and annual Beneficiary Reports data are uploaded to a SQL database, and ColdFusion queries extract the data that populates webpages corresponding to the cells in the tables of the reports described below. Appendix G contains the programs to generate the Beneficiary Reports.

b. Web Specifications

Quarterly Beneficiary Reports are published in an interactive tabular HTML format on TRICARE's website, allowing users to filter the reports to follow the performance of the MHS over time by enrollment status and beneficiary group. Each report consists of several pages of tables. The first set of tables presents the findings for a single quarter for all enrollment and beneficiary groups, by region and USA MHS. A second set of tables presents the findings for the current quarter and for the past quarters for each enrollment and beneficiary group, by region and USA MHS. Significant differences between the scores and the benchmark are indicated by color, bolding and italics, and footnotes. Scores significantly above the benchmark are green and bold. Scores significantly below the benchmark are red and italicized.

Like the quarterly report, the annual report is presented in HTML tabular format. One set of tables shows cumulative scores for the 2019 HCSDSB by region for all beneficiary groups and enrollment groups. Another set shows scores for the questions that make up the composite. A third set shows composites or ratings from prior years. The fourth set of tables shows scores for the catchment areas that comprise the MHS regions.

Starting with FY 2014, users also have the option of generating weighted frequency tables of survey response data, by question or by question and analysis group, using drop down menus on the
reporting website. Along with frequencies, we also report standard errors to indicate the precision of the survey estimates.

2. TRICARE Consumer Watch

a. Purpose

Like the TRICARE Beneficiary Reports, the TRICARE Consumer Watch is targeted to TRICARE Regional offices, services, and MTF commanders. TRICARE Consumer Watch presents key results from the quarterly HCSDB in graphical format. The exhibits present TRICARE beneficiaries' experiences with their health care and health plan and utilization rates for preventive services. The TRICARE Consumer Watch is produced on a quarterly basis for all regions and three service affiliations. In the last quarter, the TRICARE Consumer Watch is produced for all catchment areas.

Two versions of the quarterly TRICARE Consumer Watch are produced: one for all Prime Enrollees, and one comparing beneficiaries who are enrolled to military facilities (direct care users) with those who rely on civilian care financed by TRICARE through Prime or Select (purchased care users).

b. 2019 TRICARE Consumer Watch Production

1. Content

The Consumer Watch contains graphs of four ratings and five composite scores. These graphs are based on data from the Beneficiary Reports. Beneficiaries are asked to rate their experiences with their health care and health plan, and their personal provider on a scale of 0 to 10 where 0 is the worst and 10 is the best. Composite scores evaluate beneficiaries’ experiences with the following: getting needed care, getting care quickly, how well doctors communicate, customer service, and claims processing. Using data from the National Committee for Quality Assurance (NCQA), ratings and composites are compared to experiences of individuals in civilian health plans. Ratings and composites are also compared to results from previous surveys.

Utilization of preventive care services are measured against the goals established by Healthy People 2020 as well as results from the prior years. Preventive care indicators include preventive cancer screenings, such as mammography and Pap smears, hypertension screening, and prenatal care. Preventive care also includes an obesity rate, a non-smoking rate and the percentage of smokers counseled to quit.

2. Format

a. Programming Specifications

Data for the Consumer Watch are organized in a SAS data set consisting of records indexed by region, catchment area, enrollment group, and beneficiary category. Graphs of the rating and composite scores were produced using the same programs as for the TRICARE Beneficiary Reports. The data file for the Consumer Watch is updated each quarter. The programs to generate the Consumer Watch are in Appendix H and Appendix I.

b. Report Production Specifications

Though the Consumer Watch files reside on TRICARE’s website, they are designed to be accessed primarily in print form. The reports are created in portable document format (PDF). The Consumer Watch key findings are presented as bar and line graphs. Preventive care scores are presented in table format. The last several pages of the report are tables that display the numbers that represent the charts on the first few pages of the report. These tables were added as a supplement for 508 compliance.

a. Purpose

The purpose of the “Health Care Survey of DoD Beneficiaries: Annual Report” is to provide OASD (HA) and in particular DHA with a comprehensive national summary of the HCSDB findings. The “Health Care Survey of DoD Beneficiaries: Annual Report” bar charts reflect survey data from all respondents in the MHS and incorporates data from the adult HCSDB for 2019 and previous years.

b. Procedures for Report Production

1. Content

The content reflects areas that are relevant for policy makers. These topics include health plan choice, usual sources of care, health plan and health care ratings, access to care, healthy behaviors, doctor communication, tobacco cessation methods, access to care among pregnant women, beneficiaries’ experiences seeking information on their health plan, and predicting healthcare ratings.

2. Programming Specification

Programs for calculating the statistics appearing in the report are written in SAS-callable SUDAAN. Means and proportions and their standard errors are calculated using PROC DESCRIPT or PROC CROSSTAB. Tests for linear trends are performed using PROC REGRESS or PROC RLOGIST. Values are compared with benchmarks from the National Committee for Quality Assurance (NCQA). The benchmarks are readjusted for age and health status using the methods described in Chapter 3, Section D above.

3. Report Production

Numbers and text are presented using publishing software following models developed by importing SUDAAN results into Excel as a text file. Methods used in the Annual Report are also described in the “Health Care Survey of DoD Beneficiary: Annual Report.”

Health Care Survey of DoD Beneficiaries

A world-wide survey of beneficiaries eligible for health care coverage through the military health system

October 2018
Privacy Advisory

Providing information in this Survey is voluntary. There is no penalty nor will your benefits be affected if you choose not to respond, although maximum participation is encouraged so that the data will be complete and representative.

The Survey was written so that answers should not require you to provide any personally identifiable information (PII), but please be assured that any PII provided will be treated as confidential. Your responses are collected via a secure system which does not collect any information that could be used to determine your identity.

Answering the questions is voluntary; you may stop the Survey at any time.

According to the Privacy Act of 1974 (5 U.S.C. §552a), the Department of Defense is required to inform you of the purposes and use of this survey. Please read it carefully.

**Authority:** 10 U.S.C. §1074 (Medical and Dental Care for Members and Certain Former Members, as amended by National Defense Authorization Act of 1993, Public Law 102-484, §706); 10 U.S.C. §1074f (Medical Tracking System for Members Deployed Overseas); 32 C.F.R. §199.17 (TRICARE Program); 45 C.F.R. Part 160 Subparts A and E of Part 164 (Health Insurance Portability and Accountability Act of 1996, Privacy Rule); DoD 6025.18-R (Department of Defense Health Information Privacy Regulation); DoD 6025.13-R (Military Health System Clinical Quality Assurance Program Regulation); 64 FR 22837 (DHA 08 – Health Affairs Survey Data Base, April 28, 1999); and, E.O. 9397 (as amended, November 20, 2008, for SSN collection).

**Purpose:** This survey helps health policy makers gauge beneficiary satisfaction with the current military health care system and provides valuable input from beneficiaries that will be used to improve the Military Health System.

**Routine Uses:** None.

**Disclosure:** Participation is voluntary. Failure to respond will not result in any penalty to the respondent; however maximum participation is encouraged so that data will be as complete and representative as possible.
SURVEY INSTRUCTIONS

Thank you for taking the time to participate in this online survey.

Please note, if the survey is idle for more than 5 minutes, you will be logged out automatically to protect your privacy. If that happens, simply wait 15 minutes and log back in. Please keep your password because you may need it later.

During the survey, please do not use your browser’s FORWARD and BACK buttons. Instead, please always use the buttons below to move backward and forward through the survey.

To begin, just click on the “Next” button below. This will take you right into the survey.
As an eligible TRICARE beneficiary, please complete this survey even if you did not receive your health care from a military facility.

Please recognize that some specific questions about TRICARE benefits may not apply to you, depending on your entitlement and particular TRICARE program.

This survey is about the health care of the person whose name appears on the cover letter. The questionnaire should be completed by that person. If you are not the addressee, please give this survey to that person.

Question 1: Are you the person whose name appears on the cover letter?

Variable name: H19001

</table>
YOUR HEALTH CARE IN THE LAST 12 MONTHS

These questions ask about your own health care. Do not include care you got when you stayed overnight in a hospital. Do not include the times you went for dental care visits.

Question 8: In the last 12 months, where did you go most often for your health care?

MARK ONLY ONE ANSWER

Variable name: H19005

Editing notes: None

THANK YOU FOR TAKING THE TIME TO COMPLETE THE SURVEY!

Your generous contribution will greatly aid efforts to improve the health of our military community.
Health Care Survey of DoD Beneficiaries

A world-wide survey of beneficiaries eligible for health care coverage through the military health system

January 2019
THIS PAGE HAS BEEN LEFT BLANK FOR DOUBLE-SIDED COPYING.
Privacy Advisory

Providing information in this Survey is voluntary. There is no penalty nor will your benefits be affected if you choose not to respond, although maximum participation is encouraged so that the data will be complete and representative.

The Survey was written so that answers should not require you to provide any personally identifiable information (PII), but please be assured that any PII provided will be treated as confidential. Your responses are collected via a secure system which does not collect any information that could be used to determine your identity.

Answering the questions is voluntary; you may stop the Survey at any time.

---

According to the Privacy Act of 1974 (5 U.S.C. §552a), the Department of Defense is required to inform you of the purposes and use of this survey. Please read it carefully.

**Authority:** 10 U.S.C. §1074 (Medical and Dental Care for Members and Certain Former Members, as amended by National Defense Authorization Act of 1993, Public Law 102-484, §706); 10 U.S.C. §1074f (Medical Tracking System for Members Deployed Overseas); 32 C.F.R. §199.17 (TRICARE Program); 45 C.F.R. Part 160 Subparts A and E of Part 164 (Health Insurance Portability and Accountability Act of 1996, Privacy Rule); DoD 6025.18-R (Department of Defense Health Information Privacy Regulation); DoD 6025.13-R (Military Health System Clinical Quality Assurance Program Regulation); 64 FR 22837 (DHA 08 – Health Affairs Survey Data Base, April 28, 1999); and, E.O. 9397 (as amended, November 20, 2008, for SSN collection).

**Purpose:** This survey helps health policy makers gauge beneficiary satisfaction with the current military health care system and provides valuable input from beneficiaries that will be used to improve the Military Health System.

**Routine Uses:** None.

**Disclosure:** Participation is voluntary. Failure to respond will not result in any penalty to the respondent; however maximum participation is encouraged so that data will be as complete and representative as possible.
SURVEY INSTRUCTIONS

Thank you for taking the time to participate in this online survey.

Please note, if the survey is idle for more than 5 minutes, you will be logged out automatically to protect your privacy. If that happens, simply wait 15 minutes and log back in. Please keep your password because you may need it later.

During the survey, please do not use your browser’s FORWARD and BACK buttons. Instead, please always use the buttons below to move backward and forward through the survey.

To begin, just click on the “Next” button below. This will take you right into the survey.
As an eligible TRICARE beneficiary, please complete this survey even if you did not receive your health care from a military facility.

Please recognize that some specific questions about TRICARE benefits may not apply to you, depending on your entitlement and particular TRICARE program.

This survey is about the health care of the person whose name appears on the cover letter. The questionnaire should be completed by that person. If you are not the addressee, please give this survey to that person.

**Question 1: Are you the person whose name appears on the cover letter?**

**Variable name:** H19001

THANK YOU FOR TAKING THE TIME TO COMPLETE THE SURVEY!

Your generous contribution will greatly aid efforts to improve the health of our military community.
THIS PAGE HAS BEEN LEFT BLANK FOR DOUBLE-SIDED COPYING.
Health Care Survey of DoD Beneficiaries

A world-wide survey of beneficiaries eligible for health care coverage through the military health system

March 2019
Privacy Advisory

Providing information in this Survey is voluntary. There is no penalty nor will your benefits be affected if you choose not to respond, although maximum participation is encouraged so that the data will be complete and representative.

The Survey was written so that answers should not require you to provide any personally identifiable information (PII), but please be assured that any PII provided will be treated as confidential. Your responses are collected via a secure system which does not collect any information that could be used to determine your identity.

Answering the questions is voluntary; you may stop the Survey at any time.

According to the Privacy Act of 1974 (5 U.S.C. §552a), the Department of Defense is required to inform you of the purposes and use of this survey. Please read it carefully.

Authority: 10 U.S.C. §1074 (Medical and Dental Care for Members and Certain Former Members, as amended by National Defense Authorization Act of 1993, Public Law 102-484, §706); 10 U.S.C. §1074f (Medical Tracking System for Members Deployed Overseas); 32 C.F.R. §199.17 (TRICARE Program); 45 C.F.R. Part 160 Subparts A and E of Part 164 (Health Insurance Portability and Accountability Act of 1996, Privacy Rule); DoD 6025.18-R (Department of Defense Health Information Privacy Regulation); DoD 6025.13-R (Military Health System Clinical Quality Assurance Program Regulation); 64 FR 22837 (DHA 08 – Health Affairs Survey Data Base, April 28, 1999); and, E.O. 9397 (as amended, November 20, 2008, for SSN collection).

Purpose: This survey helps health policy makers gauge beneficiary satisfaction with the current military health care system and provides valuable input from beneficiaries that will be used to improve the Military Health System.

Routine Uses: None.

Disclosure: Participation is voluntary. Failure to respond will not result in any penalty to the respondent; however maximum participation is encouraged so that data will be as complete and representative as possible.
SURVEY INSTRUCTIONS
Thank you for taking the time to participate in this online survey.

Please note, if the survey is idle for more than 5 minutes, you will be logged out automatically to protect your privacy. If that happens, simply wait 15 minutes and log back in. Please keep your password because you may need it later.

During the survey, please do not use your browser’s FORWARD and BACK buttons. Instead, please always use the buttons below to move backward and forward through the survey.

To begin, just click on the “Next” button below. This will take you right into the survey.
As an eligible TRICARE beneficiary, please complete this survey even if you did not receive your health care from a military facility.

Please recognize that some specific questions about TRICARE benefits may not apply to you, depending on your entitlement and particular TRICARE program.

This survey is about the health care of the person whose name appears on the cover letter. The questionnaire should be completed by that person. If you are not the addressee, please give this survey to that person.

Question 1: Are you the person whose name appears on the cover letter?

YOUR HEALTH PLAN

The next questions ask about your experience with your health plan. By your health plan, we mean the health plan you marked in Question 3.

Question 39: In the last 12 months, did you look for any information in written materials or on the Internet about how your health plan works?

Variable name: H19034

Editing notes: See Note 12

<table>
<thead>
<tr>
<th>Response</th>
<th>Directions</th>
<th>Value</th>
<th>Percent</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td></td>
<td>1</td>
<td>32.4%</td>
</tr>
<tr>
<td>No</td>
<td>Go to Question 41</td>
<td>2</td>
<td>67.6%</td>
</tr>
</tbody>
</table>

Question 40: In the last 12 months, how often did the written material or the Internet provide the information you needed about how your plan works?

Variable name: H19035

Editing notes: See Note 12

<table>
<thead>
<tr>
<th>Response</th>
<th>Value</th>
<th>Percent</th>
</tr>
</thead>
<tbody>
<tr>
<td>Never</td>
<td>1</td>

Missing values ‘.’ and incomplete grids ‘.I’ are encoded prior to implementation of the Coding Scheme.

Notes (see below).
### Coding Table for Note 1:
**H19003, H19004, S19BQ01, S19BQ02A-S19BQ02L and S19BQ03A-S19BQ03K**

<table>
<thead>
<tr>
<th>N1</th>
<th>H19003</th>
<th>H19004, S19BQ01, S19BQ02A-S19BQ02L and S19BQ03A-S19BQ03K are:</th>
<th>H19003 is coded as:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>1-17: Health plan</td>
<td>Any value</td>
<td>Stands as original value</td>
</tr>
</tbody>
</table>

| 2  | -6: No usage in past 12 months or -5: not sure | Any value | Stands as original value |

| 3  | Missing response | Any value | Stands as original value |

* Indication of backward coding (B) or forward coding (F).

### Coding Table for Note 1_BQ1:
**H19003, S19BQ01, S19BQ02A-S19BQ02L, S19BQ03A-S19BQ03K**

<table>
<thead>
<tr>
<th>N1_BQ1</th>
<th>S19BQ01</th>
<th>S19BQ02A-S19BQ02L and S19BQ03A-S19BQ03K are:</th>
<th>H19003 is coded as:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>.N: Valid skip, or .C: question should be skipped</td>
<td>Matches S19BQ03 or equals 11: TRICARE Plus, 13: Foreign govt, 16: CHCBP, or 19: TRICARE supp. insurance</td>
<td>Stands as original value</td>
</tr>
</tbody>
</table>

| 2     | 1: Yes or -5: don’t know | Any value | Stands as original value |

| 3     | 1: Yes or -5: don’t know | At least one positive response | Does not match |

| 4     | 1: Yes or -5: don’t know | No positive response | Does not match |

| 5     | 2: No or .: missing | Matches S19BQ03 | 1: Yes |

| 6     | 2: No or .: missing | Does not match or equals 11: TRICARE Plus, 13: Foreign govt, 16: CHCBP, or 19: TRICARE supp. insurance | 2: No |

* Indication of backward coding (B) or forward coding (F).

**Definition of “positive response” in Coding Table for Note 1_BQ:**
A response of 1:Yes to S19BQ02A-S19BQ02L or a marked response to S19BQ03A-S19BQ03K.
### Coding Table for Note 1 BQ2:
**S19BQ03A-S19BQ03I, S19BQ03K**

<table>
<thead>
<tr>
<th>N1_BQ2</th>
<th>S19BQ03A-S19BQ03I are:</th>
<th>S19BQ03K is:</th>
<th>S19BQ03K is coded as:</th>

<td>F</td>
</tr>
<tr>
<td>8</td>
<td>.: Missing</td>
<td>“All are blank”</td>
<td>Stands as original value</td>
<td>Stand as original value</td>
<td></td>
</tr>
</tbody>
</table>

* Indication of backward coding (B) or forward coding (F).

Definition of “all are blank” in Coding Table for Note 2:
Responses to H19007-H19008 are all missing.

