1.05.02	10/4/2012	W. Funk	• Table 1	• Updated transformations for several fields • Added several fields
1.05.03	10/24/2012	J. MacLeod	• Table 1	• Modified the M2 Derivation for GPCI_PPS_WORK, GPCI_PPS_PE, PPS_RVU_FAC, and PPS_APC_FAC to note that it will only be populated for FYs 2010 and later and will be zero-filled for years prior to FY10. • Populated the MDR SAS names for variables that had TBD.
1.06.00	02/10/2015	J. MacLeod	• Section III • Table 1	• Added a "LINE" row to each FY of data. • Switched UBU_SVC to FINSVC for the DMIS ID Military Service • Set to blank or zero variables that are no longer on the MDR DMIS ID data and must now be either zero-filled or blank-filled for the M2 feed. • Fixed footnote to describe all variables set to specific values for the additional line in the file.
1.07.00	05/22/2015	J. MacLeod	• Table 1	• Table 1: Set to zero variables the APGMTF and APGPEER variables because they are no longer on the MDR DMIS ID data. • Modified logic for the DMIS ID Name variable
1.08.00	04/28/2016	J. MacLeod	• Table 1	• Table 1: Increased the length of the T3 Region variable from $1 to $2. The increase in size is due to the expansion of the "O" value to "OE","OL","OP", and "O".

1.09.00	04/19/2017	J. MacLeod	• Table 1	• Table 1: Removed the RVUMC, RVUCIV, RVUMTF, RVUPEER, RWPMC, RWPCIV, RWPMTF, and RWPPEER variables because they are no longer on the MDR DMIS ID data. Default values of 0 will be used as placeholders to maintain the layout of the extract. • Deleted the references to norms in footnote 1.
1.10.00	5/3/2017	J. MacLeod	• Tables 1, 2 & 4	• Tables 1, 2 & 4: Changed the variable names for APG variables to eliminate the APG portion of the name.
1.11.00	08/30/2017	W. Funk & J. MacLeod	• Table 1	• Added T3 and T17 Regions and the inpatient and ambulatory peer groups to the end of the extract • Set the peer group to blank and added direction for it to be hidden.
1.12.00	06/05/2018	J. MacLeod	• Table 1	• The MDR DMIS ID Index table converted from four quarters of APC and RVU conversion factors to CY-based conversion factors. Now the Q1 conversion factors are set to the CY1 values and the Q2-Q4 conversion factors are set to the CY2 values.
1.13.00	06/11/2018	J. MacLeod	• Table 1	• The MDR DMIS ID Index table converted from one CMS Work GPCI and one CMS PE GPCI to two, CY-based GPCIs. So the CMS Work and PE GPCIs will be set to the CY2 value for this version.

VI. Application of DMIS ID Attributes to M2 Tables: In many of the M2 data tables, attributes of DMIS IDs are visible to users, even though in many cases, the attributes are not provided in the individual data feeds to M2. These DMIS ID attributes are made available by joining the DMIS ID table to the individual data tables in M2, by matching fiscal year and DMIS ID. This section describes the standardized variable names and methods for applying DMIS ID Attributes in M2. Each time a DMIS ID table feed is provided to the M2, the DMIS ID attributes must be made available to users with the refreshed data. The basic attribute types and the fields to use to join the DMIS ID data are described in tables 3-5.