Definition of “blank or NA” in Coding Table for Note 2:
All of the following are true: H19007-H19008 are a combination of not applicable (-6) or missing.

Definition of “one marked and one NA” in Coding Table for Note 2:
H19007-H19008 have one response marked not applicable (-6) and one marked response (other than not applicable).

Definition of “marked” in Coding Table for Note 2:
Any pattern of marks outside the definitions “all are blank”, “one marked and one NA”, and “blank or NA”.

* Indication of backward coding (B) or forward coding (F).

Definition of “blank or NA” in Coding Table for Note 6:
All of the following are true: H19020 is either 0: None or missing and H19021-H19024 are either not applicable (-6) or missing.

Definition of “marked” in Coding Table for Note 6:
Any pattern of marks for H19020-H19024 outside the definition “blank or NA”.

<td>.: Missing</td>
<td>“All are blank”</td>
<td>Stands as original value</td>
<td>Stands as original value</td>
<td></td>
</tr>
</tbody>
</table>

* Indication of backward coding (B) or forward coding (F).

Definition of “all are blank” in Coding Table for Note 9:
Responses to H19029-H19031 are all missing.

Definition of “blank or NA” in Coding Table for Note 9:
All of the following are true: H19029 and H19031 are a combination of not applicable (-6) or missing. H19030 is either missing or 0: None.

Definition of “marked” in Coding Table for Note 9:
Any pattern of marks outside the definitions “all are blank” and “blank or NA”.

### Coding Table for Note 10: H19030, H19031

<table>
<thead>

</tbody>
</table>

* Indication of backward coding (B) or forward coding (F).

**Definition of “all are blank” in Coding Table for Note 17:**
Responses to H19046-H19047 are all missing.

**Definition of “blank or NA” in Coding Table for Note 17:**
Responses to H19046-H19047 are either all not applicable (-6) or a combination of missing and not applicable (-6).

**Definition of “blank or don’t know” in Coding Table for Note 17:**
Responses to H19046-H19047 are either all don’t know (-5) or a combination of missing and don’t know (-5).

**Definition of “NA or don’t know” in Coding Table for Note 17:**
Responses to H19046-H19047 are a combination of not applicable (-6) and don’t know (-5).

**Definition of “marked” in Coding Table for Note 17:**
Any pattern of marks outside the definitions “all are blank,” “blank or NA,” “blank or don’t know,” or “NA or don’t know”.

<td>2: Female</td>
</tr>
</tbody>
</table>

SEX (PNSEXCD) is the gender from the DEERS file. This variable is not used to override questionnaire responses, but to clear up any omissions or discrepancies in the responses.

XSEXA is the recoded gender variable after taking into account the self-reported response (H19058), any responses to gender-specific questions, and the gender of the sample beneficiary from DEERS.
Note 19 (Part B):
XSEXA, H19059B, H19060-H19064

| 8    | :: Missing | Any value            |

* Indication of backward coding (B) or forward coding (F).

Definition of “all are blank” in Coding Table for Note 19b:
All variables H19059B--H19064 are missing.

Definition of “marked” in Coding Table for Note 19b:
Any pattern of marks outside the definition “all are blank”.

Coding Table for Note 20
XSEXA, AGE, H19060, H19061

<table>
<thead>

</tr>
</tbody>
</table>

* Indication of backward coding (B) or forward coding (F).

Definition of “Height within range for gender” in Coding Table for Note 23_HT:
From 2006 NHIS, height for men is 63”-76” (5’3”-6’4”), height for woman is 59”-70” (4’11”-5’10”).

Definition of “Height out of range for gender” in Coding Table for Note 23_HT:
Any height outside the definition of “Height within range for gender”.

Definition of “Height within range for either gender” in Coding Table for Note 23_HT:
Use lowest and highest height from either gender to set range: 59”-76” (4’11”-6’4”).

Definition of “Height out of range for either gender” in Coding Table for Note 23_HT:
Any height outside the definition of “Height within range for either gender”.

**Coding Table for Note 23_WT:**

<td>4</td>
<td>.: Missing</td>
<td>“Weight out of range for either gender”</td>
<td>.O: Out of range</td>
<td>F</td>
</tr>
</tbody>
</table>

* Indication of backward coding (B) or forward coding (F).

Definition of “Weight within range for gender” in Coding Table for Note 23_WT:
From 2006 NHIS, weight for men is 126-299 pounds, weight for woman is 100-274 pounds.

Definition of “Weight out of range for gender” in Coding Table for Note 23_WT:
Any height outside the definition of “Weight within range for gender”.

Definition of “Weight within range for either gender” in Coding Table for Note 23_WT:
Use lowest and highest weight from either gender to set range: 100-299 pounds.

Definition of “Weight out of range for either gender” in Coding Table for Note 23_WT:
Any height outside the definition of “Weight within range for either gender”.

</tbody>
</table>

* Indication of backward coding (B) or forward coding (F).

### Definitions

**“all are blank”** in Coding Table for Note 2:
Responses to H19007-H19008 are all missing.

**“blank or NA”** in Coding Table for Note 2:
All of the following are true: H19007-H19008 are a combination of not applicable (-6) or missing.

**“one marked and one NA”** in Coding Table for Note 2:
H19007-H19008 have one response marked not applicable (-6) and one marked response (other than not applicable).

**“marked”** in Coding Table for Note 2:
Any pattern of marks outside the definitions “all are blank”, “one marked and one NA”, and “blank or NA”.

---

B.21
**Coding Table for Note 3: H19009, H19010, H19011**

<table>
<thead>

* Indication of backward coding (B) or forward coding (F).

Definition of “blank or NA” in Coding Table for Note 6:
All of the following are true: H19020 is either 0: None or missing and H19021-H19024 are either not applicable (-6) or missing.

Definition of “marked” in Coding Table for Note 6:
Any pattern of marks for H19020-H19024 outside the definition “blank or NA”.

<td>“Blank or don’t know” or “all are blank”</td>
<td>Stands as original value</td>
<td>Stand as original value</td>
<td></td>
</tr>
</tbody>
</table>

* Indication of backward coding (B) or forward coding (F).

Definition of “all are blank” in Coding Table for Note 17:
Responses to H19046-H19047 are all missing.

Definition of “blank or NA” in Coding Table for Note 17:
Responses to H19046-H19047 are either all not applicable (-6) or a combination of missing and not applicable (-6).

Definition of “blank or don’t know” in Coding Table for Note 17:
Responses to H19046-H19047 are either all don’t know (-5) or a combination of missing and don’t know (-5).

Definition of “NA or don’t know” in Coding Table for Note 17:
Responses to H19046-H19047 are a combination of not applicable (-6) and don’t know (-5).

Definition of “marked” in Coding Table for Note 17:
Any pattern of marks outside the definitions “all are blank,” “blank or NA,” “blank or don’t know,” or “NA or don’t know”.

<td>All missing</td>
<td>2: Female</td>
</tr>
</tbody>
</table>

**SEX (PNSEXCD)** is the gender from the DEERS file. This variable is not used to override questionnaire responses, but to clear up any omissions or discrepancies in the responses.

**XSEXA** is the recoded gender variable after taking into account the self-reported response (H19058), any responses to gender-specific questions, and the gender of the sample beneficiary from DEERS.
**Note 19 (Part B): XSEXA, H19059B, H19060-H19064**

<table>
<thead>
<tr>

<tr>
<td></td>
<td>1: Male or 2: female</td>
<td>&quot;Height out of range for gender&quot;</td>
</tr>
<tr>
<td></td>
<td>.: Missing</td>
<td>&quot;Height within range for either gender&quot; or .: missing</td>
</tr>
<tr>
<td></td>
<td>.: Missing</td>
<td>&quot;Height out of range for either gender&quot;</td>
</tr>
</tbody>
</table>

* Indication of backward coding (B) or forward coding (F).

Definition of “Height within range for gender” in Coding Table for Note 23 HT: From 2006 NHIS, height for men is 63”-76” (5’3”-6’4”), height for woman is 59”-70” (4’11”-5’10”).

Definition of “Height out of range for gender” in Coding Table for Note 23 HT: Any height outside the definition of “Height within range for gender”.

Definition of “Height within range for either gender” in Coding Table for Note 23 HT: Use lowest and highest height from either gender to set range: 59”-76” (4’11”-6’4”).

Definition of “Height out of range for either gender” in Coding Table for Note 23 HT: Any height outside the definition of “Height within range for either gender”.

### Coding Table for Note 23 WT: XSEXA, H19072

</tr>
<tr>
<td>8</td>
<td>.: Missing</td>
<td>“All are blank”</td>
<td>Stands as original value</td>
<td>Stand as original value</td>
</tr>
</tbody>
</table>

* Indication of backward coding (B) or forward coding (F).

### Definition of “all are blank” in Coding Table for Note 2:
Responses to H19007-H19008 are all missing.

### Definition of “blank or NA” in Coding Table for Note 2:
All of the following are true: H19007-H19008 are a combination of not applicable (-6) or missing.

### Definition of “one marked and one NA” in Coding Table for Note 2:
H19007-H19008 have one response marked not applicable (-6) and one marked response (other than not applicable).

### Definition of “marked” in Coding Table for Note 2:
Any pattern of marks outside the definitions “all are blank”, “one marked and one NA”, and “blank or NA”.

B.36
### Coding Table for Note 3: H19009, H19010, H19011

<table>
<thead>
<tr>
<th>N3</th>
<th>H19009 is:</th>

<tr>
<td>8</td>
<td>.: Missing</td>
<td>“All are blank”</td>
<td>Stands as original value</td>
<td>Stand as original value</td>
<td></td>
</tr>
</tbody>
</table>

* Indication of backward coding (B) or forward coding (F).

**Definition of “all are blank” in Coding Table for Note 3:**
Responses to H19010-H19011 are all missing.

**Definition of “blank or NA” in Coding Table for Note 3:**
All of the following are true: H19010-H19011 are a combination of not applicable (-6) or missing.

**Definition of “one marked and one NA” in Coding Table for Note 3:**
H19010-H19011 have one response marked not applicable (-6) and one marked response (other than not applicable).

**Definition of “marked” in Coding Table for Note 3:**
Any pattern of marks outside the definitions “all are blank”, “one marked and one NA”, and “blank or NA”.

B.37
### Coding Table for Note 4:
**H19013, H19014-H19017**

<table>
<thead>
<tr>
<th></th>
<th>H19013</th>

* Indication of backward coding (B) or forward coding (F).
### Coding Table for Note 9:
**H19028, H19029-H19031**

| N9 | H19028 is: | H19029-H19031 are coded as: | H19028 is coded as: | H19029 is coded as: | H19030-H19031 are coded as: | *
|----|------------|-----------------------------|---------------------|---------------------|-------------------------------|---
| 1  | 1: Yes     | Any value                  | Stands as original value | .: Missing if -6; stands as original value otherwise | Stand as original value       | F  
| 2  | 2: No or .: missing | At least one is “marked” | 1: Yes | .: Missing if -6; stands as original value otherwise | Stand as original value       | B  
| 3  | 2: No      | “All are blank” or “blank or NA” | Stands as original value | .: Missing if -6; stands as original value otherwise | .N: Valid skip if missing; .C: question should be skipped if marked | F  
| 4  | .: Missing | “Blank or NA”               | 2: No | .: Missing if -6; stands as original value otherwise | .N: Valid skip if missing; .C: question should be skipped if marked | B  
| 5  | .: Missing | “All are blank”             | Stands as original value | Stands as original value | Stand as original value |   

* Indication of backward coding (B) or forward coding (F).

Definition of “all are blank” in Coding Table for Note 9:
Responses to H19029-H19031 are all missing.

Definition of “blank or NA” in Coding Table for Note 9:
All of the following are true: H19029 and H19031 are a combination of not applicable (-6) or missing. H19030 is either missing or 0: None.

Definition of “marked” in Coding Table for Note 9:
Any pattern of marks outside the definitions “all are blank” and “blank or NA”.

### Coding Table for Note 10:
**H19030, H19031**

| N10 | H19030 is: | H19031 is: | H19030 is coded as: | H19031 is coded as: | *
|-----|------------|------------|---------------------|---------------------|---
| 1   | .N: Valid skip, or .C: question should be skipped | .N: Valid skip, or .C: question should be skipped | Stands as original value | Stands as original value |   
| 2   | 1-5: Specialists | 0-10 or .: missing | Stands as original value | Stands as original value |   
| 3   | 1-5: Specialists or .: missing | -6: Didn’t see a specialist in the last 12 months | 0: None | .C: Question should be skipped | B  
| 4   | 0: None | Any value | Stands as original value | .N: Valid skip if missing; .C: question should be skipped if marked | F  
| 5   | .: Missing | 0-10 or .: missing | Stands as original value | Stands as original value |   

* Indication of backward coding (B) or forward coding (F).
**Coding Table for Note 10_B1:**

<td>Stand as original value</td>
<td></td>
</tr>
</tbody>
</table>

* Indication of backward coding (B) or forward coding (F).

Definition of “all are blank” in Coding Table for Note 10_B1:
Responses to S19B03-S19B04 are all missing.

Definition of “blank or NA” in Coding Table for Note 10_B1:
All of the following are true: S19B03-S19B04 are a combination of not applicable (-6) or missing.

Definition of “marked” in Coding Table for Note 10_B1:
Any pattern of marks outside the definitions “all are blank” and “blank or NA”.

<tr>
<td>5</td>
<td>-5: Don’t know</td>
<td>“Blank or don’t know” or “all are blank”</td>
<td>Stands as original value</td>
<td>.N: Valid skip if missing; .C: question should be skipped if marked</td>
<td>F</td>
</tr>
<tr>
<td>6</td>
<td>.: Missing</td>
<td>“Blank or don’t know” or “all are blank”</td>
<td>Stands as original value</td>
<td>Stand as original value</td>
<td></td>
</tr>
</tbody>
</table>

* Indication of backward coding (B) or forward coding (F).

Definition of “all are blank” in Coding Table for Note 17:
Responses to H19046-H19047 are all missing.

Definition of “blank or NA” in Coding Table for Note 17:
Responses to H19046-H19047 are either all not applicable (-6) or a combination of missing and not applicable (-6).

Definition of “blank or don’t know” in Coding Table for Note 17:
Responses to H19046-H19047 are either all don’t know (-5) or a combination of missing and don’t know (-5).

Definition of “NA or don’t know” in Coding Table for Note 17:
Responses to H19046-H19047 are a combination of not applicable (-6) and don’t know (-5).

Definition of “marked” in Coding Table for Note 17:
Any pattern of marks outside the definitions “all are blank,” “blank or NA,” “blank or don’t know,” or “NA or don’t know”.

</tr>
</tbody>
</table>

SEX (PNSEXCD) is the gender from the DEERS file. This variable is not used to override questionnaire responses, but to clear up any omissions or discrepancies in the responses.

XSEXA is the recoded gender variable after taking into account the self-reported response (H19058), any responses to gender-specific questions, and the gender of the sample beneficiary from DEERS.
Note 19 (Part B):
XSEXA, H19059B, H19060-H19064

<table>
<thead>
<tr>

Definition of “Number within range” in Coding Table for Note 23_BG3:
Any value not greater than 30.

Definition of “Number out of range” in Coding Table for Note 23_BG3:
Any value greater than 30 except 88.
### Coding Table for Note 23_BE:

**S19BE01A-S19BE01K**

<table>
<thead>
<tr>
<th>N23_BE1</th>
<th>S19BE02A-J are:</th>
<th>S19BE02K is:</th>
<th>S19BE02A-J are coded as:</th>
<th>S19BE02K is coded as:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Marked</td>
<td>Marked</td>

<tr>
<td>4</td>
<td>.: Missing</td>
<td>“Height out of range for either gender”</td>
<td>.O: Out of range F</td>
</tr>
</tbody>
</table>

* Indication of backward coding (B) or forward coding (F).

Definition of “Height within range for gender” in Coding Table for Note 23_HT:
From 2006 NHIS, height for men is 63”-76” (5’3”-6’4”), height for woman is 59”-70” (4’11”-5’10”).

Definition of “Height out of range for gender” in Coding Table for Note 23_HT:
Any height outside the definition of “Height within range for gender”.

Definition of “Height within range for either gender” in Coding Table for Note 23_HT:
Use lowest and highest height from either gender to set range: 59”-76” (4’11”-6’4”).

Definition of “Height out of range for either gender” in Coding Table for Note 23_HT:
Any height outside the definition of “Height within range for either gender”.

B.50
**Coding Table for Note 23_WT:**

**XSEXA, H19072**

| N23_WT | XSEXA is: | H19072 is: | H19072 is coded as: | *
|--------|-----------|-------------|----------------------|------
| 1      | 1: Male or 2: female | “Weight within range for gender” or .: missing | Stands as original value |     |
| 2      | 1: Male or 2: female | “Weight out of range for gender” | .O: Out of range | F   |
| 3      | .: Missing | “Weight within range for either gender” or .: missing | Stands as original value |     |
| 4      | .: Missing | “Weight out of range for either gender” | .O: Out of range | F   |

* Indication of backward coding (B) or forward coding (F).

Definition of “Weight within range for gender” in Coding Table for Note 23_WT:
From 2006 NHIS, weight for men is 126-299 pounds, weight for woman is 100-274 pounds.

Definition of “Weight out of range for gender” in Coding Table for Note 23_WT:
Any height outside the definition of “Weight within range for gender”.

Definition of “Weight within range for either gender” in Coding Table for Note 23_WT:
Use lowest and highest weight from either gender to set range: 100-299 pounds.

Definition of “Weight out of range for either gender” in Coding Table for Note 23_WT:
Any height outside the definition of “Weight within range for either gender”.

**Coding Table for Note 24:**

**H19073, H19073A-H19073E**

| N24 | H19073A is: | H19073B is: | H19073C is: | H19073D is: | H19073E is: | H19073 is coded as: | H19073A-E are coded as: | *

APPENDIX E

TECHNICAL DESCRIPTION OF THE 2019 TRICARE BENEFICIARY REPORTS
THIS PAGE HAS BEEN LEFT BLANK FOR DOUBLE-SIDED COPYING.
The beneficiary reports present 11 scores for each region and catchment area in the MHS and for the MHS overall. Scores will enable users to compare providers to national benchmarks in these areas: getting needed care; getting care quickly; how well doctors communicate; customer service; claims processing; rating of the health plan, health care, personal doctor, and specialist; preventive care standards; and health behavior. These scores are made up of three different types, described in Table E.1: CAHPS composites, ratings, and DHA standard composites. A trend page compares composites and ratings with values from previous quarters, calculates a quarterly trend, and tests the trend for statistical significance in the quarterly version of the beneficiary reports. In the annual version, results from 3 years are presented.

**TABLE E.1**

CONTENT OF THE 2019 TRICARE BENEFICIARY REPORTS

<table>
<thead>
<tr>
<th>CAHPS COMPOSITES</th>
</tr>
</thead>
<tbody>
<tr>
<td>The CAHPS composites group together survey responses to a set of related HCSDB questions taken from CAHPS. Scores expressed as CAHPS composites profile TRICARE beneficiaries’ satisfaction with their ability to get needed care, the speed with which they receive care, interactions with their doctor, their experience with customer service representatives, and their experience with claims processing. Scores are presented in relation to national benchmarks.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>SATISFACTION RATINGS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Scores expressed as ratings reflect beneficiaries’ self-rated satisfaction with their health plan, health care, and personal providers. The scores, adjusted for patient age and health status, are presented relative to national benchmarks.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>DHA STANDARD COMPOSITES</th>
</tr>
</thead>
<tbody>
<tr>
<td>Two DHA standard composite scores are reported. One score is based on how the preventive care that beneficiaries received compares with Healthy People 2020 standards. Preventive care indicators to be combined are prenatal care, hypertension screening, mammography, and Pap smears. Another composite combines a non-smoking rate, the rate at which smokers are counseled to quit, and rate of non-obese BMI ratio.</td>
</tr>
</tbody>
</table>

Table E.2 lists the questions and response choices for the CAHPS 5.0 composites in the beneficiary reports. Question numbers refer to the CAHPS 5.0 Adult Questionnaire (Commercial). Response choices for each question within a composite are collapsed into three-item scales so that all composites have the same range. Along with the composites, mean responses to each question are presented and compared to national civilian benchmarks.

Four scores are based on respondents’ ratings of health care and health care providers: health plan, health care, personal doctor, and specialist. These ratings are measures of overall beneficiary satisfaction. Questions about these aspects of care request beneficiaries to rate their health plan, health care, and physicians on a scale of 0 to 10, with 0 being the worst and 10 being the best. The rating score will be the mean. For the purpose of presentation, the means are multiplied by 100 so that the scores are presented on a scale of 0 to 100.
### TABLE E.2
CAHPS 5.0 QUESTIONS AND RESPONSE CHOICES
EXPRESSED AS COMPOSITE SCORES AND RATINGS

<table>

</table>

The preventive care composite in the beneficiary reports measures MHS performance in terms of meeting DHA’s goals for the provision of preventive services. The composite is calculated by combining the responses to individual questions pertaining to these goals. Questions and responses from the present version of the 2019 HCSDB that are incorporated into the preventive care composite are presented in Table E.3. When individual scores in the preventive care composite are combined, the resulting composite is weighted by the number of questions to which a normal population has responded. Therefore, the weight a particular question receives in the composite score is based on the number of responses it “receives”. The resulting proportion is presented as a percentage.
TABLE E.3
QUESTIONS AND RESPONSE CHOICES ON PREVENTIVE CARE
EXPRESSED AS A STANDARD DHA COMPOSITE

<table>
<thead>
<tr>
<th>2019 ADULT HCSDB</th>
<th>COMPOSITE PREVENTIVE CARE</th>
<th>RESPONSE CHOICES</th>
</tr>

</table>
| H19049           | When did you last have a blood pressure reading? | Less than 12 months ago  
|                  |                           | 1 to 2 years ago    |
|                  |                           | More than 2 years ago |
| H19050           | Do you know if your blood pressure is too high? | Yes, it is too high  
|                  |                           | No, it is not too high |
|                  |                           | Don't know |
| H19059B          | When did you last have a Pap smear test?        | Within the last 12 months  
|                  |                           | 1 to 2 years ago        |
|                  |                           | More than 2 but less than 3 years ago  
|                  |                           | More than 3 but less than 5 years ago  
|                  |                           | 5 or more years ago      |
|                  |                           | Never had a Pap smear |
| H19061           | When was the last time your breasts were checked by mammography? | Within the last 12 months  
|                  |                           | 1 to 2 years ago        |
|                  |                           | More than 2 but less than 3 years ago  
|                  |                           | More than 3 but less than 5 years ago  
|                  |                           | 5 or more years ago      |
|                  |                           | Never had a mammogram |
| H19064           | In which trimester did you first receive prenatal care? | First trimester  
|                  |                           | Second trimester        |
|                  |                           | Third trimester         |
|                  |                           | Did not receive prenatal care |
| H19071F, H19071I | How tall are you without your shoes on?         | __________ feet  
|                  | Please give your answer in feet and inches.     | __________ inches |
| H19072           | How much do you weigh without your shoes on?    | __________ pounds |

The healthy behavior composite measures the success of DHA's efforts to reduce smoking and obesity rates. The composite consists of a non-smoking rate, which is the proportion of adults not smoking or who quit more than a year ago, the counseled to quit rate, which is the proportion of smokers with office visits who were counseled to quit during at least one visit, and the rate of adults with non-obese BMI ratio. The composite weights these three measures equally.

F.1 - Q3FY2019/PROGRAMS/WEIGHTING/MERGESYN.SAS - Combine Item Response Data from survey contractor with the MPR sampling and DEERS variables

******************************************************************************
* PROGRAM: Changed from MERGENRC.SAS to MERGESYN.SAS
* TASK: QUARTERLY DOD HEALTH CARE SURVEY ANALYSIS (6077-300)
* PURPOSE: COMBINE ITEM RESPONSE DATA FROM IPSOS WITH THE MPR SAMPLING AND DEERS VARIABLES.
* WRITTEN: 01/31/2001 BY KEITH RATHBUN
* MODIFIED: 06/12/2012 BY JACQUELINE AGUFA: Add code to modify the observations of the file from Synovate
  This process will reincorporate the overlapped cases (currently missing in the synovate file)
  back to the mergsyn file. The missing overlapped cases can be found in bwt.sas7bdat or sampla02.sas7bdat
  02/02/2016 BY MTURBYFILL Add VARNUM to PROC CONTENTS
  03/30/2013 BY MTURBYFILL Add label for SURVTYPE
  02/10/2017 BY MTURBYFILL Changed filepaths and capitalization to match SAS Grid.
  05/22/2018 BY ICONNOR Removed H18074-79 variables from the dataset since they're not being used
* INPUTS: 1) DODyyQnF.sas7bdat - Quarterly DOD Health Survey Data from IPSOS
  where n = Quarter Number
  yy = Survey Administration Year
  2) BWT.sas7bdat - MPR Sampling and DEERS variables
  3) EXTRACT.sas7bdat - DEERS variables
* OUTPUTS: 1) MERGESYN.sas7bdat - Quarterly DOD Health Survey Data
  (Combined IPSOS, MPR, and DEERS variables)

F.2.A - Q1FY2019\PROGRAMS\CODINGSHEME\CSCHM19Q.SAS - Implement Coding Scheme and Coding Tables for Quarter 1 FY2019

*****************************************************************************
**;
* Program: Cschmyyq.sas
* Written: 06/04/2001
* Author: C. Rankin
* 
* Input: MERGESYN.sas7bdat - Merged MPR Sampling, DEERS, and Synovate Response Data
* Output: CSCHMyyQ.sas7bdat - Coding scheme file
* 
* Modified:
* 12/15/2012 - Removed logic for handling check boxes for height and weight variables. Also no longer have to convert the weight variable from character to numeric
* 12/21/2012 - Added code on line 146 to correct out of range height (in)
* 12/18/2013 - Updated for Q1 2014 - added ht/wt note
* 09/29/2014 - Added SQL statement to automatically make varlist1, varlist2, and marked variables
* 07/22/2015 - NOPRINT added to first PROC SQL
* 02/02/2016 BY MTURBYFILL Add VARNUM to PROC CONTENTS
* 04/29/2016 - Added recoding for H16003, should be used only for 2016Q2.
* 02/10/2017 - Changed filepaths and capitalization to match SAS Grid.
* Removed additional female-specific fields from notes 19A and 19B.
* 04/21/2017 - H__032 is removed for the foreseeable future.
* 04/05/2018 - Notes 10_B1, 22, 23, and 25 are removed
* 
* Purpose: Apply Coding Scheme Specifications to DoD Health Care Survey Response Data, check for consistency in responses and skip patterns
* Include files: Cschmyyq.fmt
* 
*****************************************************************************

Which health plan will you use for 2019:
- TRICARE Prime
- TRICARE Select
- Veterans Administration (VA)
- Federal Employee Health Benefits Plan (FEHBP)
- Medicare and TRICARE for Life
- Medicaid
- Other civilian insurance coverage
- Space available care at a military facility
- Don't know
- No insurance coverage

;
F.2.C - Q2FY2019\PROGRAMS\CODINGSCHEME\CSCHM19Q.SAS - Implement Coding Scheme and Coding Tables for Quarter 2 FY2019

**************************************************************************
**;
* Program: Cschmyyq.sas
* Written: 06/04/2001
* Author: C. Rankin
*
*     Input: MERGESYN.sas7bdat - Merged MPR Sampling, DEERS, and Synovate Response Data
*     Output: CSCHMyyQ.sas7bdat - Coding scheme file
*
* Modified:
*     12/15/2012 - Removed logic for handling check boxes for height and weight variables. Also no longer have to convert the weight variable from character to numeric
*     12/21/2012 - Added code on line 146 to correct out of range height (in)
*     12/18/2013 - Updated for Q1 2014 - added ht/wt note
*     09/29/2014 - Added SQL statement to automatically make varlist1, varlist2, and marked variables
*     07/22/2015 - NOPRINT added to first PROC SQL
*     02/02/2016 BY MTURBYFILL Add VARNUM to PROC CONTENTS
*     04/29/2016 - Added recoding for H16003, should be used only for 2016Q2.
*     02/10/2017 - Changed filepaths and capitalization to match SAS Grid.
*       Removed additional female-specific fields from notes 19A and 19B.
*     04/21/2017 - H__032 is removed for the foreseeable future.
*     04/05/2018 - Notes 10_B1, 22, 23, and 25 are removed
*
* Purpose: Apply Coding Scheme Specifications to DoD Health Care Survey Response Data, check for consistency in responses and skip patterns
* Include files: Cschmyyq.fmt
*

**;  
* Program: Cschmyyq.sas  
* Written: 06/04/2001  
* Author: C. Rankin  
*  
* Input: MERGESYN.sas7bdat - Merged MPR Sampling, DEERS, and Synovate Response Data  
* Output: CSCHMyyQ.sas7bdat - Coding scheme file  
*  
* Modified:  
* 12/15/2012 - Removed logic for handling check boxes for height and weight variables. Also no longer have to convert the weight variable from character to numeric  
* 12/21/2012 - Added code on line 146 to correct out of range height (in)  
* 12/18/2013 - Updated for Q1 2014 - added ht/wt note  
* 09/29/2014 - Added SQL statement to automatically make varlist1, varlist2, and marked variables  
* 07/22/2015 - NOPRINT added to first PROC SQL  
* 02/02/2016 BY MTURBYFILL Add VARNUM to PROC CONTENTS  
* 04/29/2016 - Added recoding for H16003, should be used only for 2016Q2.  
* 02/10/2017 - Changed filepaths and capitalization to match SAS Grid.  
* 04/21/2017 - Removed additional female-specific fields from notes 19A and 19B.  
* 04/21/2017 - H__032 is removed for the foreseeable future.  
* 04/05/2018 - Notes 10_B1, 22, 23, and 25 are removed  
*  
* Purpose: Apply Coding Scheme Specifications to DoD Health Care Survey Response Data, check for consistency in responses and skip patterns  
* Include files: Cschmyyq.fmt  
*

/*We also need to redefine xins_cov, call it xins_rsv,
which is the same as xins_cov but where
reservists are separated from other active duty - xins_cov will =1 if active
duty, but not active reservist or inactive reservist.

Similarly we need xenr_rsv which is xenr_pcm but reservists will not be
 treated as active duty
 ie xenr_pcm=1 if active duty but not reservist. We also need to define
another category
 for xins_rsv, xins_rsv=9 for tricare reserve select -we also need to account
for the value
covered by insurance of another country - that should be classified as
civilian insurance.
Use H&YR.003 for this.*/

F.4.D - Q3FY2019/PROGRAMS/CONSTRUCT/CONSVAR0.SAS - Include file for Convarq.sas

*****************************************************************************
* PROGRAM:  CONSVAR0.SAS
* TASK:     1999 DOD HEALTH CARE SURVEY ANALYSIS (8676-100)
* PURPOSE:  Create XREGION and CONUS
* WRITTEN:  February 11, 2000
* MODIFIED: 04/10/2019 - M Turbyfill - Added DCATCH 0994 to XREGION 7
* for the shift of parts of West Texes to the West Region.
* Hardcoded one obs in 2019Q1
* 08/01/2019 - M Turbyfill - Added CACSMPL values to XREGION
* attribution:
* 5185
* 5199
* 0783
* 5187
* 5189
* 0799
* 0625
* 6923
* 6924
* Redefined missing XREGION and added XREGION values 17 and 18
* Made appropriate adjustments to USA and XTNEXREG
* NOTES: 1) This file needs to be included in the CONVARQ.SAS program.
*****************************************************************************
* Assign XREGION using CACSMPL

               02/07/2019 by MTurbyfill XTNEXRG2, DELGRNRC, and DENRGRPC added to dataset
               ACV removed from dataset
               JSFLAG replaced by DHAFLAG
               H19005 returns to the dataset
               08/01/2019 by IConnor DELGRNRC and DENRGRPC removed from dataset
* PURPOSE:     TO MERGE FINAL FILES TOGETHER AND REORDER BY VARIABLE TYPE
               To reorder variables within the record use a LENGTH statement before the SET statement.
               Make sure that MPRID is the first variable in the record followed by:
               1) other sampling variables
               2) DEERS variables
               3) Post-stratification vars
               4) questionnaire responses
               5) DRC variables
               6) recoded questionnaire responses
               3) coding scheme flags
               8) constructed variables
               9) weights (NOT AVAILABLE FOR PRELIMINARY DATA)

Define the data sets and create the variables

******************************************************************************
*******************
*** Program: smplA1A2.sas
*** Task     : (50713.BY.T02.013.200)
*** Purpose: Define the data sets and construct the variables to be used in
the propensity model
***
*** Written: Haixia Xu 12/18/2006 for Q1FY2007 Weighting
***
*** Inputs:  extract.sas7bdat : Extract file
***          selectq.sas7bdat : Survey file with CAHPS4.0 questionnaires
***          deers001-004.sas7bat
***          Sample_revised.sas7bdat
*** Outputs: smplA1A2.sas7bdat
***          smplA1.sas7bdat: Dataset to be used to calculate the unknown
eligibility factor A1
***          smplA2.sas7bdat: Dataset to be used to calculate the
nonresponse adjustment A2
***          conusA1.sas7bdat, oconusA1.sas7bdat, conusA2.sas7bdat,
oconusA2.sas7bdat
***
*** Note: 1) Modified for Q1FY2007 weighting:
***        a) Two more variables are added in CHAID tree analysis to
capture the new
***        b) Uncollapse PCM to differentiate CIV and MTF.
*** 2) Modified for Q1FY2009 weighting:
***        a) Email notification sent to all Active duty whose email
address is available
***        Looks like the variable name in Answer Tree has to be no
longer than 8.
***        b) Define patc_grp based on patcat & Has_email, it has 4
categories instead of 3.
*** 3) Q1FY2012 had 42 overlap with TSS 2011. We dropped 42 cases
from sample.
***        For weighting purpose, we need to make there status as Non-
Respondense.
*** 4) Q2FY2012 We do not create data 'sampla03_2' and 'Has-Email'
variable any more.
*** 5) Q1FY2014: Starting from Q1FY2014, Sample Size increased to
100,000 and it's WebOnly
*** 6) Q3FY2019: During Q3 Sampling, we collapsed (N+S)=E in Frame
and updated Stratum and Com_Geo
***        accordingly. But we also need to update Stratum and Com_Geo
again for WEST TX cases.
***        B4smplA1A2_frame_sample_revised.sas updating Stratum and
Com_Geo again for WEST TX and
***        creating TNEX_GRP for modeling

F.151
F.7.A - Q3FY2019\Programs\Weighting\NewWeights\logmdA1.SAS - Predict the response propensity score for the unknown eligibility adjustment

******************************************************************************
**************************
*** Program: logmdA1.sas (50713.BY.T02.013.200)
*** Purpose: Use the SUDAAN model to predict the response propensity score for the unknown eligibility adjustment step
*** Inputs : conusA1.sas7bdat, oconusA1.sas7bdat, smplA1A2.sas7bdat
*** Outputs: logmdA1.sas7bdat
***
*** Written: Haixia Xu 12/27/2006 Q4fy2007 weighting
***
*** Note : 1) We need to carefully check log for Sudaan Warning and review to make sure it's not falls warning (Sudaan Bug we identified couple of years ago). If we notice Singularity warning, we need to check how to avoid it.
*** See note: L:\Q4FY2010\Programs\Weighting\NewWeights\SUDAAN Warning_Proc RLOGIST.msg
***
*** 2) Starting from Q3FY2011:
*** a) Active duty 'with and without' email has been collapsed, since these cases are involved in so many zero cell.
*** b) has_email is no longer used in the model since most of the time it is not included
*** See note: L:\Q3FY2011\Programs\Weighting\NewWeights\ImportantNote_PleaseCheck
***
*** 3) Starting from Q1FY2015, instead of 3-level interactions, we will use 2-level (Dept=2 option) for Chaid AnswerTree.
***
*** 4) Starting from Q3FY2015, using /NORM option in SAS Stepwise. Otherwise standard errors will be way too small.
***
*** 5) Starting from Q3FY2015, we selected a sample from Non-Respondent for a paper followup. Only 'CONUS and non-AD' non-respondents are eligible for paper survey.
*** We created three flag variables to use in model: Flag_NR, Flag_NADD, Flag_ADFM
*** Flag_NR is main effect and (Flag_NADD and Flag_ADFM) are interactions here.
***
*** 6) Starting from Q2FY2016t, we decided to use all decisions we took in regular quarter for the corresponding Trickle Quarter. We historically noticed, with few hundred extra responses decisions hardly change in trickle quarter than regular quarter, so we want to keep code as is to reduce extra afford.
7) We decided to always collapse AgeGroup='5'(age65+) with AgeGroup='4' for both CONUS and OCONUS since it always causes problems (zerocell, smallcell, singularity warning)

8) Review for updates and Update Common Weighting README file with suggestions, QA Comments

N:\Project\40309_HCS\DC1\HCSDB\README_File_For_HCSDB_Weighting.txt
(you may find a shortcut in individual qtr folder)

9) Starting from Q2FY2017, creating 4-level Age Group instead of 5-level, since it always causes problems.

10) Q1FY2019: Eric suggested to drop FLAG_NR, FLAG_NADD, FLAG_ADFM variables from SAS Model.

The way these variables are constructed, Eric thinks they are not related to outcome so we should not use in models.

F.8 - Q3FY2019\Programs\Weighting\NewWeights\adjwt1.SAS - Calculate the unknown eligibility
adjusted weight
dm 'clear output;clear log';
****************************************************************************
********************
*** Program : Adjwt1.sas
*** Task
: 50713.BY.T02.013.200.
*** Purpose : Create the weighting class cells based on the propensity from
***
the unknown eligibility modeling
***
Calculate the unknown eligibility adjusted weight
*** Inputs : logmdA1.sas7bdat, frame309.41Ha.sas7bat
*** Outputs : adjwt1.sas7bdat
*** Modified: Sabrina R. for GRID Testing with Q3FY2016
***
*** Note:
*** From Q1Fy2014, our sample size increased from 50k to 100k. It is now
web only and RR dropped.
*** For low RR, A1 is too large using the usual 10 cells and 5cells. So now
we are trying following
*** three different approaches:
*** - Create 5 CONUS and 4 OCONUS weighting class
*** - Create 5 CONUS and 4 OCONUS then collapsing if necessary (usually
combine first 2 CONUS and
***
OCONUS to create 4 CONUS and 3 OCONUS).
*** - Create fewer Strata (4 CONUS and 3 OCONUS) instead of collapsing
***
After looking at the A1 for each of the 3 scenarios, we take the
final collapsing decision
*** - In this program, we created 5 CONUS and 4 OCONUS then collapsed
***
*** Starting from Q2FY2016t, we decided to use all decisions we took in
regular quarter to the
*** corresponding Trickle Quarter. We historically noticed, with few
hundred extra responses
*** decisions hardly change in trickle quarter than regular quarter, so we
want to keep code as
*** is to reduce extra afford.

****************************************************************************
*************************
*** Program: postwt.sas
*** Task
: 50713.BY.T02.013.200
*** Purpose: Do the poststratification to force weighted counts to
population counts in certain domain.
*** Inputs : framea_revised.sas7bdat: the frame file
***
adjwtp_revised.sas7bdat: weighted survey data
*** Outputs: postwt.sas7bdat: final weight data after poststratification
*** Written: Haixia Xu on 12/27/2006
*** Note:
1) From Q1FY2011, we will create POSTCELL from Sampling
***
'Stratum'instead of (Group||Comgeo)
***
ie., Postcell=substr(Stratum,1,5)
***
2) Starting from Q1Fy2014, SampleSize Increased to 100,000
***
and it's WebOnly for all

Name: design_effects_unequal_weights

Purpose:
Calculate the design effects due to unequal weights. Creates two data sets. One data set contains the overall design effect and the information used to calculate the design effect. The other data set contains the design effects for each category of the analysis variable and the information used to calculate these design effects. In the two data sets, the additional information refers to the number of observations, the sum of the squared weights, and the sum of the weights squared.

Programmer:
Darryl V. Creel

Parameters:
There are five:

(1) in_data_set - The input data set.

(2) analysis_variable - The analysis variable contains the categories by which the design effects are calculated.

(3) weight_variable - The weight variable.

(4) out_overall_data_set - Name of the data set that contains the overall design effect.

(5) out_data_set - Name of the output data set that contains the design effects for each category of the analysis variable.

Output:
There are two data sets:

(1) A data set that contains the overall design effect and the information used to calculate the overall design effect. It includes observations that have a missing value for the analysis variable. This data set is named by the out_overall_data_set parameter.

(2) A data set that contains the design effects for each category of the analysis variable and the information used to calculate these design effects. There is one observation for each category of the analysis variable, including a missing category, if there are missing values for the analysis variable. This data set is
named by the `out_data_set` parameter.

Side Effects:
None

Notes:

(1) Use with SAS V8.

(2) Do NOT use the following variable names as parameters:
   (a) `_weight_variables`
   (b) `_overall_design_effect`
   (c) `_design_effect`.

```sas

%mend design_effects_unequal_weights;
**Program: Trim.sas**

**Inputs:** postwt.sas7bdat - post weight data

**Outputs:** trimmed.sas7bdat

**Written:** 1) Sky Andrecheck 6/07

**Updated:**
1) H. Xu on 03/29/2007 for q3fy2007 weightting
2) Sabrina Rahman on 06/25/2008 for q3fy2008 weightting
   (last macro minmax is new for q3fy2008 to produce some tables we need to take trimmin decision)
3) Sabrina Rahman on 09/26/2008 for q4fy2008 weightting
4) S. Rahman on 09/21/2011 for Q4FY2011 Adult Weighting
   Trimmed 2 times with postcell and then patcat, this is a different order then the original trim.sas program
   See "trimming decision" note in folder L:\Q4FY2011\Programs\Weighting\NewWeights\checking
5) Sabrina R. 06/26/2012: Similar to Q1FY2012 and Q4FY2011
   we are trimming ONCE in Q3FY2012 using PATCAT. Trimming by Postcell do not do much, using enbgsmpl have max weight over 10,000. Trimming once by PATCAT seems our best option.
6) Starting in Q2FY2016, included DBENCAT design effects
7) Q1FY2017: Instead of "cutoff=means+stdev*6" we are using "cutoff=means+stdev*4" to avoid large DE (4+).
   Also, trim Domain "TNEXREG" looks better than PATCAT. so we are using TNEXREG as our final Trimming Domain.
8) Starting in Q2FY2016, included DBENCAT design effects
9) Added Macro Variable for Final Trim Weight and Domain
10) Added a Trimming Summary table

**Purpose:** Trim the Large Adjusted Weights by One or More of Domains: Postcell, Enbgsmpl, Patcat, Tnexreg, PCM and Servaff

**Task No:** 50713.BY.T02.013.200

**Project:** Health Care Survey of DoD Beneficiaries - Adult

**Folder:** F.12 - Q3FY2019\Programs\Weighting\NewWeights\trim.sas

F.13 - Q3FY2019\Programs\Weighting\NewWeights\postwt_trimmed.sas - Do the
poststratification again after trimming
****************************************************************************
**
*** Project: Health Care Survey of DoD Beneficiaries - Adult
*** Purpose: Do the poststratification again after trimming
***
force weighted counts to population counts in certain domain.
*** Task no: 50713.BY.T02.013.200
*** Program: Postwt_trimmed.sas
***
*** Inputs: framea_revised.sas7bdat: the revised frame file
***
trimmed.sas7bdat - trimmed survey data
*** Outputs: postwt_trimmed.sas7bdat: final weight data after
poststratification
*** Written: 1) Haixia Xu on 12/27/2006
*** Update : 1) Starting in Q2FY2016, included DBENCAT design effects
***
2) Q2FY2019: B4smplA1A2_sample_revised.sas created _revised
***
version of framea data with updated Stratum and com_Geo
***
for some WEST TX cases. We will use this updatef frame.

F.18.A - WEIGHTING\COMB2019.SAS - Combine quarterly datasets into one annual file - Annual

*****************************************************************************
* PROGRAM:  COMB2019.SAS
* TASK:     ANNUAL DOD HEALTH CARE SURVEY ANALYSIS (6244-300)
* PURPOSE:  Combine quarterly datasets into one annual file.
* WRITTEN: 12/23/2002  BY KEITH RATHBUN.
*
* INPUTS: 1) HCSyyq_2.sas7bdat - Q1-Q4 DOD HCS Analysis files
                      Where yy = Year (11)
                      q = Quarter Number (1-4)
*
* MODIFIED: 1) September 17, 2009 by Emma Ernst for 2009 database
               2) October 12, 2010 by Mike Rudacille for 2010 database
                  Switched from HCSyyq_1 to HCSyyq_2, as some of the necessary
                  variables are now only available in the restricted use dataset
               3) September 23, 2011 by Mike Rudacille for 2011 database
               4) September 20, 2012 by Amanda Kudis for 2012 database
               5) July 24, 2013 by Amanda Kudis for 2013 datasets
               6) June 02, 2014 by Amanda Kudis for 2014 datasets
               7) July 21, 2015 by Matt Turbyfill for 2015 datasets
               8) July 21, 2016 by Matt Turbyfill for 2016 datasets
               9) June 15, 2018 by Matt Turbyfill for 2018 datasets
*
* OUTPUT: 1) COMB2015.sas7bdat - Combined quarterly datasets in one annual file
*
* NOTES: 1) The output dataset produced by this program contains all
         of the original quarterly responses plus additional
         responses that "trickled" in after the end of the
         fielding period. The variable called QUARTER can be used
         to identify which version of the quarterly survey is
         applicable to the respondent.
*
* INCLUDES: 1) XCATCH.INC - Create catchment reporting variable
*
*****************************************************************************

F.19 - WEIGHTING\ADDWGTS.SAS - Merge the combined annual weights with the final questionnaire/sample file - Annual

*****************************************************************************
* PROGRAM:  ADDWGTS.SAS
* TASK:     DOD HEALTH CARE SURVEY ANALYSIS (6244-300)
* PURPOSE:  MERGE THE FINAL WEIGHTS FILE WITH THE FINAL
*           QUESTIONNAIRE/SAMPLE FILE
* *  WRIITEN:  02/02/2001 BY KEITH RATHBUN
* *  MODIFIED: 1) 01/15/2002 BY KEITH RATHBUN: Updated to combine all quarterly
*               datasets including trickles with the annual weights file.
*               2) 12/30/2002 BY KEITH RATHBUN: Updated for 2002 survey.
*               3) 01/20/2004 BY LUCY LU: Updated for 2003 survey.
*               4) 01/20/2004 BY KEITH RATHBUN: Added catchment reporting
*      (XCATCH) constructed in STEP1Q.
*               5) 03/03/05 BY LUCY LU: Updated for 2004 annual survey.
*               -- Create macro variables and eliminate macro program,
*               -- update the length statement for year 2004.
*               6) 01/04/2006 BY KEITH RATHBUN: Updated for 2005 survey.
*               Modified to produce both public and private use datasets.
*          11) 09/20/2012 by AMANDA KUDIS: Updated for 2012 survey.
*          12) 07/24/13 BY AMANDA KUDIS: Updates for 2013 survey.
*          13) 07/11/17 BY MATT TURBYFILL: Updates for 2017 survey.
*          14) 06/27/18 BY MATT TURBYFILL: Updates for 2018 survey.
*                 Removed HEDIS-only fields.
*          15) 06/29/18 BY IRNA MAY CONNOR: ADDED 5_BI1-4 notes in length
*               statement.
*          16) 07/05/2018 BY IRNA MAY CONNOR: REMOVED STRATUMO and commented
*               out
*               AA AB AC AD AE AF DCW_ID DHP_CODE ALLCOUNT GEOCELLH in line
*               71
*          17) 07/06/2018 BY IRNA MAY CONNOR: REMOVED SELECTIONPROB_ALL
*               STRATUM_H STRATUM_4 FLAG_COMGEO_STRATUM4_SAME
*               FLAG_LIST_OF_53 FROM FINAL DATASET
* *  INPUTS:  1) CREPWT.sas7bdat  - Final/Replicated Weights file - FORM A
*               2) COMB2014.sas7bdat - Combined Q1-Q3 FORM A
* Questionnaire/Sample File *AMK NO Q4 FOR 2014;
* *  OUTPUTS:  1) HCSyyA_n.sas7bdat - Final FORM A Questionnaire/Sample File
*               combined with Final/Replicated Weights file - FORM A
*               where  yy = Year
*               A = Form A - Annual
*               n = Final Dataset Suffix/Version Number
* *  2) HCSyyA_n.XPT - Final Adult SAS XPORT Dataset
*               where  yy = Year
*               A = Form A - Annual
*               n = Final Dataset Suffix/Version Number

F.347
* NOTES: 1) This program combines all of the quarterly input datasets including trickles with the annual weights file.

F.20 - Q3FY2019\PROGRAMS\HCSDB_Database_BatchProgram.SAS - Run all database creation programs as a single process

*------------------------------------------------------------------
Program: HCSDB_Database_BatchProgram.sas
Programmer: Amanda Kudis
Date: 9/26/14

Notes: The following changes must still be made within the programs each quarter.
1) Macro variables in this program updated
2) Format library - Updated with new formats
3) MergeSyn - No updates
4) CschmYRq.sas
   a) Program name with new YR
   b) New note logic added, old note logic removed
5) CschmYRq.fmt
   a) Program name with new YR
   b) New variable formats and labels added, old removed
6) SelectQ.sas
   a) Overlap_fnstatus.inc(called in selectq.sas) - Verify which TSS data each quarter overlaps with and update file. If there is no selectq to compare to, but there are overlap cases then updated NOSELECTQ (below) to Y.
7) Convarq.sas - No updates
8) Mergeq.sas - Add new/remove old variables to length statement
9) Addwgtsa.sas - No updates
10) Database_QA.sas - Update note frequencies to match variables in the coding scheme document.

F.21.A - Response_Rate\ANNUAL_RR.SAS - Combine Q1-Q3 and annual Response Rates into one excel file

******************************************************************************
* PROGRAM: ANNUAL_RR.SAS
* TASK: DOD HEALTH CARE SURVEY ANALYSIS (50713.BY.T02.013.200)
* PURPOSE: Combine Q1-Q3 and Annual Response_Rates.xls files
* into one file called Response_Rates_Annual.xls.
* WRITTEN: 03/15/2005 BY KEITH RATHBUN
*
* MODIFIED:
*
* INPUT: 1) RESPONSE_RATES.XLS files (Q1-Q3 and Annual)
*          2) EMPTY_ANNUAL.XLS file (empty template)
*
* OUTPUT: 1) RESPONSE_RATES_ANNUAL.XLS
*
* INCLUDES: None
*
* NOTES:
*
* 1) This program must be run in BATCH mode. DO NOT modify the directory
*    references to be hard-wired to support interactive use.
* 2) For FY2012, dropping HAS_EMAIL
* 3) From FY2013: We donot receiving any Q3t and Q4 Weights. Annual Wt and
*    RR are calculated using Q1t, Q2t and Q3 quarters.
* 4) We need to run programs in order of table02.sas, annual_rr.sas.
* 5) For FY2017, using Combining HCSDB and HEDIS for all domain except
*    CASSmpl

F.21.B - Response_Rate\TABLE02.SAS - Calculate the annual Response Rates

***************************************************************************
* PROGRAM: TABLE02.SAS  
* TASK: DOD HEALTH CARE SURVEY ANALYSIS (50713.BY.T02.013.020)  
* PURPOSE: BUILD TABLE 2: RESPONSE RATES BY DOMAIN FOR (HCSDB+HEDIS) COMBINE FILE  
* WRITTEN: 11/09/1999 BY KEITH RATHBUN  
*  
* MODIFIED:  
* 1) 12/14/2000, Keith Rathbun - Added printing of weighted (WN) and unweighted (SN) population sizes. Also, Update for quarterly survey to use BWT instead of BWT99 (generalized variable name for ease of maintenance).  
* 2) 02/01/2001, Keith Rathbun - Added the PERIOD parameter.  
* 3) 01/30/2002, Esther Friedman - added nested macro so it would run for all 4 quarters trickle files.  
* 4) 11/16/2004, Haixia Xu for Q3, 2004 RR  
*   - Changed FNSTATUS from 30 to 31, SN3->SN31, WN3->WN31  
*   - Use MERGEQ.SD2 as the input data  
*   - Produce the RR for servaff and xtnexreg  
* 5) 01/18/2005, Keith Rathbun - Added CREATXLS macro.  
*  
* LAST UPDATED:  
* 6/28/2018, Sabrina R.- Updated for 2018 Annual RR  
*  
* INPUT:  
* 1) MERGEQ.sas7bdat (All quarters)  
*  
* INCLUDES:  
* 1) TABLE02.IN1  
* 2) TABLE02.IN2  
*  
* NOTES:  
*  
* 1) This program must be run in BATCH mode. DO NOT modify the directory references to be hard-wired to support interactive use.  
* 2) If you add a new domain combination, you will need to update the EMPTY.XLS file to have a new sheet with the same name as the domain variable(s) combination.  
* 3) We need to run programs in order of table02.sas, annual_rr.sas.  
* 4) We can run table02_xcatch.sas anytime at this point, since it is independent from other two above.  
* 5) In FY2017, we will calculated a combine (HCSDB+HEDIS) RR for all except 'cacsml'.  
* We will calculate RR for 'cacsml' using combine HCSDB and 'GEOCELLH' for HEDIS only  
* 6) In FY2018 final file, the HEDIS part of BWT is weighted up to zone4 instead of all four zone. Checked with Eric/Nancy and as sugested we fixed the isssse in HEDIS postwt.  
* For detail, see the readme note. So BWT is not accurate in final file for HEDIS part.  
* 7) In FY2019: Combining HCSDB Quarters only (NO HEDIS for 2019).  
* Adding DHAFLAG and xtnexrg2(EAST and WEST), Dropping JSFLAG and xtnexreg

**PROGRAM: TABLE02.IN1**  
**TASK: 2002 DOD HEALTH CARE SURVEY ANALYSIS**  
**PURPOSE: COMMON CODE INCLUDE FILE USED TO BUILD**  
**TABLE 2: RESPONSE RATES BY DOMAIN SUMMARY**  
**2002 DOD HEALTH CARE SURVEY FILE.**  
**WRITTEN: 01/08/99 BY KEITH RATHBUN**  

**MODIFIED:**  
1) 5/17/1999, Keith Rathbun - Removed printing of the final location rate (FLR) and final completion rate (FCR).  
2) 7/07/1999, Keith Rathbun - Added back printing of FLR  
3) 12/14/2000, Keith Rathbun - Update for quarterly survey to use BWT instead of BWT99 (generalized variable name for ease of maintenance).  
4) 11/16/2004 by Haixia Xu - Update the coding of FNSTATUS from 30 to 31.  
   - SN3->SN31, WN3->WN31  
5) 01/24/2005 by Keith Rathbun - Update PUT statements to accommodate up to 3 CHAR*40 domains.

* PROGRAM: TABLE02.IN2
* TASK:    QUARTERLY DOD HEALTH CARE SURVEY ANALYSIS
* PURPOSE: COMMON CODE INCLUDE FILE USED TO BUILD
*     TABLE 2: RESPONSE RATES BY DOMAIN SUMMARY
*     QUARTERLY DOD HEALTH CARE SURVEY FILE.
* WRITTEN: 01/08/99 BY KEITH RATHBUN
*
* MODIFIED:
* 1) 5/17/1999, Keith Rathbun - Removed printing of the final location rate
*    (FLR) and final completion rate (FCR).
* 2) 7/07/1999, Keith Rathbun - Added back printing of FLR
* 3) 12/14/2000, Keith Rathbun - Added printing of weighted (WN) and
*    unweighted (SN) population sizes.
* 4) 11/17/2004 BY Haixia Xu - Made changes due to the different coding of
*    FNSTATUS:
*        -Rewrite the formula used to calculating FRR1, FRR2
*        -SN3->SN31, WN3->WN31
* 5) 01/24/2005 by Keith Rathbun - Update PUT statements to accomodate up
*    to 3 CHAR*40 domains.
*
******************************************************************************
;
    *Final Response Rate;
    FRR1 = SN11/(SN1 + SN2 + SN4*((SN1 + SN2)/(SN1 + SN2 + SN31))); 
    FRR2 = WN11/(WN1 + WN2 + WN4*((WN1 + WN2)/(WN1 + WN2 + WN31))); 

    *Final Location Rate;

F.21.E - Response_Rate\TABLE02_XCATCH.SAS - Calculate Response Rates by catchment area

***************************************************************************
* PROGRAM: TABLE02_xcatch.SAS
* TASK:    DOD HEALTH CARE SURVEY ANALYSIS (50713.BY.T02.013.200)
* PURPOSE: BUILD TABLE 2: RESPONSE RATES BY DOMAIN SUMMARY
*          Quarterly DOD HEALTH CARE SURVEY FILE.
* WRITTEN: 11/09/1999 BY KEITH RATHBUN
* MODIFIED: H. Xu on 11/21/2008 to produce the annual RR for xcatch
*          S. Ra.on 06/02/2014 to produce the annual RR for xcatch
*          S. Ra.on 07/15/2016 to produce the 2016 annual RR for xcatch
* * INPUT:  1) MERGEQ.SD2 (All quarters)
* * INCLUDES: 1) TABLE02.IN1
*             2) TABLE02.IN2
* 
* NOTES: This program is modified from 325table02.sas in
F:\2004\Programs\Response_Rate
* to produce the RR only for XCATCH
* NOTE : We need to run programs in order of table02.sas, annual_rr.sas.
*        We can run table02_xcatch.sas anytime at this point, since it is
*        independent from other two above.
* NOTE : Check in
N:\Project\50713_HCS\SASGRID\DATA\HCSDB\Q3FY&YR.\Programs\Weighting
* for updated XCATCH.INC file. Also check with Matt to make sure it
* Difference between annual and quarterly version is Path.

SAS CODE FOR STATISTICAL AND WEB SPECIFICATIONS FOR THE 2019 TRICARE BENEFICIARY REPORTS AND PURCHASED CARE BENEFICIARY REPORTS
G.1.A - Q3FY2019\PROGRAMS\ReportCards\CAHPS_AdultQ3FY2019\STEP1Q.SAS - Create and recode variables used in Adult Beneficiary Reports - Run Quarterly

*******************************************************************************
*
* PROJECT:  DoD - Quarterly Adult Report Cards
* PROGRAM:  STEP1Q.SAS
* PURPOSE:  Create Dummy and Recode Variables used in Adult Report Card
  Create a Female dummy variable
  Create an Education dummy variable
  Create 15 region dummies combining regions.
    7 & 8 into region 8. That is, there
    isn't a region 7 dummy.
  Create 7 age dummy variables.
*
* We require the most desired code to be the highest value.
* Recode the dependent variables into:
  1 - the least desirable value
  2 - the 2nd least desirable value
  3 - the most desirable value
  . - missing
*
* Create 7 variables GROUP1 - GROUP7
  IF (XINS_COV IN (1,2,6) AND H10004>=2) THEN GROUP1 = 1
  IF (XENR_PCM IN (1,2,6) AND H10004>=2) THEN GROUP2 = 1
  IF (XENR_PCM = 3,7      AND H10004>=2) THEN GROUP3 = 1
  IF XINS_COV IN (3)                     THEN GROUP4 = 1
    /*JSO 08/24/2006, Deleted 4,5*/
  IF XBNFGRP = 1                         THEN GROUP5 = 1
  IF XBNFGRP = 2                         THEN GROUP6 = 1
  IF XBNFGRP IN (3,4)                    THEN GROUP7 = 1
*  GROUP8 is output for all beneficiaries
*
* MODIFIED:52) November 3, 2012 By Mike Rudacille, Updated for handling of
Joint Service facilities
*  53) December 27, 2012 By Aimee Valenzuela, Update program for
  Q1FY2013.Updated Variable names
     and input dataset.
*  54) March 23, 2013 By Mike Rudacille, Update program for
  Q2FY2013.
*  56) Feb 27, 2013 By Amanda Kudis, now use xservaff from database
*  57) December 1, 2014 by Matt Turbyfill, revised for the Macro
  Program.
*  Changed HCSyyq_2 to &DATAFILE.
*  Changed H14 and R14 to H&FY. And R&FY.
*  Replaced RCTYPE with &PC.ReportCards.
*  Changed CONVERT.SAS to
  ..\..\ReportCards\CAHPS_Adult\Folder.&FYYEAR.\CONVERT.SAS.
*  58) December 27, 2016 by Matt Turbyfill, revised for the SAS
  Grid.
*  Changed OUT filepath to "Data".
*  Changed IN1 filepath to "&DATAPATH."
*  Changed IN2 filepath to "&FMTPATH."
*  Backslashes changed to forward slashes.

G.3
INPUTS: 1) HCSyyq_2 - DoD Quarterly HCS Database

OUTPUTS: 1) GROUP1-8.sas7bdat - DoD Quarterly GROUP files as defined above

INCLUDES: 1) CONVERT.SAS - Convert item responses to proportional values for consistency w/ TOPS

NOTES: 1) Groups 1-3 modified 10/09/2000

2) In Q1_2002, S02S01 was renamed and recoded to H00077 (health status variable for 2000). H02077 was the Hispanic/Latino variable. In Q2_2002, H02077 is health status, and H02079 is the Hispanic/Latino variable. To make the Quarter 2 data file (HSC022_1.sd2) more consistent with the Quarter 1 file, the health status variable which was H02077 is now H04075, and the Hispanic/Latino variable which was H02079 is now H02077.

G.1.B - Q3FY2019\PROGRAMS\ReportCards\CAHPS_AdultQ3FY2019\Convert.SAS - Convert Item Responses To Proportional Values

*****************************************************************************
* PROGRAM: CONVERT.SAS
* TASK: DOD HEALTH CARE SURVEY ANALYSIS (8687-330)
* PURPOSE: CONVERT ITEM RESPONSES TO PROPORTIONAL VALUES FOR CONSISTENCY
*           WITH THE TOPS SURVEY.
* WRITTEN: October 2000 BY ERIC SCHONE
* MODIFIED: October 2000 BY KEITH RATHBUN, Added PROLOG. Also, added DSN
*           to argument lists.
* INPUTS: 1) User-specified SAS Dataset
* OUTPUTS: 1) User-specified SAS Dataset with recoded values
* NOTES:
* 1) Arguments for the CONT1-CONT3 macros are as follows:
*    a) SAS dataset name (dsn)
*    b) Number of variables to be converted (num)
*    c) List of variables to be converted (y)
* 2) These macros assume that the response items have already been
   converted/recoded to CAHPS scales.
*****************************************************************************
* CONT1 - Convert big problem, small problem, not a problem questions to
*         proportional values.
*****************************************************************************
; %macro cont1(dsn=, num=, y=);
data &dsn(drop=i);
  set &dsn;
  array vars &y;
  do i = 1 to &num;
    if vars(i) ne . and vars(i) ne 3 then vars(i) = 0;
    if vars(i) = 3 then vars(i) = 1;
  end;
run;
%mend cont1;

*****************************************************************************
* CONT2 - Convert rating questions to proportional values.
*****************************************************************************
; %macro cont2(dsn=, num=, y=);
data &dsn(drop=i);
  set &dsn;
  array vars &y;
  do i=1 to &num;
    if vars(i) ne . and vars(i) < 8 then vars(i) = 0;
    if vars(i) in (8,9,10) then vars(i) = 1;
  end;
run;

G.14
%mend cont2;

****************************************************************************
* CONT3 - Convert Never, Sometimes, Usually, Always questions to
*    proportional values.
****************************************************************************
;
%macro cont3(dsn=, num=, y=);
data &dsn(drop=i);
   set &dsn;
   array vars &y;
   do i=1 to &num;
      if vars(i) ne . and vars(i) >= 2 then vars(i) = 2;
      vars(i) = vars(i) - 1;
   end;
run;
%mend cont3;

%cont3(dsn=, num=, y=);
Program: STEP2Q.SAS
Purpose: Generate risk-adjusted CAHPS Scores for Adult Report Card.

Requires: Program STEP1Q.SAS must be run prior to running this program.

The adult report card contains a large number of risk-adjusted scores.
Some scores are calculated from responses to individual survey questions.
Composite scores are calculated by combining scores from individual
questions. The scores then are compared with external civilian
benchmarks. The programming tasks involved in building the report
are:

1) Preparing data for analyses
2) Estimating risk adjustment models
3) Calculating risk-adjusted values and variances
4) Calculating benchmarks
5) Comparing risk-adjusted values to benchmarks
   and hypothesis testing

Previous Program: STEP1Q.SAS

Modified: 19) November 3, 2012 by Mike Rudacille, updated for handling of
Joint Service facilities
20) December 27, 2012 by Aimee Valenzuela, updated variable
names for Q1FY2013
21) December 1, 2014 by Matt Turbyfill, revised for the Macro
Program.

Change R14 to R&FY.
Inserted
..\..\ReportCards\CAHPS_Adult&FOLDER.&FYYEAR.\ as the filepath for all INC
files, including
REGSREG, RISKARRY, RISKMEAN, REGARRAY,
RISKVARS, MEANFILE, RISKARRY, RISKMEAN. Also for the FILE statements.
22) December 27, 2016 by Matt Turbyfill, revised for the SAS
Grid.

Changed filepaths to "Data".
Changed LIBRARY filepath to "&FMTPATH."
Backslashes changed to forward slashes for INC
files.
23) February 2, 2019 by Matt Turbyfill, Set the XSERVREG count
to a macro

Changed input lines on the SKELREG dataset

G.16
LIBNAME LIBRARY "&FMTPATH.";

G.1.D - Q3FY2019\PROGRAMS\ReportCards\CAHPS_AdultQ3FY2019\COMPOSIT.SAS - Calculate CAHPS Composite Scores - Run Quarterly

*****************************************************************************
* Project: DoD - Quarterly Adult Report Cards
* Program: COMPOSIT.SAS
* Purpose: Generate Quarterly Adult Report Card composite scores
* Requires: Programs STEP1Q.SAS and STEP2Q.SAS must be run prior
*           to this program.
* Modified: 1) December 1, 2014 by Matt Turbyfill, revised for the Macro Program.
*           Changed FILES filepath to
..\..\ReportCards/CAHPS_Adult\FOLDER.&FYYEAR./FILES.INC.
*           Change R14 to R&FY.
*           Added INFILE Data step removing BYVARs with only one occurrence.
*           2) December 27, 2016 by Matt Turbyfill, revised for the SAS Grid.
*           Corrected capitalization and backslashes on LIBNAME and INC filepaths.

G.34
G.2.A - Q3FY2019\PROGRAMS\LOADWEB\CAHPS_AdultQ3FY2019\LOADCAHQ.SAS - Convert CAHPS Scores into WEB layout - Run Quarterly

*****************************************************************************
* PROGRAM: LOADCAHQ.SAS
* TASK: Quarterly DOD HEALTH CARE SURVEY ANALYSIS (6244-410)
* PURPOSE: Convert the CAHPS Scores Database into the WEB layout
*
* WRITTEN: 11/09/2000 BY KEITH RATHBUN, Adapted from LOADCAHP.SAS.
*
* INPUTS: 1) CAHPS Individual and Composite data sets with adjusted scores
*
* OUTPUT: 1) LOADCAHQ.sas7bdat - Combined CAHPS Scores Database in WEB layout
*
* INCLUDES: 1) LOADCAHQ.INC - Format definitions for CAHPS Individual and composite data sets
*
* NOTES:
*
* 1) The following steps need to be run prior to this program:
*    - STEP1Q.SAS - Recode questions and generate group files
*    - STEP2Q.SAS - Calculate individual adjusted scores for group 1-7
*    - COMPOSIT.SAS - Calculate composite adjusted scores for group 1-8
*
* 2) The output file (LOADCAHQ.sas7bdat) will be run through the MAKEHTMQ.SAS program to generate the WEB pages.
*
* MODIFIED:
*
* 36) 3/5/2012 by Amanda Kudis - Changed libname IN and Year Macro Var for Q2.
* 37) 6/20/2012 by Amanda Kuis - Updated for Q3FY2012.
* 38) 8/23/2012 by Christine Cheu - Updated for Q4FY2012.
* 39) 12/27/2012 by Christine Valenzuela - Updated for Q4FY2012.
* 40) 03/23/2013 by Mike Rudacille - Updated for Q2FY2013.
* 41) December 1, 2014 by Matt Turbyfill, revised for the Macro Program.
*    Replaced RCTYPE with &PC.ReportCards.
*    Changed IN to "..\.\&RCTYPE\CAHPS_ADULT\&FOLDER.&FYYEAR.DATA".
*    Changed LOADCAHQ.INC to ..\.\LoadWeb\LOADCAHQ.INC.
*    Changed YEAR to &CYYEAR.
* 42) December 27, 2016 by Matt Turbyfill, revised for the SAS Grid.
*    Corrected capitalization and backslashes in LIBNAME and INC filepaths.
*
*****************************************************************************
* Assign data libraries and options
*****************************************************************************

G.2.B - Q3FY2019\PROGRAMS\LOADWEB\LOADCAHQ.INC - Format definitions for converting the Scores Database into the WEB layout - Run Quarterly

*****************************************************************************
*
* PROGRAM:  LOADCAHQ.INC
* TASK:     QUARTERLY DOD HEALTH CARE SURVEY ANALYSIS (6244-410)
* PURPOSE:  Format definitions for converting the CAHPS Scores Database
*           into the WEB layout.
* *
* WRITTEN:  11/09/2000 BY KEITH RATHBUN, Adapted from LOADCAHP.INC.
* *
* MODIFIED: 1) 08/13/2001 BY KEITH RATHBUN, Added XSERVAFF format to
*           accommodate the short reports.
*           2) 01/24/2002 BY KEITH RATHBUN, Added BENTYPF = 1998,1999,2000
*           added catchment composites.
*           3) 04/10/2002 BY KEITH RATHBUN, Added parameters for 2002
*           survey.
*           4) 04/03/2003 BY MIKE SCOTT, Added parameters for 2003 survey.
*           5) 07/08/2003 BY MIKE SCOTT, Added formats GETNCARE, GETCAREQ,
*           CRTSHHELP, HOWWELL, CUSTSERV, CLMSPROC, and PREVCARE.
*           6) 03/22/2004 BY KEITH RATHBUN, Added parameters for 2004
*           survey.
*           7) 05/06/2004 BY MIKE SCOTT, Changed R04031 back to 2003 version
*           of
*           the label ("Wait More than 15 Minutes Past Appointment") so
*           that
*           the Q1 2004 version of the question is consistent with past
*           versions. The label will be changed to the new version
*           ("Waiting
*           in the Doctor's Office") in Makehtmq.sas.
*           8) 02/06/2006 BY REGINA GRAMSS, Changed date format to fielding
*           dates.
*           9) 03/21/2006 BY KEITH RATHBUN, Added parameters for 2006
*           survey.
*          10) 08/22/2006 BY JUSTIN OH, Changed SERVREGF format for
*           Overseas.
*          12) 02/02/2007 BY JUSTIN OH, Added "s" in Healthy Behaviors in
*           VALUE BEN.
*          13) 01/10/2008 BY KEITH RATHBUN, Added parameters for 2008
*           survey.
*          14) 01/09/2009 BY MIKE RUDACILLE, Added parameters for 2009
*           survey.
*          15) 01/16/2009 BY MIKE RUDACILLE, Changed CONUS to USA.
*          16) 12/17/09 by Emma Ernst, Added parameters for 2010 survey.
*          17) 12/02/10 by MIKE RUDACILLE, Added parameters for 2011 survey.
*           Also removed 2000 parameters for space considerations.
*          18) 12/10/11 by Mike Rudacille, Added parameters for 2012 survey.
*           Also removed 2002 parameters for space considerations.
*          19) 11/03/12 by Mike Rudacille, Updated for handling of
*           Joint Service facilities

G.42
20) 12/27/12 by Aimee Valenzuela, Added parameters for 2013 survey.
21) 09/20/13 by Amanda Kudis, Added parameters for 2014 survey.
22) 12/12/17 by Matt Turbyfill, Combined North and South into East
   in REGIONF, SERVREGF and SERVREGO.
23) 02/12/19 by Irna May Connor, modified formats to accommodate 2-region updates.
   Joint Service replaced by DHA.
   New DHASRV format added.

* INPUTS: No direct input
* OUTPUT: No direct output
* NOTES: 1) Under the new contract (8860), the survey year was changed to be based on the year the survey is administered (2002) as opposed to the questioning reference frame (2001). This include file contains variable names for both the 2001 survey administration year and the the 2002 administration year surveys.

TASK:     Quarterly DOD HEALTH CARE SURVEY ANALYSIS (6244-410)
PURPOSE:  Adjust Adult CAHPS Benchmarks

WRITTEN:  June 2000 BY ERIC SCHONE

INPUTS:   1) BENCHA02.sas7bdat - Adult CAHPS Questions Renamed to be
           consistent with the MPR HCSDB Survey.
           2) GROUP8.sas7bdat - CAHPS Group8 (all beneficiaries) Dataset

OUTPUTS:  1) Benchmark Composite Scores Data Sets

MODIFIED:39) March 5, 2012 by Amanda Kudis - Changed libname in2 and
               include Convert.sas for Q2FY2012.
           * 40) June 20, 2012 by Amanda Kudis - Updated for Q3FY2012.
           * 42) December 27, 2012 by Aimee Valenzuela - Changed libname in in2
               and changed variable names.
           * 43) March 23, 2013 by Mike Rudacille - Changed libname in2 and
               include Convert.sas for Q2FY2013.
           * 44) September 20, 2013 by Amanda Kudis - Updated for Q1FY2014.
           * 45) July 8, 2014 by Hoa Le, Modified to use NCQA data.
           * 46) December 1, 2014 by Matt Turbyfill, revised for the Macro
               Program.
               Replaced RCTYPE with &PC.ReportCards
               Changed IN2 to "\.&RCTYPE\CAHPS_Adult&FOLDER.&FYYEAR\Data".
               Replaced MERGE statement in &Q._&L., &COMPNO._&I., and
               OUT.COMP&COMPNO._&I DATA steps with SET statements.
               Added MERGE=1 to R_&X.
               Added BY MERGE to TEMP step.
               Changed R14 to R&FY.
               Changed CONVERT.SAS to
               \.&\..\ReportCards\CAHPS_Adult&FOLDER.&FYYEAR\CONVERT.SAS
               47) August 24, 2016 by Matt Turbyfill, Now pulls benchmark data
               form the folder specified in the macro program.
               48) December 27, 2016 by Matt Turbyfill, revised for the SAS
               Grid.
               Corrected capitalization and backslashes on LIBNAME and INC
               filepaths.
               Changed LIBRARY to &FMTPATH.
               49) February 1, 2018 By Keith Rathbun - Definitions and data type
               for Disposition status (DISP)
               changed between the 2015 and 2017 NCQA benchmark files.
               Updated coded condition for keeping
               Complete and Eligible records to be DISP = 0 and ResponseMode
               = 1 (Mail) or 3 (Internet).

NOTES:

1) Run this program after BENCHA01.SAS and BENCHA02.SAS.
* 2) This program will generate the input for BENCHA04.SAS.
*

G.3.D.1 - Q3FY2019\PROGRAMS\BENCHMARK\QPREDTEST\SAS2STATA_Grps.sas - Converts the groups datasets from SAS to STATA - Run Quarterly

******************************************************************************
* PROGRAM:  SAS2STATA_Grps.SAS
* TASK:     Quarterly DOD HEALTH CARE SURVEY ANALYSIS (6401-904)
* PURPOSE:  Convert the CAHPS BENCHA02 and GROUP1-8 Files to STATA format
* WRITTEN:  01/11/2008 BY KEITH RATHBUN
* INPUTS:   1) BENCHA02.sas7bdat - CAHPS Benchmark Scores Database
*            GROUPi.sas7bdat - Group Files created by STEP1.SAS
*                           (where i = 1 -8 = group number)
* OUTPUTS:  1) BENCHA02.dta - CAHPS Benchmark Scores Database - STATA format
*            GROUPi.dta - Group Files created by STEP1.SAS - STATA format
*                           (where i = 1 -8 = group number)
* MODIFIED: 1) December 1, 2014 by Matt Turbyfill, revised for the Macro Program.
* Changed QUARTER to &FOLDER.&FYYEAR.
* Changed INBENCH to "&BENCHDATA."
* Changed INGROUP to ..//&PC.ReportCards/CAHPS_Adult&QUARTER./data.
* 2) December 27, 2016 by Matt Turbyfill, revised for the SAS Grid.
* Corrected capitalization and backslashes on LIBNAME and EXPORT filepaths.
* NOTES:

G.72
G.3.E - Q3FY2019\PROGRAMS\BENCHMARK\BENCHA04.SAS - Convert the Benchmark Scores Database into the WEB layout - Run Quarterly

*****************************************************************************
*
* PROGRAM:  BENCHA04.SAS
* TASK:     Quarterly DOD HEALTH CARE SURVEY ANALYSIS (6401-904)
* PURPOSE:  Convert the Benchmark Scores Database into the WEB layout
*
* WRITTEN:  06/01/2000 BY KEITH RATHBUN
*
* INPUTS:   1) Benchmark data sets with adjusted scores
*              (COMPn_i.sas7bdat where n = composite number and i = group number)
*
* OUTPUT:   1) BENCHA04.sas7bdat - Combined Benchmark Scores Database in WEB layout
*
* INCLUDES: 1) LOADCAHQ.INC - Format definitions for CAHPS Individual and composite data sets
*
* MODIFIED:38) 03/23/2013 by Mike Rudacille - Updated for Q2 FY 2013.
*           39) 09/20/2014 by Amanda Kudis - Updated for Q1 FY 2014.
*               40) December 1, 2014 by Matt Turbyfill, revised for the Macro Program.
*                      Change YEAR to &CYYEAR.
*                      Add X = .; statement to initialize X.
*                      Change R14 to R&FY.
*/
*           48) December 27, 2016 by Matt Turbyfill, revised for the SAS Grid.
*                      Corrected capitalization and backslashes on LIBNAME and INC filepaths.
*                      Changed LIBRARY to &FMTPATH.
*
* NOTES:
*
* 1) The following steps need to be run prior to this program:
*    - BENCHA01.SAS - Extract Benchmark variables
*    - BENCHA02.SAS - Recode Benchmark variables
*    - BENCHA03.SAS - Construct Scores and SEMEAN datasets
*
* 2) The output file (BENCHA04.SAS7BDAT) will be run through the MAKEHTML.SAS program to generate the WEB pages.
*

&PC.ReportCards

 Changed NORMDAT to &NORMFILE.
 Changed INDATA and YRDATA to
 
 &NORMFMTLIB.

 Changed first LIBRARY to
 Changed H11 to HANY.
 Changed H14 to H&FY.
 Removed line referencing
 JOINTSRV in the NORMDATA step. Added %DO loop declaring all
 values of SEMV&I. equal to 0.*
* 12/27/2016 by Matt Turbyfill, revised for the SAS Grid.
* Corrected capitalization and backslashes on
 LIBNAME and INC filepaths.
* Changed LIBRARY to &FMTPATH.
* 12/12/2017 by Matt Turbyfill, North and South changed to East-
 in REGIONF
* 02/17/2019 by Matt Turbyfill, XTNEXREG replaced by XTNEXRG2
 Joint service replaced by DHA
 JOINTSRV replaced bvy DHASRV
 East-North and East-South replaced by East
 USA definition changed accordingly with XTNEXRG2

PROGRAMS\REPORTCARDS\MPR_ADULTQ3FY2019\SMOKING_BMI.sas - Calculates Healthy Behavior Composite Scores - Run Quarterly

*****************************************************************************
* Project: DoD Reporting and Analysis 6077-410
* Program: SMOKING_BMI.SAS
* Purpose: Calculate Smoking Rate and Smoking Cessation
*            for each region-service affiliation and
*            conus-service affiliation groups.
* Date: 1/31/2005
* Author: Regina Gramss
* Modified: 38) 11/03/2012 By Mike Rudacille Updated for handling of Joint Service facilities
*            39) 12/28/2012 By Aimee Valenzuela Updated for Q1FY2013
*            40) 03/23/2013 By Mike Rudacille, Updated %LET DSN HCS132_2 and CURRENT January, 2013.
*            41) 09/20/2014 By Amanda Kudis, Updated for Q1FY2014.
*            42) 02/27/2014 By Amanda Kudis, Use XSERVAFF from database
*            43) 12/01/2014 By Matt Turbyfill, revised for the Macro Program.
*            44) December 27, 2016 by Matt Turbyfill, revised for the SAS Grid.
*            45) December 12, 2017 by Matt Turbyfill, North and South changed to East-
*            46) February 9, 2018 by Matt Turbyfill, Changed limitation for new benchmark data
*            46) August 5, 2019 by Matt Turbyfill, XTNEXREG replaced by XTNEXRG2
*            Joint Service replaced by DHA
*            JOINTSRV replaced by DHASRV
*            East-North and East-South replaced by East
*            TOTCON definition changed to match XTNEXRG2
* Inputs: 1) HCS11A_2.sas7bdat - Annual 2011 Survey data
*        2) HCS141_2.sas7bdat - Q1 fy 2014 Survey data
*        3) AC2011DB.sas7bdat - 2011 CAHPS Benchmark Data
* Output: 1) SMOKE.sas7bdat

G.5.B - Q3FY2019\PROGRAMS\LOADWEB\MERGFINQ.SAS - Merge the final CAHPS and MPR Scores Databases into the WEB layout - Run Quarterly

*****************************************************************************
* PROGRAM:  MERGFINQ.SAS
* TASK:     Quarterly DOD HEALTH CARE SURVEY ANALYSIS (6077-410)
* PURPOSE:  Merge the final CAHPS and MPR Scores Databases
*           into the WEB layout preserving the order of the FAKEQ.SD2.
* * WRITTEN:  11/09/2000 BY KEITH RATHBUN, Adapted from MERGFINL.SAS.
* * INPUTS:   1) MPR and CAHPS Individual and Composite data sets with
*           adjusted scores, and benchmark data for quarterly DoD HCS.
*           - LOADMPRQ.sas7bdat - MPR Scores Database
*           - LOADCAHQ.sas7bdat - CAHPS Scores Database
*           - BENCHCA04.sas7bdat - CAHPS Benchmark Database
*           - FAKEQ.sas7bdat - WEB Layout in Column order
* * OUTPUT:   1) MERGFINQ.sas7bdat - Combined Scores Database in WEB layout
* * INCLUDES: 1) LOADCAHQ.INC - Format definitions for CAHPS Individual
*           and composite data sets
* * MODIFIED:42) 11/03/2012 by Mike Rudacille - Updated for handling of
*              Joint Service facilities
* 43) 12/28/2012 by Aimee Valenzuela - Changed libname in2 and in3 for Q1FY2013.
* 44) 03/23/2013 by Mike Rudacille - Changed libname in2 and in3 for Q2FY2013.
* 45) 09/23/2013 by Amanda Kudis - Changed libname in2 and in3 for Q1FY2014.
* 46) 12/01/2014 By Matt Turbyfill, revised for the Macro Program.
*     Replaced RCTYPE with &PC.ReportCards
*     Replaced BCHTYPE with &PC.Benchmark
*     Changed IN2 to "CAHPS_ADULT&FOLDER\Data"
*     Changed IN3 to "..\RCTYPE\MPR_Adult&FOLDER.&FYYEAR."
*     Changed LOADCAHQ to ..\LoadWeb\LOADCAHQ.INC
* 47) December 27, 2016 by Matt Turbyfill, revised for the SAS Grid.
*     Corrected capitalization and backslashes on
*     LIBNAME and INC filepaths.
* 48) December 12, 2017 by Matt Turbyfill, North and South changed to East-.
* 49) February 17, 2019 by Matt Turbyfill, Changed number of
*     XSERVREG to macro
*     East-North and East-South replaced by East
* NOTES:
* * 1) The following steps need to be run prior to this program:
*    - STEP1Q.SAS - Recode questions and generate CAHPS group files

G.129
* - STEP2Q.SAS - Calculate CAHPS individual adjusted scores for groups 1-7
* - COMPOSIT.SAS - Calculate composite adjusted scores for group 1-8
* - PRVCOMPQ.SAS - Calculate MPR individual and composite scores
* - BENCHA01-04.SAS - Convert Benchmark Scores into WEB layout
* - LOADCAHQ.SAS - Convert Quarterly CAHPS Scores Database into WEB layout
* - LOADMPRQ.SAS - Convert Quarterly MPR Scores Database into WEB layout

2) The output file (MERGFINQ.SD2) will be run through the MAKEHTMQ.SAS program to generate the WEB pages.

PROGRAM: CONUS_Q.SAS

TASK: Quarterly DOD HEALTH CARE SURVEY ANALYSIS (6077-410)

PURPOSE: Generate CAHPS CONUS scores and perform significance tests.

WRITTEN: 11/13/2000 BY KEITH RATHBUN, Adapted from CONUS_A.SAS.

MODIFIED:
47) 11/03/2012 By Mike Rudacille - Updated for handling of Joint Service facilities
48) 12/28/2012 By Aimee Valenzuela - Changed %LET PERIOD1 - PERIOD4
49) 03/23/2013 By Mike Rudacille - Changed %LET LSTCONUS for Q1FY2013
50) 09/23/2013 By Amanda Kudis - Changed %LET PERIOD1 - PERIOD4
51) 12/01/2014 By Matt Turbyfill, revised for the Macro Program.
   Changed LSTCONUS to &LSTCONUS
   Changed PERIOD1-4 to &PERIOD1-4
   Changed EMPTY_PERIOD to &EMPTY_PERIOD
   In IN2.CONUS_Q step, rename BENEFIT to BENEFIT2, set BENEFIT to the first 28 characters of BENEFIT2, and drop BENEFIT2.
   Set KEY to format $200. in IN2.CONUS_Q and FAKEq steps.
52) December 12, 2017 by Matt Turbyfill, North and South changed to East-.
52) February 17, 2019 by Matt Turbyfill, Joint Service replaced by DHA
   East-North and East-South replaced by East
   REGCON renumbered
53) August 5, 2019, Pulled the 2019Q1 historical data from the Q1 run instead of Q2. This is because of the Purchased Care history issue.

INPUTS:
1) MERGFINQ.sas7bdat - Scores Database in WEB Layout
2) FAKEQ.sas7bdat - Scores Database WEB Layout
3) CONUS_Q.sas7bdat - Previous Quarters Combined CAHPS/MPR Scores Database in WEB layout

OUTPUT:
1) TOTAL_Q.sas7bdat - Combined CAHPS/MPR Scores Database in WEB layout
2) LT30Q.sas7bdat - Records with <= 30 observations
3) CONUS_Q.sas7bdat - Current Quarters Combined CAHPS/MPR Scores Database in WEB layout
1) The following steps need to be run prior to this program:
   - STEP1Q.SAS   - Recode questions and generate group files
   - STEP2Q.SAS   - Calculate individual adjusted scores for group 1-7
   - COMPOSIT.SAS - Calculate composite adjusted scores for group 1-8
   - LOADCAHPQ.SAS - Combine all questionnaire (CAHPS) scores together
   - PRVCOMPQ.SAS - Calculate preventative measure scores for group 1-8
   - SMOKING_BMI.SAS - Calculate healthy behaviors scores for group 1-8
   - LOADMPRQ.SAS - Combined preventative and healthy behaviors scores
   - MERGFINQ.SAS - Merge the final CAHPS and MPR Scores Databases

Assign data libraries and options

DoD - Quarterly Adult Report Cards

PROJECT: DoD - Quarterly Adult Report Cards
PROGRAM: STEP1Q.SAS
PURPOSE: Create Dummy and Recode Variables used in Adult Report Card

Create a Female dummy variable
Create an Education dummy variable
Create 15 region dummies combining regions.
7 & 8 into region 8. That is, there isn't a region 7 dummy.
Create 7 age dummy variables.

We require the most desired code to be the highest value.

Recode the dependent variables into:
1 - the least desirable value
2 - the 2nd least desirable value
3 - the most desirable value
. - missing

Create 7 variables GROUP1 - GROUP7

IF (XINS_COV IN (1,2,6) AND H09004>=2) THEN GROUP1 = 1
IF (XENR_PCM IN (1,2,6) AND H09004>=2) THEN GROUP2 = 1
IF (XENR_PCM = 3,7 AND H09004>=2) THEN GROUP3 = 1
IF XINS_COV IN (3) THEN GROUP4 = 1
                      /*JSO 08/24/2006, Deleted 4,5*/
IF XBNFGRP = 1            THEN GROUP5 = 1
IF XBNFGRP = 2            THEN GROUP6 = 1
IF XBNFGRP IN (3,4)       THEN GROUP7 = 1
GROUP8 is output for all beneficiaries

MODIFIED: 45) November 11, 2012 By Mike Rudacille, Updated for handling of Joint Service facilities
46) December 1, 2014 By Matt Turbyfill, revised for the Macro Program.

Replaced RCTYPE with &PC.ReportCards
Changed HCSyyq_2 to &DATAFILE.
Changed H14 and R14 to H&FY. And R&FY.
Changed numerous INCLUDE and FILE references to ..\..\ReportCards\CAHPS_Adult&FYYEAR.

INPUTS: 1) HCSyyq_1 - DoD Quarterly HCS Database

OUTPUTS: 1) GROUP1-8.sas7bdat - DoD Quarterly GROUP files as defined above

INCLUDES: 1) CONVERT.SAS - Convert item responses to proportional values for consistency w/ TOPS

NOTES: 1) Groups 1-3 modified 10/09/2000

2) In Q1_2002, S02S01 was renamed and recoded to H00077 (health status variable for 2000). H02077 was the Hispanic/Latino variable. In Q2_2002, H02077 is health status, and H02079
is the Hispanic/Latino variable. To make the Quarter 2 data file (HSC022_1.sd2) more consistent with the Quarter 1 file, the health status variable which was H02077 is now H04075, and the Hispanic/Latino variable which was H02079 is now H02077.

G.8.B - ReportCards\CAHPS_Adult2019\Convert.SAS - Convert Item Responses To Proportional Values

*****************************************************************************
* PROGRAM: CONVERT.SAS
* TASK: DOD HEALTH CARE SURVEY ANALYSIS (8687-330)
* PURPOSE: CONVERT ITEM RESPONSES TO PROPORTIONAL VALUES FOR CONSISTENCY
* WITH THE TOPS SURVEY.
* WRITTEN: October 2000 BY ERIC SCHONE
* MODIFIED: October 2000 BY KEITH RATHBUN, Added PROLOG. Also, added DSN
* INPUTS: 1) User-specified SAS Dataset
* OUTPUTS: 1) User-specified SAS Dataset with recoded values
* NOTES:
* 1) Arguments for the CONT1-CONT3 macros are as follows:
* a) SAS dataset name (dsn)
* b) Number of variables to be converted (num)
* c) List of variables to be converted (y)
* 2) These macros assume that the response items have already been
*    converted/recoded to CAHPS scales.
*****************************************************************************

%macro cont1(dsn=, num=, y=);
data &dsn(drop=i);
  set &dsn;
  array vars &y;
  do i = 1 to &num;
    if vars(i) ne . and vars(i) ne 3 then vars(i) = 0;
    if vars(i) = 3 then vars(i) = 1;
  end;
run;
%mend cont1;

%macro cont2(dsn=, num=, y=);
data &dsn(drop=i);
  set &dsn;
  array vars &y;
  do i=1 to &num;
    if vars(i) ne . and vars(i) < 8 then vars(i) = 0;
    if vars(i) in (8,9,10) then vars(i) = 1;
  end;
run;

G.171
*CONT3 - Convert Never, Sometimes, Usually, Always questions to proportional values.*
G.8.C - ReportCards\CAHPS_Adult2019\STEP2.SAS - Calculate CAHPS Adjusted Scores - Annual

/***************************************************************************
************
/*  Project:  DoD - 2004 Adult Report Cards
/*  Program:  STEP2Q.SAS
/*  Purpose:  Draft Adult Report Card
/*  Requires program STEP1.SAS to have been run
/*  Programming specifications for adult report card
/*  The adult report card contains a large number of
/*  risk-adjusted scores.  Some scores are
/*  calculated from responses to individual survey questions.
/*  Composite scores are calculated by
/*  combining scores from individual questions.
/*  The scores then are compared with external civilian
/*  benchmarks.  The programming tasks involved in building
/*  the report card are:
/*  1)   preparing data for analyses
/*  2)   estimating risk adjustment models
/*  3)   calculating risk-adjusted values and variances
/*  4)   calculating benchmarks
/*  5)   comparing risk-adjusted values to benchmarks
/*       and hypothesis testing
/*
/* Modified:13) November 11, 2012 by Mike Rudacille, updated for handling
of
/* Joint Service facilities
/* 14) December 1, 2014 By Matt Turbyfill, revised for the Macro
Program.
       Changed R14 to R&FY.
       Inserted
..\..\ReportCards\CAHPS_Adult&FOLDER.&FYYEAR.\ as the filepath for all INC
files,
           including REGRSREG, RISKARRY, RISKMEAN,
REGARRAY, RISKVARS, MEANFILE, RISKARRY, RISKMEAN.  Also for the three FILE
statements./*

G.8.D - ReportCards\CAHPS_Adult2019\COMPOSIT.SAS - Calculate CAHPS Composite Scores - Annual

***********************************************************************
* Project:  DoD - Quarterly Adult Report Cards
* Program:  COMPOSIT.SAS
* Purpose:  Generate Quarterly Adult Report Card composite scores
* Requires: Programs STEP1Q.SAS and STEP2Q.SAS must be run prior
* to this program.
* Modified: 12) 08/01/13 by Amanda Kudis, updated for 2013 database.
* 13) 12/01/2014 By Matt Turbyfill, revised for the Macro Program.
* Changed all FILE and INCLUDE filepaths to
* Changed R14 to R&FY.
* Added INFILE Data step removing BYVARs with
* only one occurrence.
***********************************************************************

**G.9.A - LOADWEB\LOADCAHP.SAS - Convert CAHPS Scores into WEB layout - Annual**

******************************************************************************
* PROGRAM: LOADCAHP.SAS
* TASK: 2007 DOD HEALTH CARE SURVEY ANALYSIS (6244-410)
* PURPOSE: Convert the CAHPS Scores Database into the WEB layout
* WRITTEN: 06/01/2000 BY KEITH RATHBUN
* MODIFIED: 1) 12/01/2014 By Matt Turbyfill, revised for the Macro Program.
   Changed IN to "..\&PC.REPORTCARDS\CAHPS_ADULT&FYYEAR./DATA".
   Changed LOADCAHQ to "..\LOADWEB\LOADCAHQ.INC"
   Changed YEAR to &FYYEAR.
   Changed R14 to R&FY.
   Inserted &FYYEAR. into TITLE1
* INPUTS: 1) CAHPS Individual and Composite data sets with adjusted scores
* OUTPUT: 1) LOADCAHP.sas7bdat - Combined CAHPS Scores Database in WEB layout
* INCLUDES: 1) LOADCAHQ.INC - Format definitions for CAHPS Individual and composite data sets
* NOTES:
  1) The following steps need to be run prior to this program:
     - STEP1.SAS - Recode questions and generate group files
     - STEP2.SAS - Calculate individual adjusted scores for group 1-8
     - COMPOSIT.SAS - Calculate composite adjusted scores for group 1-8
  2) The output file (LOADCAHP.sas7bdat) will be run through the MAKEHTML.SAS program to generate the WEB pages.
******************************************************************************
* Assign data libraries and options
******************************************************************************

G.9.B - LOADWEB\LOADCAHQ.INC - Format definitions for converting the Scores Database into the WEB layout - Annual

*****************************************************************************
* PROGRAM:  LOADCAHQ.INC
* TASK:     QUARTERLY DOD HEALTH CARE SURVEY ANALYSIS (6244-410)
* PURPOSE:  Format definitions for converting the CAHPS Scores Database into the WEB layout.
* WRITTEN:  11/09/2000 BY KEITH RATHBUN, Adapted from LOADCAHP.INC.
* MODIFIED: 1) 08/13/2001 BY KEITH RATHBUN, Added XSERVAFF format to accommodate the short reports.
*           3) 04/10/2002 BY KEITH RATHBUN, Added parameters for 2002 survey.
*           4) 04/03/2003 BY MIKE SCOTT, Added parameters for 2003 survey.
*           5) 07/08/2003 BY MIKE SCOTT, Added formats GETNCARE, GETCAREQ, CRTSHHELP, HOWWELL, CUSTSERV, CLMSPROC, and PREVCARE.
*           6) 03/22/2004 BY KEITH RATHBUN, Added parameters for 2004 survey.
*           7) 05/06/2004 BY MIKE SCOTT, Changed R04031 back to 2003 version of the label ("Wait More than 15 Minutes Past Appointment") so that the Q1 2004 version of the question is consistent with past versions. The label will be changed to the new version "Waiting in the Doctor's Office") in Makehtmq.sas.
*           8) 02/2006 BY REGINA GRAMSS, Changed date format to fielding dates.
*           9) 03/21/2006 BY KEITH RATHBUN, Added parameters for 2006 survey.
*          10) 08/22/2006 BY JUSTIN OH, Changed SERVREGF format for Overseas.
*          12) 02/02/2007 BY JUSTIN OH, Added "s" in Healthy Behaviors in VALUE BEN.
*          13) 01/10/2008 BY KEITH RATHBUN, Added parameters for 2008 survey.
*          14) 01/09/2009 BY MIKE RUDACILLE, Added parameters for 2009 survey.
*          15) 01/16/2009 BY MIKE RUDACILLE, Changed CONUS to USA.
*          16) 04/11/2009 by Mike Rudacille - Changed formats to reflect modifications to beneficiary reports necessary for V4
*          17) 12/17/09 by Emma Ernst, Added parameters for 2010 survey.
*          18) 12/02/10 by Mike Rudacille, Added parameters for 2011 survey. Also removed 2000 parameters for space considerations.
*          19) 12/10/11 by Mike Rudacille, Added parameters for 2012 survey. Also removed 2002 parameters for space considerations.
*          20) 11/03/12 by Mike Rudacille, Updated for handling of Joint Service facilities.

G.206
* 20) 12/27/12 by Aimee Valenzuela, Added parameters for 2013 survey.
* 21) 09/20/13 by Amanda Kudis, Added parameters for 2014 survey.
* 22) 12/12/17 by Matt Turbyfill, Combined North and South into East
* in REGIONF, SERVREGF and SERVREGO.
*
* INPUTS:   No direct input
* OUTPUT:   No direct output
* NOTES:   1) Under the new contract (8860), the survey year was changed
to be based on the year the survey is administered (2002)
as opposed to the questioning reference frame (2001). This
include file contains variable names for both the 2001
survey administration year and the the 2002 administration
year surveys.

**G.10.A - Benchmark\BENCHA03.SAS - Calculate CAHPS Benchmark data for HCSDB - Annual**

---

* PROGRAM:  BENCHA03.SAS  
* TASK:     Quarterly DOD HEALTH CARE SURVEY ANALYSIS (6244-410)  
* PURPOSE:  Adjust Adult CAHPS Benchmarks  
* WRITTEN:  June 2000 BY ERIC SCHONE  
* INPUTS:   1) BENCHA02.SD2 - 2005 Adult CAHPS Questions Renamed to be  
               consistent with the 2006 MPR DOD Survey.  
               2) GROUP8.SD2 - CAHPS Group8 (all beneficiaries) Dataset  
* OUTPUTS:  1) Benchmark Composite Scores Data Sets  
* MODIFIED:34) Aug 2, 2012 by Amanda Kudis - Updated for 2012 and removed  
               insurance restriction.  
               36) 12/01/2014 By Matt Turbyfill, revised for the Macro Program.  
                   Replaced RCTYPE with &PC.ReportCards  
                   Changed IN to &BENCHDATA.  
                   Changed IN2 to  
                   "../RCTYPE/CAHPS_Adult&FYYEAR./Data".  
                   Changed LIBRARY to ..../DATA/FMTLIB  
                   Replaced MERGE statement in &Q. &L.,  
                   OUT&COMPNO._&I., and OUT.COMP&COMPNO. &I DATA steps with SET statements.  
                   Added MERGE=1 to R &X.  
                   Added BY MERGE to TEMP step.  
                   Changed R14 to R&FY.  
                   Changed CONVERT.SAS to  
                   ../ReportCards/CAHPS_Adult&FYYEAR./CONVERT.SAS*  
* NOTES:  
* 1) Run this program after BENCHA01.SAS and BENCHA02.SAS.  
* 2) This program will generate the input for BENCHA04.SAS.  
*

G.10.B - Benchmark\BENCHA04.SAS - Convert the Benchmark Scores Database into the WEB layout - Annual

******************************************************************************
*
* PROGRAM:  BENCHA04.SAS
* TASK:     Quarterly DOD HEALTH CARE SURVEY ANALYSIS (6401-904)
* PURPOSE:  Convert the Benchmark Scores Database into the WEB layout
*
* WRITTEN:  06/01/2000 BY KEITH RATHBUN
*
* INPUTS:   1) Benchmark data sets with adjusted scores
*            (COMPl_n_i.SD2 where n = composite number and i = group number)
*
* OUTPUT:   1) BENCHA04.SD2 - Combined Benchmark Scores Database in WEB layout
*
* INCLUDES: 1) LOADCAHQ.INC - Format definitions for CAHPS Individual and composite data sets
*
* MODIFIED:
*
* NOTES:
*
* 1) The following steps need to be run prior to this program:
*    - BENCHA01.SAS - Extract Benchmark variables
*    - BENCHA02.SAS - Recode Benchmark variables
*    - BENCHA03.SAS - Construct Scores and SEMEAN datasets
*
* 2) The output file (BENCHA04.SAS7BDAT) will be run through the MAKEHTML.SAS program to generate the WEB pages.
*
* MODIFIED: 1) 12/01/2014 By Matt Turbyfill, revised for the Macro Program.
*       Changed LIBRARY to "..\..\DATA\fmtlib".
*       Changed YEAR to &FYYEAR.;
*       /*
*       Added X = .; statement to initialize X.
*       Changed R14 to R&FY.
*       */
******************************************************************************
*
* Assign data libraries and options
******************************************************************************

G.11.A - ReportCards\MPR_Adult2019\PRVCOMP.SAS - Calculate Preventive Care Composite Scores - Annual

******************************************************************
* Project:   DoD Reporting and Analysis 6077-410
* Program:   PRVCOMPQ.SAS
* Author:    Chris Rankin
* Date:      12/22/2000
* Modified:  4/19/2001 By Keith Rathbun: Restrict population to
*             xins_cov in(1,2,3,6). Use POSTSTR instead of
*             adj_cell.
* Modified:  1) 11/11/2012 By Mike Rudacille Updated for handling of
*             Joint Service facilities
*             2) 12/01/2014 By Matt Turbyfill, revised for the Macro Program.
*                              Replaced RCTYPE with &PC.ReportCards
*                              Changed INNORM to "&NORMDATA."
*                              Changed CACLIB to ..\CAHPS_Adult&FYYEAR.\Data
*                              Changed NORMDAT to &NORMFILE.
*                              Changed INDATA to &DATAFILE.
*                              Changed YRDATA to HCS&FY.
*                              Changed YR to &FY.
*                              Changed H11 to H&NY.
*                              Changed H14 to H&FY.;
*                              Added lines for "cp&yr.obs&p=.;" and
*                              Included DATA step in GETCORR to remove
* groupings with only one obs.*
* /
* Purpose:  Calculate MPR Preventive Care Composites
* Input:    HCSyyq_1.sas7bdat
* Output:   RFINAL.sas7bdat
*           CFINAL.sas7bdat
*           MFINAL.sas7bdat
*           SFINAL.sas7bdat
* * Include
* * Files:  LOADCAHPQ.INC
* * Notes:  Next program is Loadmprq.sas
* *

G.12 - ReportCards\MPR_Adult2019\TRENDMPR.SAS - Calculate Trend and Perform Significance tests on MPR Scores - Annual

******************************************************************
* Project:   DoD Reporting and Analysis 6244-410
* Program:   TRENDMPR.SAS
* Author:    Chris Rankin
* Date:      6/19/2000
* Modified: 1) 12/01/2014 By Matt Turbyfill, revised for the Macro Program.
           Changed YR to &FY.
           Changed EYR to %EVAL(&FY.-2)
           Changed IN&EYR to
           ...
           Programs\20&FY.\&PC.ReportCards\MPR_Adult20&FY.
           Renamed IN14 and IN12 to IN&FY. And IN&EYR.
           2) 08/09/2018 by Irna May Connor, Added "east-" prefixes to
           2016's data.
* Purpose:   Calculate trends from 2012 to 2014.
* Outputs:   RTREND.sas7bdat
*            MTREND.sas7bdat
*            CTREND.sas7bdat
*            STREND.sas7bdat
*            DTREND.sas7bdat
* Inputs:    RFINAL.sas7bdat
*            CFINAL.sas7bdat
*            MFINAL.sas7bdat
*            SFINAL.sas7bdat
*            DFINAL.sas7bdat
* Notes:     1) Next program is loadmpr.sas.
******************************************************************;

G.13.B - LOADWEB\MERGFINL.SAS - Merge the final CAHPS and MPR Scores Databases into the WEB layout - Annual

**************************
* PROGRAM:  MERGFINL.SAS
* TASK:     2007 DOD HEALTH CARE SURVEY ANALYSIS (6244-410)
* PURPOSE:  Merge the final CAHPS and MPR Scores Databases
*           into the WEB layout preserving the order of the FAKE.SD2.
* *
* WRITTEN:  06/07/2000 BY KEITH RATHBUN
* *
* MODIFIED: 1) 08/01/2013 BY AMANDA KUDIS: Updated to support the 2013
*              annual HCSDB.
* 2) 08/01/2014 BY AMANDA KUDIS: Updated to support the 2014
*              annual HCSDB.
* 3) December 1, 2014 By Matt Turbyfill, Revised for the Macro
* Program.
* Replaced RCTYPE with &PC.ReportCards
* Replaced BCHTYPE with &PC.Benchmark
* Changed IN03 to ..\..\Programs\&YEAR2.\&PC.LoadWeb
* Changed IN04 to ..\..\Programs\&YEAR2.\&PC.LoadWeb
* Changed IN05 to ..\RCTYPE\MPR_Adult&FYYEAR.
* Changed IN06 to ..\RCTYPE\MPR_Adult&YEAR2.
* Changed IN07 to ..\RCTYPE\MPR_Adult&YEAR1.
* Changed IN09 to ..\\ Programs\&YEAR2.\&BCHTYPE\data
* Changed IN10 to ..\\ Programs\&YEAR1.\&BCHTYPE\data
* Changed PERIOD2 to &YEAR2.
* Changed PERIOD1 to &YEAR1.
* Changed PERIOD to &FYYEAR.
* Renamed all all variables inding in 12, 13, or
14 to &FY2., &FY1., or &FY., respectively
* Inserted &FYYEAR into TITLE1
* *
* INPUTS:   1) MPR and CAHPS Individual and Composite data sets with
adjusted
* scores, and benchmark data for DoD HCS.
* - LOADMPR.sas7bdat - MPR Scores Databases
* - LOADCAHP.sas7bdat - CAHPS Scores Databases
* - BENCHA04.sas7bdat - CAHPS Benchmark Databases
* - FAKE.sas7bdat - WEB Layout in Column order
* *
* OUTPUT:  1) MERGFINL.sas7bdat - Combined Scores Database in WEB layout
* *
* NOTES: *
* 1) The following steps need to be run prior to this
*   - STEP1.SAS - Recode questions and generate CAHPS group files
* - STEP2.SAS       - Calculate CAHPS individual adjusted scores for groups 1-8
* - COMPOSIT.SAS    - Calculate composite adjusted scores for group 1-8
* - PRVCOMP.SAS     - Calculate MPR individual and composite scores
* - SMOKING_BMI.SAS - Calculate MPR smoking and BMI scores
* - BENCHAO1-04.SAS - Convert Benchmark Scores into WEB layout
* - LOADCAHP.SAS    - Convert CAHPS Scores Database into WEB layout
*
* 2) The output file (MERGFINL.SD2) will be run through the
* MAKEHTML.SAS program to generate the WEB pages.
*

**G.14 - LOADWEB\TREND_A.SAS - Calculate Trends for CAHPS scores - Annual**

*********************************************************************************************
* PROGRAM:  TREND_A.SAS
* TASK:     2007 DOD HEALTH CARE SURVEY ANALYSIS (6244-410)
* PURPOSE:  Add TREND records to Scores database.
* WRITTEN:  07/28/2000 BY KEITH RATHBUN
* MODIFIED: 1) 08/01/2013 BY AMANDA KUDIS -- updated for 2013 survey.
  2) 12/01/2014 By Matt Turbyfill, revised for the Macro Program.
      Changed first TIMEPD limitation to "&FYYEAR." 
      Changed second TIMEPD limitation to WHERE
      TIMEPD IN ("&YEAR2.","&FYYEAR.")
      Renamed all all variables inding in 12, 13, or
      14 to &FY2., &FY1., or &FY., respectively
      Inserted &FYYEAR into TITLE1
      Changed TEMP12 and 14 to TEMP&FY2. and &FY.
Also change limitations on datasets respectively to &YEAR2. and &FYYEAR.
* INPUTS:   1) CONUS_Q.sas7bdat - MPR and CAHPS Scores Database in WEB
            layout 
            2) FAKE.sas7bdat - Scores Database WEB Layout 
* OUTPUT:   1) TREND_A.sas7bdat - Combined Scores Database in WEB layout 
* NOTES:    
  1) All of the scores DB programs must be run and MERGFINL.SAS prior to
     running this program.  All report card records must be merged prior
     to the trend calculations (MERGFINL.SAS,CONUS_Q.SAS,TOTAL_A.SAS).
  2) The output file (TREND_A.sas7bdat) will be run through the
     MAKEHTML.SAS program to generate the HTML consumer reports.

This program was created with the transition to the SAS Grid in December 2016 by Matt Turbyfill. It was adapted from HCSDB_Bene_Report_Macro_Bath_Program.sas, which had been run on the SAS server. This program runs the programs comprising the first part of the bene reports. After running this program, Vartest.Do needs to be run in STATA for both Regular and Purchased Care. Next, run HCSDB_Bene_Report_Macro_Batch_Program2.sas.

Includes: HCSDB_Bene_Report_Macros.sas

* UPDATED: 8/28/03 FOR QUARTER 3 2003 BY NATALIE JUSTH
* UPDATED: 11/14/03 FOR QUARTER 4 2003 BY NATALIE JUSTH
* UPDATED: 05/18/2004 FOR QUARTER 1 2004 BY KEITH RATHBUN
* UPDATED: 06/30/2004 FOR QUARTER 2 2004 BY LUCY LU
* UPDATED: 06/30/2004 FOR QUARTER 3 2004 BY LUCY LU. CHANGING XREGION TO XTNEKREG.
* UPDATED: 10/07/2004 BY LUCY LU. ADD THE CODE TO COMPARE CONSUMER WATCH WITH REPORT CARDS IN SCORES AND SIGNIFICANCE.*
* MODIFIED 2/10/05 BY LUCY LU:
* 1). CREATE UNIVERSAL MACRO PROGRAM BASED ON PROGRAM CONSUMERWATCH-R.SAS
* TO ELIMINATE REDUNDANCY AND INCREASE THE EFFECTIVENESS OF PROGRAMMING.
* 2). ADD ADDITIONAL PREVENTION MEASURE "SMOKING CESSATION"
* INTO PREVENTIVE CARE TABLE.
* MODIFIED 06/2/2005 BY LUCY LU FOR Q1 2005:
* 1). REMOVE CHOLESTEROL MEASUREMENT AND ADD BMI MEASUREMENT
* 2). COMMENT OUT DISENROLL CODE--NO DISENROLL DATA IN Q1 2005
* 3). ADD SPECIALIST RATING.
* MODIFIED 11/16/2006 BY LUCY LU FOR FY Q4 2006
* ADD PURCHASE CARE VERSION-- CHANGE PRIME ENROLLEE TO Enrollees with Civilian PCM.
* MODIFIED 6/4/2007 BY LUCY LU. UNIFY THE MACRO PROGRAMS FOR CONSUMER WATCH.
* !! NEED TO DEFINE MACRO VARIABLE &POP IN SAS PROGRAMS:
* DIRECT CONSUMER WATCH: &POP='Prime Enrollees'
* PURCHASE CARE CONSUMER WATCH: &POP='Enrollees with Civilian PCM'
* MODIFIED 7/30/2007 BY LUCY LU
* UNIFY THE Period4 MACRO VARIABLES WITH BENEFICIARY REPORT CARDS PROGRAMS
* CURRNT ===> PERIOD4
* CURRTQ ===> PERIOD4Q
* PREV1 ===> PERIOD3
* PREV1Q ===> PERIOD3Q
* PREV2 ===> PERIOD2

H.5
* PREV2Q ===> PERIOD2Q
* PREV3 ===> PERIOD1
* PREV3Q ===> PERIOD1Q
* MODIFIED 5/11/09 BY LUCY LU
* 1. STARTING THIS QUARTER, THE DATA DOES NOT INCLUDE THE VALUE OF
*    'Courteous and Helpful Office Staff'. THE PROGRAM WILL DELETE
*    RELATED CODE.
* 2. DELETED MACRO VAR &VAL AND REPLACED BY EXISTING MACRO VAR
*    &AREA.
* MODIFIED 7/22/2010 BY LUCY LU
* 1. AUTOMATE PERIOD (QUARTER/YEAR) TO MINIMIZE POSSIBLE ERROR
* 2. ADD MACRO TO MINIMIZE EXCEL WAITING, REDUCE PROGRAM
*    RUNNING TIME
* 3. ELIMINATE UNNECESSARY MACRO VARIABLES PERIOD1Q-PERIOD4Q AND
*    CONSOLIDATE MACRO PROGRAM
* 4. REPLACE MACRO VAR &POP WITH 'Prime Enrollees'.
* MODIFIED 4/8/2014 BY LUCY LU
* MODIFIED CODE FOR 508 COMPLIANCE
* 1. CREATE NEW VAR WITH ASTERISK FOR FIGURES 1-4
* 2. CREATE NEW VAR WITH ASTERISK FOR PREVENTIVE CARE TABLE
* 3. RECODED ALL MISSING DATA TO DASH '-'
* MODIFIED 3/16/2015 BY LUCY LU, RECODED 9999 TO MISSING
* RECODED Q4 DATA--WAS MISSING IN THE PREVIOUS REPORT BUT CHANGED
* 9999 THIS QUARTER THUS ARTIFICIALLY INFLATE VALUE IN THE CHARTS
* MODIFIED 7/26/2016 BY KATHY BENCIO, REMOVED * FROM VALUES
* MODIFIED 3/21/2019 BY LUCY LU
*    -- CHANGED TO CREATE THE MACRO-ENABLED EXCEL TABLES

  * Watch report.
*
* DATE : 03/31/2009
*
* OUTPUT : WORD DOCUMENTS
* MODIFIED: 04/12/2010 BY LUCY LU
  * 1. Charts in Word are linked to Excel and automated updated once
  * Excel
  * code in SAS.
  * 3. The final product is in pdf format. Word report is
  * intentionally
  * unsaved to reserve bookmarks.
* MODIFIED: 06/4/2010 BY LUCY LU
  * 1. Replicating the template of Q2 2010 report found the lower
  * quality
  * of charts in Word report. Using copy and paste instead of
  * link.
* MODIFIED 7/23/2010 BY LUCY LU
  * ADD MACRO TO MINIMIZE EXCEL AND WORD WAITING, REDUCE PROGRAM
  * RUNNING TIME
* MODIFIED 2/25/2013 BY LUCY LU
  * ADD NEW FILE TO READ RESPONSE RATE FOR JOINT SERVICE
* MODIFIED 4/8/2014 BY LUCY LU, MOD FOR 508 COMPLIANCE
  * -- COMMENTED OUT FONT & SIZE, USING STYLE IN WORD
* MODIFIED: 9/21/2016 BY LUCY LU,
  * -- PRODUCE WORD FILE ONLY, DONT NEED PDF REPORT
* MODIFIED: 2/14/2017 BY LUCY LU,
  * -- CHANGED DOMAIN=USAMHS
* MODIFIED: 3/21/2019 BY LUCY LU,
  * -- CHANGED TO COPY THE MACRO-ENABLED EXCEL TABLES
  * -- CHANGED THE RR DATA TO XTNEXRG2, DHAFLAG

H.3  Q2FY2019\Programs\ConsumerWatch\APPENDIX.SAS - Run the appendix for the quarterly reports (Q1 & Q2)

RESETLINES;
*=========================================================================*
PROJECT : HCSD Consumer Watch
PROGRAM  : APPENDIX.SAS
WRITTEN : LUCY LU
DESCRIPTION : CREATE APPENDIX TABLES WITH 508 COMPLIANCE FOR CONSUMER WATCH REPORT

DATE : 03/22/2014

MODIFIED : 1/28/2015 BY LUCY LU. UPDATED THE PATH AFTER MOVING TO SAS SERVER
MODIFIED : 8/04/2016 BY LUCY LU. USING a, b SYMBOLS AND DIFFERENT COLORS TO HARD CODE THE APPENDIX TABLE
MODIFIED : 8/30/2016 BY LUCY LU.
- FILL HEADER FOR Q/FY COLUMN
- REMOVE THE TITLE ON OUTPUT PDF REPORT
MODIFIED : 9/21/2016 BY LUCY LU.
- CREATE OUTPUT WITH RTF FORMAT
*=========================================================================*

SAS CODE FOR 2019 TRICARE PURCHASED CARE CONSUMER WATCH – QUARTERS I-III
PAGE IS INTENTIONALLY LEFT BLANK TO ALLOW FOR DOUBLE-SIDED COPYING
I.1.A  Q2FY2019\Programs\PurchasedConsumerWatch\consumerwatch_PurchasedCare.sas - Run Purchased Care TRICARE Consumer Watch reports (Q1 & Q2)

****************************************************************
*****
* PROJECT: 6077-420
* PROGRAM: CONSUMERWATCH_PurchasedCare.SAS
* PURPOSE: CALL CONSUMERWATCH MACRO PROGRAM
* TO PRODUCE EXCEL TABLE FOR PURCHASED CARE REPORT.
*
* WRITTEN: 02/10/2005 BY LUCY LU FOR Q4 2004.
*
* UPDATE: 04/04/2006 FOR Q2 FISCAL YEAR 2006, LUCY Lu. STARTING THIS QUARTER,
* THE PERIOD IS CHANGED TO FISCAL YEAR.
* UPDATE: 09/01/2006 Lucy Lu FOR FY 3 2006.
* UPDATE: 10/05/2006 Lucy Lu FOR FY 4 2006.
* MODIFIED 7/30/2007 BY LUCY LU
* UNIFY THE PERIOD MACRO VARIABLES WITH BENEFICIARY REPORT CARDS PROGRAMS
*
* MODIFIED 8/29/2007 BY LUCY LU TO RUN CONSUMERWATCH_MACRO_COMB.INC
* STARTING Q4 2007 CONSUMERWATCH_R(REGION) AND CONSUMERWATCH_CONUS
*
* MODIFIED 5/14/09 BY LUCY LU
* 1. MACRO INCLUDE PROGRAM IS MODIFIED BY REMOVING THE VALUE OF 'Courteous and Helpful Office Staff'. THE PROGRAM WILL DELETE RELATED CODE.
* 2. THE EXCEL AND WORD TEMPLATES ARE MODIFIED TO REMOVE THE CHARTS FOR 'Courteous and Helpful Office Staff'.
* MODIFIED 7/23/2010 LUCY
* Rename CONSUMERWATCH_MACRO_COMB.INC to
* CONSUMERWATCH_PurchasedCare_MACRO.INC
* MODIFY MACRO VARIABLES TO REFLECT THE CHANGE OF INCLUDE MACRO PROGRAM. SEE consumerwatch_PurchasedCare_macro.inc FOR DETAILS.
* 1. CONSOLIDATE USMHS AND REGION PROGRAMS INTO ONE SAS PROGRAM.
* 2. REPLACE PERIOD MACRO VARIABLES WITH CURRENTQ AND CURRENTY.
* MODIFIED: 3/21/2019 BY LUCY LU
* -- CHANGED TO COPY THE MACRO-ENABLED EXCEL TABLES
*
* INPUT : DATA FROM CONSUMER REPORTS:
..\..\PROGRAMS\&DAT.LOADWEB\TOTAL_Q.SD2
*
* OUTPUT : INTO EXCEL SPREADSHEET

* UPDATED: 11/14/03 FOR QUARTER 4 2003 BY NATALIE JUSTH
* UPDATED: 05/18/04 FOR QUARTER 1 2004 BY KEITH RATHBUN
* UPDATED: 06/30/2004 FOR QUARTER 2 2004 BY LUCY LU
* UPDATED: 06/30/2004 FOR QUARTER 3 2004 BY LUCY LU. CHANGING XREGION TO XTNEXREG.
* UPDATED: 10/07/2004 BY LUCY LU. ADD THE CODE TO COMPARE CONSUMER WATCH WITH REPORT CARDS IN SCORES AND SIGNIFICANCE.*
* MODIFIED 2/10/05 BY LUCY LU:
* 1). CREATE UNIVERSAL MACRO PROGRAM BASED ON PROGRAM CONSUMERWATCH-R.SAS
* TO ELIMINATE REDUNDANCY AND INCREASE THE EFFECTIVENESS OF PROGRAMMING.
* 2). ADD ADDITIONAL PREVENTION MEASURE "SMOKING CESSATION" INTO PREVENTIVE CARE TABLE.
* MODIFIED 06/2/2005 BY LUCY LU FOR Q1 2005:
* 1). REMOVE CHOLESTEROL MEASUREMENT AND ADD BMI MEASUREMENT
* 2). COMMENT OUT DISENROLL CODE--NO DISENROLL DATA IN Q1 2005
* 3). ADD SPECIALIST RATING.
* MODIFIED 11/16/2006 BY LUCY LU FOR FY Q4 2006
* ADD PURCHASE CARE VERSION-- CHANGE PRIME ENROLLEE TO Enrollees with Civilian PCM.
* MODIFIED 6/4/2007 BY LUCY LU. UNIFY THE MACRO PROGRAMS FOR CONSUMER WATCH.
* !! NEED TO DEFINE MACRO VARIABLE &POP IN SAS PROGRAMS:
* DIRECT CARE CONSUMER WATCH: &POP='Prime Enrollees'
* PURCHASE CARE CONSUMER WATCH: &POP='Enrollees with Civilian PCM'
* MODIFIED 8/30/2007 BY LUCY LU
* 1). COMBINE CONSUMERWATCH-MACRO.INC and CONSUMERWATCH-MACRO_PURCHASE.INC
* PRODUCE CHARTS CONTAINING BOTH DIRECT CARE AND PURCHASE CARE DATA
* 2). CREATE DUMMY ID FOR MERGE. SAS 9 doesn't allow merge without by variable...
MODIFIED 9/4/2007 BY LUCY LU. START Q4 2007,
DIRECT CARE CONSUMER WATCH &POP='Enrollees with Military PCM'
MODIFIED 5/14/09 BY LUCY LU
  1. MACRO INCLUDE PROGRAM IS MODIFIED BY REMOVING VALUE OF
     'Courteous and Helpful Office Staff'. THE PROGRAM WILL DELETE
     RELATED CODE.
  2. THE EXCEL AND WORD TEMPLATES ARE MODIFIED TO REMOVE THE CHARTS
     FOR 'Courteous and Helpful Office Staff'.
MODIFIED 7/23/2010 BY LUCY LU
  1. AUTOMATE PERIOD (QUARTER/YEAR) TO MINIMIZE POSSIBLE ERROR
  2. ADD MACRO TO MINIMIZE EXCEL WAITING, REDUCE PROGRAM
     RUNNING TIME
MODIFIED 4/14/2014 BY LUCY LU
  MODIFIED CODE FOR 508 COMPLIANCE
  1. CREATE NEW VAR WITH ASTERISK FOR FIGURES 1-4
  2. CREATE NEW VAR WITH ASTERISK FOR PREVENTIVE CARE TABLE
  3. RECODED ALL MISSING DATA TO DASH '-'
MODIFIED 3/21/2019 BY LUCY LU
  - CHANGED TO PRODUCE THE MACRO-ENABLED EXCEL TABLES

I.3 Q2FY2019\Programs\PurchasedConsumerWatch\PurchasedCare_APPENDIX.sas - Run appendix for Purchased Care TRICARE Consumer Watch reports (Q1 & Q2)

RESETLINES;
*===================================
PROJECT : HCSDB Consumer Watch-Purchased Care
PROGRAM : PurchasedCare_APPENDIX.SAS
WRITTEN : LUCY LU
DESCRIPTION : CREATE APPENDIX TABLES WITH 508 COMPLIANCE FOR CONSUMER WATCH REPORT

DATE : 04/18/2014
MODIFIED : 8/10/2016 BY LUCY LU. USING a, b SYMBOLS AND DIFFERENT COLORS
TO HARD CODE THE APPENDIX TABLE
MODIFIED : 8/30/2016 BY LUCY LU, THE CHANGE MADE TO MEET 508 REQUIREMENT
- FILL HEADER FOR Q/FY COLUMN
- REMOVE THE TITLE ON OUTPUT PDF REPORT
- REMOVE THE EMPTY ROWS IN PROVENTIVE CARE TABLE
MODIFIED : 9/21/2016 BY LUCY LU.
- CREATE OUTPUT WITH RTF FORMAT
===================================
